> And that one being Atari, no doubt. :-)

Of course it's an Atari virus. That's why it's posted in the Atari 8-bit sig...?

But there is one lone virus for the 8-bit that I know of.. and it supposedly turns the computer into a doorstop. Chris Karson of the Blues Brothers BBS in Ottawa had it in his files section when he ran the board a number of years ago..

That would be the only affective virus on the Atari because most of us, by now, have three of four copies of all of our software lying around somewhere and all you have to do to stop the virus is just shut off the computer.

That sounds suspiciously like the april fools article and program that ran
in one of the magazines (A.N.A.L.O.G.?) in 1986 or so. It was a joke that
make the computer look like it was getting trashed. It was cute, but
apparently many people didn't think it was funny. I did.

That was a joke program, not a virus.

2904. clock speed?

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-19 00:00:00 UTC
From: rwilmott@mars.superlink.net
Message-ID: <rwilmott-1905962153570001@c32.superlink.net>
Source record: 83831

Easy question for someone up on their atari 8-bit trivia :

What's their clock speed? (I seem to recall that NTSC and PAL versions were of slightly different speeds, and for some reason the number 1.59 comes to mind.)

Thanks!

| Ray Wilmott http://mars.superlink.net/rwilmott/ |

2905. a lot of old 8-bit stuff for sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-19 00:00:00 UTC
From: Donald Fields <fields@pop.unb.ca>
Message-ID: <319FD9B9.2C5F@pop.unb.ca>
Source record: 83832

I have a couple STs and several Atari 8 bits (800s, 800xls, 1200, 130xes), drives, interfaces, software, docs, accessories, programming manuals, magazines (almost all for a number of years). If anyone is seriously interested in buying the lot then reply by email with what you think might be a reasonable range for some of these items. I will then do an inventory and reply. I'm only interested in disposing of it all in one swoop.

I'm really surprised to read these comments, considering the wonderful original titles developed by EA for the 400/800: Archon and M.U.L.E. Seven Cities of Gold was exceptional as well. These titles were made *FIRST* for the Atari 400/800, and only later adapted to the C64.

More than a few people I know still keep their Atari 800 around for doing M.U.L.E. playing at parties, although some of that's sentimental feelings rather than actual game playing motivating them to keep the system around.

The failure of the 400/800 market had to do with the growing business in C64 products along with (in my opinion) Atari's abysmal failure to deal with that competition. If EA promised some 400/800 titles and failed to deliver, it has more to do with Atari than EA. Unfortunately, the same can be said for Commodore with the Amiga. EA sunk a lot of development money into the Amiga but hints about a sub-$500 computer didn't materialize until it was too late for the Amiga to make a full-on hit of the Amiga as a game machine.

Game players are sensitive about not only features but price point. Atari got left in the dust by Commodore, then Commodore lost market share to PC clones. It's unfair to blame EA for abandoning failing markets after investing so much and delivering such great products.

Cross-posted to: comp.sys.cbm,comp.sys.ti,comp.sys.apple2,comp.sys.apple2.marketplace,comp.sys.amiga.software,comp.sys.atari.8bit,comp.sys.mac.games.marketplace,misc.forsale.computers.other.software,misc.forsale.computers.mac-specific.software

I am posting this message for a friend without Internet access.

ALL SOFTWARE PACKAGES ARE ORIGINALS WITH COMPLETE DOCS, DISKS, AND BOXES, unless noted with a * which means there is no box. All opened disks have been tested and I will guarantee they work.

Rather than post separate for sale messages for each computer as I have done in the past, I thought I'd combine them into one large list so people could see everything I have available. If you are interested in anything, please read the end of the message before replying.

Items listed in this order:
Part 1. Commodore 64/128 game software (lots), datasette
Part 2. Amiga 3.5" game software (4 games)
Part 3. Apple II+/e business software, MIDI interface
Part 4. Atari ST and 8-bit software (no games)
Part 5. Macintosh 3.5" software (several games)
Part 6. TI-99/4A cartridges (2 educational)
Part 7. DBase II/III computer books (several)

Feel free to make reasonable offers on anything below. Few prices are firm, especially if you are buying several other items.

=== Part 1. Commodore 64/128 (all 5.25" disks) ================================

$2.50 each

Deceptor
Force 7
GEOS Desk Pack I *
Sky Runner

$3.50 each

Blue Angels
Die Hard
Oil Barons (big and heavy package)
Paperclip 64 *
Paperclip Spell Pack *
PHM Pegasus
Print Power (+Atari)
Top 20 Solid Gold (Cosmi) *
Top Fuel Eliminator
TV Sports Football

X-15 Alpha Mission

$4.50 each

Ace of Aces
Beyond Dark Castle *
Beyond Zork 128 *
Border Zone *
Defender of the Crown
Grave Yardage *
Kings of the Beach *
Millionaire *
Monopoly (Leisure Genius)
Murder by the Dozen *
Nord and Bert *
Pipe Dream *
Tomahawk

=> If you buy all of the C64 software, I will take 50 cents off per package
and ship for free if you don't want the boxes (not all items have the box
anyway). For everything but Oil Barons, that would be $90 delivered.

Hardware:
Commodore 64/PET Datasette.....$7

=== Part 2. Amiga 3.5" disks ==========

$4.50 each

Jack Nicklaus' Golf *
Midwinter
Pioneer Plague *
Warlock

=== Part 3. Apple II+/e (all 5.25" disks) ==========

Hardware: Apple-brand MIDI interface with cables (plugs into ADB port) - $16

ORIGINAL DISKS ONLY for 15 different PFS:File, PFS:Graph, PFS:Write, etc -
50 cents ea. disk - can provide a complete list if interested

Tons of Beagle Brothers Time-Out disks and manuals (no boxes) - DeskTools,
DeskTools II, Filemaster, Graph, MacroTools, MacroTools II, PowerPack,
Quickspell, Report Writer, Sidespread, SpreadTools, Superfonts, Thesaurus,
Ultramacros, Super Macroworks. If anyone is seriously interested in buying
the WHOLE LOT, please respond with your offer. Maybe I'm out of line, but
since these are valuable Appleworks utilities IMO, I was thinking around
$5 each. Correct me if they can be found elsewhere for less.

Many issues of a specialty Apple magazine called "The Assembly Line". I can
provide a more complete list of issues if someone is seriously interested.

=== Part 4. Atari ==========

Atari ST 3.5" software - $2 each
E-Z Track MIDI Sequencer - new, unopened (2 of them)
Personal Pascal *
ST Key *

Atari 8-bit 5.25" software - $3 each
Atariwriter (cartridge) *
Home Filing Manager (disk) *
Pilot language (cartridge) *
Print Shop (disk) *
Telelink (cartridge) *
Turtle Tracks (disk)

Also looking for Clowns & Balloons game disk -- will trade

=> Take all 4 Atari ST and 6 Atari 8-bit packages above for $20 + shipping

=== Part 5. Macintosh 3.5" disks ==

$2.50 each

Crimson Crown
Enchanted Scepters
Frogger (untested -- it may only run on a Mac 512K or possibly a Plus,
neither of which I have access to; disk seems error-free)
Ground Zero
Mastertype
Rival 1.1.4 (not a game)
Time and Magik

$3.50 each

Click Change 1.04 (not a game)
Corruption
Deja Vu

$4.50 each

Mac Plot, standard V3.4 (not a game)
Pools of Radiance
Status Mac - 1991, System 7 compatible, unopened (not a game)

Strategic Conquest Plus - disks only - $1.50

Note: Some of these games are old and may only run on older Macintoshes
with System 6 or earlier.

=> Take all Macintosh software above for $42 + shipping.

=== Part 6. TI-99/4A ==

Working cartridges - no boxes

$3 each

Beginning Grammar, no docs
Household Budget Management, w/ docs

Cartridges WANTED (will also trade the above for or possibly buy):
Beyond Parsec, Bigfoot, Computer War, Jumpman Jr., Space Journey,
Spy's Demise, Star Maze, and Tris.

=== Part 7. Books ==

I have too many DBase books and would like to sell all but a couple of the
following. I've never used any of them (and probably never will), so as long
as I keep a couple decent books on DBase III Plus I would be happy to sell
the rest. If any of them interest you, please make an offer on each.

Advanced DBase III Plus Programming and Techniques by Miram Liskin
Advanced Programmer's Guide to DBase II and III by Luis Castro
Advanced Techniques in DBase II by Alan Simpsons
Advanced Techniques in DBase III by Alan Simpson
Command Performance DBase II by Douglas Hergert
DBase III Plus & Local Area Networks by William Bates
DBase III Plus Programmer's Library by Joseph-David Carrabis
DBase III Plus To Go by Peter Randall
Everyman's Database Primer Featuring DBase II by Robert Byers
Expert DBase III Plus by Judd Robbins
Programming with DBase II by Cary Prague
Understanding DBase III Plus by Alan Simpson
Using DBase II by Carl Townsend

==

The above prices do not include shipping. I'm in California. Depending on
how far away you are, how many items you want, if they have boxes, and how
heavy everything is, the shipping cost usually ranges from $4 to $8 UPS or
priority US mail. I don't have time to deal with lots of small transactions,
so I need to ask a minimum of $15 worth of items. If you buy a lot of stuff
at once, I will make you a deal on the shipping. In general, a few pieces of
software cost $4 or $5 to ship.

I will only ship within the continental UNITED STATES.

Thank you,
Randall

Please send e-mail to steven@rain.org and include at the top of the message
or in the subject header: "Forward to Randall". Because these messages will
be hand-carried on floppy disk or sent to me via modem only once or twice
per week, it may take me a little while to respond.

Ok.. minus that one, then.. I guess there probably aren't any. I'll be
damned if someone's got an infected Atari, cause there have been VERY VERY
few Atari viruses.

2911. C compilers

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-20 00:00:00 UTC
From: Fabrice Frances <frances@ensica.fr>
Message-ID: <31A03B83.30EEAC5C@ensica.fr>
Source record: 83838

Hi, as a 6502 fan, I hope you won't flame me for being an Oric user.
It seems you had more luck than us regarding software, is there a *good* C compiler in the Atari 8-bit world ? I'm looking for a native or cross-compiler (PC hosted) producing really good 6502 code. Do you know one ?
I have already seen some tiny-C compilers, producing "semi-compiled" code, sort of a stack machine interpreter, so I don't like this very much.
Also, I have written a back-end for LCC, producing 16 bits macros for the 6502, the code is rather optimized and run already fast on a 1 MHz 6502,
but I dream of a real *eight* bits compiler (with 8-bits integers, 16-bits long integers and pointers), and LCC's front end won't allow this without a lot of modifications. So, instead of re-inventing the wheel, I was thinking
Atari friends may already have such a nice thing 8-)

PS: If you can Carbon-Copy your answers to my e-mail, it would be nice too...
c.s.a.8 is much more crowded than c.s.oric ;-)

I assume you are using a PC as you mention XFormer.
You can directory .XFD and .ATR disks using various
utilities that can be found on my web page.

ADIR allows directory listing of .XFD/.ATRs containing
AtariDOS/MyDOS.

IMAGEMAN allows the above but with extra features like
creating/adding/deleting/extracting etc.

Many TVs have composite color inputs now. I like the portable I saw at
Fry's Electronics last week for 150 bucks that has the inputs on the
FRONT of the TV! I'm asking for that one for my birthday next month. They
work well with most Atari software, because most Atari software allows
(and in some cases, depends on) the overscan designed into most TVs.

$7 for one or $12 for two, shipping included

2917. Trying to copy Atari 800 10K OS ROM

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-20 00:00:00 UTC
From: "David S. Bennahum" <davidsol@panix.com>
Message-ID: <31A0DC6D.58D3@panix.com>
Source record: 83844

I recently dug my Atari 800 out of storage, replete with 300+ games, and old essays from high school on Atari Writer...nostalgia aside, I want to run my old Atari applications on my Macintosh, so I acquired a very nice (it seems) emulator called Rainbow. Rainbow requires that I copy my Atari 800 Operating Sytem out of ROM and onto my Mac. I am having a very hard, well, extraordinarily hard, time doing this. It is turning into a brain teaser of sorts. Anyway, to make a long story shorter, does anyone have a copy of the Atari 800 OS from ROM which they could e-mail to me as an attachment? I am told it is around 10K in size. Any tips in general about transfering files from my Percom Dual Floppy Drive onto my Macintosh would be appreciated too. I assume I would use the Atari 850 I/O unit and hook it up to the Mac through one of the paralell ports into the Mac modem port. It seems I need a special cable, or coupler, to do this, since the Mac uses that funny little Mac-type plug to connect the modem.

Please c.c. replies to my e-mail address: davidsol@panix.com

Thanks in advance!

best,
db

I've got The Dungeon to work (albeit slowly) but I can't get The City
to get past the opening sequence. I got the files from the AR site and
I remember reading somewhere that the City files were corrupt. Is
there anywhere alse I can get them from?

Regards.

Actually the best thing about XLit is it's not written by Darek Mihocka. Then
after that I'd say that the best things are that it works better already, and
the author doesn't charge for it.

I'll tell you something else...I had ordered a catalogue from those guys to see what they have for 8-bit Atari computers. ALL of their games are more expensive than their worth, even the used games. I mean, you're much better off ordering 'new' 2600 games from Radio Shack for $9.95. And as for the 'used' games at 'expensive' prices, I can just go down to my nearest thrift store and pick up a copy for under a dollar without even haggling!! Jeepers, I even got a rare Rubik's Cube cart for 90 cents...of course I 'had' to take that awful ET game that was taped to it since it was the only way they can get rid of it.

Let us face it, old games are not worth even a quarter of the games that are not out now because of the technology we now have. The worth of classics are that they are still fun after all these years, and yes I did loved Rubik's Cube even if it had a VGR rating of Ultra Common! :)

>> Photos of real world scenes compress
>>better in jpeg; and stuff like line diagrams or nondithered 16-color
>>diagrams are better in GIF.
>
>Interesting; didn't know that. Probably because JPEG sticks to 24-
>bit data, whereas GIF provides the capability to pare down its palette
>to however few colors are actually in the image. Is that it, or am I
>way off base?

That's not quite it. The difference is in the entire philosophy
behind the storage. GIF stores the image pixel-by-pixel, compressed,
but it is a compression that can be reversed without loss. JPEG's
compression scheme is willing to lose some of the information, but in
general it is information that nobody would notice losing.

When storing images with definite edges and areas of the same color,
GIF's compression is better, while JPEG's wave-oriented compression is
better for complex images where adjacent pixels are
almost-but-not-quite the same.

From the JPEG FAQ...
<http://www.cis.ohio-state.edu/hypertext/faq/usenet/jpeg-faq/>
#JPEG is designed for compressing either full-color or gray-scale
#images of natural, real-world scenes. It works well on photographs,
#naturalistic artwork, and similar material; not so well on lettering,
#simple cartoons, or line drawings.
[...]
#JPEG is designed to exploit known limitations of the human eye,
#notably the fact that small color changes are perceived less
#accurately than small changes in brightness. Thus, JPEG is intended
#for compressing images that will be looked at by humans. If you plan
#to machine-analyze your images, the small errors introduced by JPEG
#may be a problem for you, even if they are invisible to the eye.
[...]
#Furthermore, JPEG is far more useful than GIF for exchanging images
#among people with widely varying display hardware, because it avoids
#prejudging how many colors to use.

I could quote more relevancies, but you get the idea; the JPEG FAQ has
an entire sectioon on GIF vs. JPEG.

The Bandwidth Conservation Society has a page that addresses the GIF
vs. JPEG question:
http://www.infohiway.com/way/faster/tuts/gifsummary.html

>>If the images are stuff like circuit schematics or other line
>>diagrams, though, I suggest bilevel TIFF using packbits or FAX
>>compression. Even _I_ could write a viewer for bilevel TIFF display.
>
>Hmm, so could I, as long as I had access to the public-domain TIFF
>library -- but TIFF seems like almost "overkill" for saving bilevel
>information... The overhead is going to be larger than the data...

It's been a while since I've looked at the TIFF spec, so I don't
remember how much overhead is involved, but it's definitely one option
to look at. It's what I normally use when I need more than 256 colors
and no loss. But for only 2 colors I don't know; I do know GIF would
be good there.

I'm surprised nobody has mentioned PNG (Portable Network Graphics),
the format that was designed specifically to replace (and improve
upon) GIF. See
http://quest.jpl.nasa.gov/PNG/
In comparisons with JPEG, it is more like GIF, but it can be used for
much of what TIFF is used for now; it also has better compression
than GIF.

Message-ID: <4nr7gf$kpq@charm.magnus.acs.ohio-state.edu>
Source record: 83758

Among the many Atari program ideas I've been toying with is something to convert Atariwriter documents to a format directly usable on modern machines. Although I'm not sure about output formats yet (most popular ones are proprietary and/or overly complex), I figure the first step is re-obtaining the list of control codes. I sold my Atariwriter cartridge and documentation a while back.

So, could anyone send me the list? Even if it takes me forever to actually get a program written (I have finals coming up), I'll at least get the information available on my web page.

There is one program that is close to a virus that I have. It is
called Zapper. What it does is write on the end of an executable code
that contains a counter which one sets to a specific number. The next
time you load the program after the predefined # of loads it formats
the disk rather that running the program. Also the program can scan
for infected files that contain zapper and disable it. I guess you
could classify it as a trojan.

To the person that inquired about the "bonus game" --

After you complete the regular part of game (you must get the diamond ring, Quick Claw, and Pitfall's niece), a doorway opens up. Pitfall jumps for joy to the theme song, and automatically goes into a new area. This part is known as "The Adventurer's Edition" (check out the title scroll).

The second part of the game requires a lot of patience, dexterity, and a good memory. It's another treasure hunt, of sorts. You must acquire a lasso, a basket, a horn, and a charmer (this is the person that will help you get out of The Lost Caverns). When you have completed all this, you get a nice finale. The charmer plays a tune, the rope comes out of the basket, as you, your niece, and Quick Claw hang on, and go the surface. I think the diamong ring was also on the rope. Thus, you get a definite conclusion. You also must remember to be the right room for this to happen. When you start off, there's this one empty room informing you of what you need to win. After you get all the items, go back there.

The creatures are faster and more abundant, so you have to be on your guards at all times. Also, the rooms are not set up as easily to access to go exploring. So if you die, or miss a step and fall, you have to go through quite a bit of backtracking (which is often a headache). Hence, this can take you several hours to complete.

When you start up PCXf you must list the .xfd file as D2:. When you
type DOS from BASIC you will get the DOS 2.5 menu. Type A <cr> then D2:
<cr> (where <cr> is the return key). This is how you get the D2:
directory.

If the game is a Basic program, type RUN "FILENAME.BAS". Otherwise type
DOS to go to the Atari DOS menu, where you can type "A" to see the list of
files and "L" to load a file. Some programs need to be run without Basic.
On a real Atari, you would either unplug the Basic cartridge or hold down
the Option key. The XL-IT emulator should have instructions on how to
enable or disable Basic.

It depends, do you have a shell account or a ppp/slip account?

If the former, there is at least one vt100 emulator w/ 80 column
capability for the 8-bit. I doubt that there exists ppp/slip or any other
TCP/IP software for the 8-bit.

There were different versions of the MIO. Some used a standard Atari 9
volt AC supply, and others used 5 volts DC. I think the 5vdc version used
a different connector, and that 1 meg MIOs used 5vdc, but I could be wrong
on either or both of these. I don't know what power supply the MIO II
uses, if it's even been released. You could write to ftooned@crl.com for
information.

If your account isn't a shell account, you may be out of luck. If it is a
shell account, get an introductory book on Unix. You might want to use a
VT-100 emulator program like FlickerTerm or Ice-T.
Shell accounts seem to be going out of style. In my town there are
several new Internet providers, but none of them offer shell.

Mydos doesn't automatically skip bad sectors, but you can tell it which
sectors to copy by putting the sector numbers in parentheses after the
drive names.

This is actually what I am trying to avoid, because copying sectors 1-100
then 102-715 and then 717-720 is pretty time comsuming when you have a
couple of hundred disks to copy.
Rob.

If it's SLIP/PPP, forget it. If it's a dialup shell account, just get an
80 column emulator and call your provider.. it should work..

What version did you finish? The Atari 8 bit version is the only one
to my knowledge that includes a second set of screens (after you touch
the monkey). On the first set of screens you have to touch your twin
(The guy with the hat), right after you jump down from the balloon.
On the second set of screens, you have to get: the hat, the rope
(Thats the toughest.... if your stuck, heres a hint. Keep running and
jumping, the bird will never touch you, keep right on his tail), the
flute, and fat boy (well, what I call fat boy, he looks like a fat
version of your character)

It's pretty cool. I was so ecstatic when I first did it I jumped up
and down for a week.

Speaking of ecstatica, does anyone play that for the PC? I'm stuck!
And yes, I have the walkthrough, doesnt help.

The MIO can use both AC and DC. Just plug in any 1050 power supply and it works fine. I have had both the "video expansion" slot type and the "non video expansion" type and they both work the same.

As far as the MIO II goes, well, don't bet on it. I know FTe's voice number, and I can't even get ROMs from the guy. I hope Mike gets it together soon.

2965. Ape 1.09 Available Soon

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-22 00:00:00 UTC
From: dh395@cleveland.Freenet.Edu
Message-ID: <4nu87b$9mb@madeline.INS.CWRU.Edu>
Source record: 83789

Ape 1.09 will be available soon. Registered users may contact me for
a beta test copy.

Some info on 1.09 as it stands now:

```
Hello beta testers!^M
^M
As you may have noticed there is _no_ documentation yet^M
included for Ape 1.09, and there is still no documentation for^M
the still beta Prosystem 1.50.^M
^M
Ape 1.09 and ProSystem 1.50 now support images of^M
enhanced density and a extension of the .PRO format was^M
changed to help this along.^M
^M
You _must_ convert your old v2 .PRO images to v3 .PRO^M
images or they cannot be used with Ape 1.09. A fast and^M
automated program, PRO2TO3.EXE is included to convert all^M
your old images. You can give it a wildcard filespec so^M
you should be able to convert all your .PRO images in one^M
pass :)^M
^M
There have been a ton of internal and visible changes to^M
the ProSystem. These changes will be documented in the first^M
version of the ProSystem documentation.^M
^M
Beta users of ProSystem 1.20 ___WARNING___, please contact^M
me for an update to 1.50. Bugs in 1.20 can cause corrupted disk^M
images and images that fail because of a density detect bug.^M
^M
^M
Major changes from Ape 1.07 -> 1.09 BETA (As of 5/5/96)^M
--------------------------------------------------------------------------^M
Executable file now smaller because of internal changes in^M
allocation of dynamic memory vs. the old static method.^M
^M
Executable now uses overlays for routines that are not time^M
critical, freeing page space for more features in the main^M
program.^M
^M
850 Emulation Fixed - A problem in 1.07 caused a 6502 vector in the^M
stage 3 handler to point to a BRK instruction (OOPS!).^M
^M
850 Emulation Fixed - Problem with concurrent I/O dropping out the^M
instant it starts cured.^M
```

^M
Fixed DCM code to allow decompression of double density images, bug^M
has been in the DCM code since its was written.^M
^M
PC Mirror: Files written to the PC mirror would fail with a DISK FULL^M
message after about 400 sectors, fixed. Mirror now supports^M
capture of files upto 8 Megs.^M
^M
Writing to a file that already existed in the PC Mirror drive^M
would cause the program to fail with a device timeout. Mirror^M
now supports writes to any file, even if it exists.^M
^M
Files written to the PC Mirror would on rare occasions be^M
truncated to 125 byte intervals, or have an extra 125 bytes^M
appended. Fixed.^M
^M
Files written to the PC Mirror would appear in the default^M
DOS path instead of the current PC Mirror path. Fixed.^M
^M
Ape and ProSystem now be more monochrome friendly. If MDA adapters are^M
detected all screens are displayed in white on black _only_.^M
^M
Ape 1.07 could be crashed about 10 ways with runtime error 203. This^M
sloppy memory problem has been fixed and wont happen anymore.^M
^M
Spartados 3.2x (XF551 version) is now fully supported. Thanks to the user^M
who sent 3.2x for testing. Problems included failure to format any disk^M
(floppy or HD). Unknown if this will effect the X cart situation.^M
^M
When ATR images were created, they could then be mounted on the same^M
drive as the PC Mirror, caused some interesting effects but is fixed.^M
^M
When creating ATR images they would appear in the default DOS path if^M
no path was specified, they now appear in the default ATR/PRO path.^M
^M
APE ProSystem emulation code rewritten and streamlined, added 5 extra^M
emulation modes (more coming). ProSystem now _requires_ version 3^M
format images. See the above instructions for converting your^M
existing .PRO images.^M
^M
Many improvments to file selector including better path handling, type^M
highlighting, drive change entries, visible marker (mono friendly) and^M
internal changes.^M
^M
--^M
^M
Thanks to everyone who sent images, bugs, raves, etc. I will try to mention^M
all of you personally in the offical read_me, for now you know who^M
you are and your help is much appricated!^M
^M

Of course a teriffic thanks to all that have registered since 1.07. Most^M
all the above enhancments are only for you, and I hope they make APE^M
a better and easier to use product for _you_.^M
^M
Steven Tucker^M
^M
Author of APE: The Atari Peripheral Emulator, APE ProSystem, and^M

Me too. The article was "Paperweight" and it represented the frustration
users were having with Atari at the time (some things never change).
It was a Feb issue, but I can't remember the year. There were scores of
complaints in the following issue about that and the Editorial which
had given the impression that everyone should give up their 8-bit and
move onto its bigger brother, the ST. I remember that issue well.

>Phil
It depends on which MI/O you have. I have the 256K version and am using an Atari 1050 disk drive power supply and that works fine. I bought mine used and it had no PS with it. If you have the 1MB version you'd need one with a high VA rating than the one I'm using. You should check with FTE to see if they carry them. You can contact them at 1-800 GET-REAL.

I have already hashed out the interface and the graphics, I just need
to see how they handled the combat and the Line-of Sight stuff. I have
not a clue how they did it, inas the docs don't tell anything about
it.

>is positively puny compared to most others.

Let me put an Atari 8-bit spin on the catalog, since they did advertise here
as well.

They have a great selection of over 100 Atari 8-bit carts, but they charge
$20 a piece for everything! Even if a cart is loose, it's $20, no
execptions.

And some of these carts are "obnoxiously common" (as Jay put it). Can you
imagine paying $20 for:
Centipede Pac-Man Donkey Kong
Defender Pole Position Deluxe Invaders
Frogger Joust Asteroids
Super Breakout Music Composer E.T. (!!!)

They also have a collection of Atari 8-bit disks, mostly that stuff you found
clearanced at Kay*Bee stores 10 years ago for $5. Everything here is priced
$10-$15 (Ok they do have 3 titles for $5, but there's also a couple at $20).
Some things are an OK deal, but the majority is over-priced as well.

Overpriced Examples

$13 Preppie or Preppie II
$13 (Mastertronic junk like Action Biker & Kickstart)
$15 File Manager

OK Examples

$10 Boulder Dash Construction Kit
$10 Spy Vs. Spy I & II (together)
$10 Flight Simulator scenery disks

Lynx carts are also extremely over priced. Crappy common games like "Pit Fighter", "Kung Food" and "Basketbrawl", which retail for $15-$20 at Toad Computers or Bits-of-Fun are $40!!! The only rare Lynx cart they have is "Lemmings" for $40, which isn't too bad. Everything else is quite common and sells for $25 or $40.

(PLUG: You can get over 20 of the 28 carts Video 61 offers for the Lynx for $12 or less at Don Thomas' Blow-out sale at:
http://www.atari.com/wacky.html)

Shop around folks, Video 61 is extremely out of line.

Source record: 83796

CC&C was one of my favorite games back "then," and about a year ago
some extremely kind person sent me a copy of it, free (Matt Pritchard,
if you're out there email me! I never thanked you!!).
But something was wrong with it. After going through part of the
opening stuff (right after selecting a city to destroy), I get an
error 13 at line 1172. (It's a BASIC game.)

Here is my 1172:

```
1172 NEXT J: NEXT L: FOR I=U0 TO U10+U5: PW(I)=U5: NEXT I: FOR U1 TO MT
```

Obviously, the end of that line makes no sense. Could someone tell
me what it is supposed to be (or provide a printout of the pgm)? I
recently hooked up the machine again and am dying to play this game!
Thanks very much...

Jeremy

Two come to mind, 'USCOPIER.COM' and 'COPYMATE.COM'.
If I remember correctly, Copymate is the better, came with the "CHIPMUNK"
disk and was out as a Shareware version. It is simular to DISKEDIT where
it put up a table of all the tracks and sectors and showed you which sectors
were bad or what seemed wrong about them.

Hope this helps; Rich Mier

The 256K and 1Meg use the same power supply. The 1050 one
will work just fine. The MIO is made to use AC or DC voltage. There was
an article around a long time ago about connecting it up through a 12 Volt
motor cycle battery and a trickle charger so if power went off while no one
was around, it would save the contents (useful for BBS's).
BTW, Don't use a 5 volt supply. The MIO has a 5 Volt regulator
in it and it has to have 7.2 V minimum to work correctly. Or is it 6.2 V.?
Oh well, you get the idea.

You might check into the cc65 compiler, by JRD. He published it under
the Free Software Foundataion copyright. It seems to offer what you
are looking for. Personally, I think it would be a snap to get it
assembled for your system. Just change the zero page equates and the
o.s. equates, and it should assemble o.k.

Cc65 is available on umich, wustl, and the merit archive. Comes with
complete source code, too!

I'm late to this thread, so maybe I'm out of line when I suggest Action of M65 as alternatives to C on the Atari 8 bit line. Unless you are learning C in particular so you can program other computers, 8 bit programming on the Atari, C64, and Apple is best in Assembler and not much harder. M65 on the Atari has a tool kit with macros that can plug into your code nicely. Action is a language solely for the Atari, as far as I know, that incorportates features of C and Pascal into a language people seem to either love or hate. It compiles into pretty fast working programs too.

The way to do this is to get the phone number from the title screen (wait til Bob goes all the way to the bottom level). Just type that in and then you can jump to any board. (There is a way to adjust the speed, too, and one or the other might need a CTRL key with it. I'm not sure, but try it out. What I mean is, type the ph#, then hit CTRL-6 to go to board 6. Maybe. I know it's something like that!)
Tidbit: because of said title screen, I can never see or hear the phrase "Van Nuys, CA" without thinking of this game :) I played this game a million times a day for a couple years...
Jeremy

2981. Re: Need Crush, Crumble & Chomp help

The very first time I played "Pitfall 2," it was on my friend's 2600 (before I got one for my 8-bit). He explained to me what the object of the game was, and referred to that character as "Pitfall Harry's niece."

2991. new source for Atari 8-bit power supplies

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-23 00:00:00 UTC
From: jasonbar@bolt.ucsb.edu
Message-ID: <4o14d0$ntd@bolt.ucsb.edu>
Source record: 83718

Howdy

I happened upon a new source for power supplies for our beloved
Atari 8-bit machines.

The controls lab in our mechanical engineering dept. here @ UCSB
got a bunch of catalogs from Jameco Electronic Components & Computer
Products. They also give us a 10% discount, so you might be able
to swing one too if you're w/ a university...might...

Anyway, they've got:
Atari 400/800 15.3W AC Table-Top Power Supply
part # 115924
product # CO14139
350 in stock
price on 1-9 of them is "sale"
price on 10-24 is $4.95 ea.

They've also got:
Atari 5W Linear Table-Top Power Supply
I compared the pins on this and they're identical to that of my
130XE. Only difference is this is rated @ 1A, while mine is rated @ 1.5A.
It should probably work anyway...I think...
part # 116089
product # CO70042
600 in stock
price on 1-9 is $9.95
price on 10-24 is $8.95

Jameco's # is 800-831-4242
fax 800-237-6948
bbs 415-637-9025

it just need a boot system that would come up with a menu type system to
select what I'd like to play, My first question does does this sound sort
or right, or am I way off, and second where can I find a booting type
program that I can copy over to the image file and make it boot properly?
Thanks alot for anyhelp, still need basic knowledge on emulation the faq
doesn't answer the question I'm asking myself :) but one prob at a time
right, oh and if it's not to much of an inconvience can you send me a cc
via email if you reply, my news server has a tendecy to forget thing
easily :)

Still tho, you have to admit, if it wasn't for their heyday, none of us
would have ever gotten the 'bug' ;-)

BTW, Somewhere deep in my archive of Atari information, I'm pretty sure
I saw ONE virus program, complete with a listing. I believe it was only
done to illustrate that an Atari 8-bit virus could be done. However,
given the size of the equipment.(meaning that a little bit of code could
potentially take up more space than what the Atari could spare while
running a legitimate piece of code, that viral propagation was very
unlikely even if someone did write one. IMHO.)

Don't forget the command line - (or config menu options) load a DOS or
bootable disk image. (If you use the config option - you have to reset
the emulator.) All the info is in the documentation.

I have a couple of programs called Super Duper and Super Duper Double.
Super Duper Double copies single or enhanced density (1040 sectors) disks using
1 or 2 disk drives (It also works great with Sio2PC!) If it comes across a
bad sector it says something like abort, ignore or retry. Ignoring will carry
on and copy the rest of the disk.

Have you tried looking for the NEXT that matches the FOR to find out the
missing variable name. The FOR is probably something like FOR I=U1 TO MT

I have never heard of the game so this is only a suggestion!

3001. XFD/ATR Utilities - Last few days

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-23 00:00:00 UTC
From: Ivan Mackintosh <ivan@rcp.co.uk>
Message-ID: <31A440AC.47A8@rcp.co.uk>
Source record: 83728

For the last couple of months my web page has provided an
archive for XFD/ATR file utilities. Unfortunately the web
space is no longer available and the site will be going
offline as from the start of next week.

The good news is that I think I may have found some other
web space and the site including new utilities and a new
design will be back in a couple of weeks.

If you want any software from this site get it now!

In article <4o0cac$l27@news1.t1.usa.pipeline.com>,
David Chea <dchea@nyc.pipeline.com> wrote:
>games I am specifically looking for are MULE, Alternate Reality, Mario
>Bros., and Ballblaster. Any help would be appreciated. Thanks.

I tried XL-It last night, and it's a very good emulator, but it runs
at only 30 frames per second on my Pentium-120, whereas Pal machines
run at 50 fps and NTSC machines run at (I think) 60 fps. Therefore,
I don't think XL-It would be fast enough to run Ballblazer (Ballblaster
was a pre-release copy.)

However, the author claims that MULE works, as well as:
" - Boulder Dash, M.U.L.E., Alternate Reality, BlackLamp, Plastron
- Schreckenstein, Ninja, Mario Brothers, Ballblaster, Pitfall
- Xevious, Defender, DigDug, Asteroids, Choplifter, Missile Command
- Frogger, BlueMax
"

Markus Gietzen has done a great job, and I look forward to his next
version!

Many isp's that do not provide shell accounts DO provide telnet! For example, if your trumpet winsock script must send "ppp" or "slip" to start a session for netscape, try this: Dial up your connection on your 8bit and log on. But instead of typing "slip" or "ppp", type a "?" for a list of commands. If you get this far, I'll be that telnet is one of the supported commands. So far, I've only heard of a single non-shell provider that started the ppp session automatically, without requiring the user (or the user's script) to start it.

Her name is Rhonda, she along with Quick Claw were characters in the
Pitfall cartoon they had awhile back. I guess David Crain decided to use
them in his other Pitfall games. I don't recall having to get a diamond
ring, think it's just another treasure or something.

I play AR: The Dungeon on a regular basis, however I can't get character disks to work. Frankly I find it rather annoying that there are about 5 different emulators out there each with its own pros and cons, but none of them work 100%.

I suppose ideally either 1) Markus would release the source code to his emulator or 2) he could incorporate patches to improve David Firth's emulator.

: Markus Gietzen has done a great job, and I look forward to his next
: version!

Agreed, however, it still has a ways to go.

There is an ASCII map of the first level on http://videogames.org
It's for the 2600 version, so it doesn't have the map for the 'secret'
level. There's also an ASCII map for Pitfall! ("one") there.

I have all the HTML, disk images, manuals, etc ready for a LucasArts page, but LucasArts seem to have no interest in replying to my e-mails (of which there have been *several* sent) - And I have no intention of using them with some sort of permission from them. Perhaps with the imminent release of Ballblazer Champions on the PSX they wish to keep the original copyrights tightly to their chest?

I have also tried several other companies to try to get permission, but the only one that replied was Broderbund, who stated that all their Atari titles were 'farmed out' and that they don't hold the (c) so can't give permission for the titles to be used!

If *anyone* out there holds the (c) to a *released* Atari title can they please get in touch with me (especially, 'The English Software Comapny' and 'Synapse Software' authors!)

Douglas Feldman (DougF@gnn.com) wrote:
: It seems ironic that during the years of peak popularity of 8bit Atari,
: there was rampant file swapping among owners. Yet, now that nearly all
: Atarians have moved on to bigger and better machines, the remaining users
: seem to be ever more protective about swapping these same old game titles.
: Most of those old software titles must be nearly impossible to buy from
: retail sources.

Hmmmm, Douglas, that's a *very* true and intriguing observation. Wish I'd thought of it myself <g> Did a lot of former Atari programmers/fans go into the programming market?

I recently visited a local used computer/software dealer looking for a cheap 850 interface so I could hook up a 1200 baud modem to my 8-bit (just for grins, no luck) and the pickings of Atari 8-bit software were very slim compared to the last time I was there (about 2 years ago). And no Atari hardware in sight. I'd bought a replacement 1050 drive from them when my Percom went out a few years ago - still works beautifully.

Comparatively tons of C64 and Amiga hardware for sale there.

Anthony Maffia (maffia@fox.CS.Berkeley.EDU) wrote:

: Perhaps it would be wise to set up a central registry, some ftp site or
: elsewhere, where we could list all known games / venders, and the copyright
: status of the titles. I imagine building a file for each program, indexed
: into directories by vender, containing the email messages sent by the
: companies when they are contacted. Then a summary section could be
: maintained. I think it is imperitive that we are organized in our fight to
: release the titles from copyright obscurity, and that we don't rehash the
: same issues every 60 days. It would be wise, for instance, to quote the
: letter from Broderbund to this group so that people can take it from there.

I think that's an excellent and worthwhile idea. So many people seem to
be interested in the same goal but often go about it on their own; I think
that's a waste of effortm, seeing that the current copyright holders are
so hard to locate; information needs to be exchanged if we expect to be
able to do this efficiently. Plus, companies such as Lucasarts will be
more likely to respond if they see that lots of people have an interest
in it.

```
------------------------------------------------------------------------
SWEDISH ATARI USERS' ASSOCIATION (Svenska Atariklubben)
IN COOPERATION WITH NoCrew PRESENTS

-* THE NORDIC ATARI SHOW AND CONVENTION 1996 *-

WITH CONVENTION, EXHIBITION, SEMINARS,
DEMONSTRATIONS, CONTESTS ... AND MORE!

AT KORTEDALA GYMNASIUM IN GOTHENBURG, SWEDEN
ON THE 14th, 15th and 16th OF JUNE
------------------------------------------------------------------------
NOTE: The information in this text is not complete! Updates will come.

PRESENTATION

NAS was first arranged in 1995. It's a special show with a hacker convent,
exhibition and different seminars - all in one place.

This time the Nordic Atari Show is held in a school building, Kortedala
Gymnasium, in Gothenburg. It offers several small rooms for the hacker
contests and seminars, a big lecture hall for showing demos and films and a
normal size restaurant for the exhibition. Showers and dressing rooms are
available, and there is free carparking in the school area.

Pizza restaurant, cafe and other shops are only a few steps away from the
school. If you want to stay at a hotel please contact us for information
or visit our Webpage for details (http://www.tripnet.se/sak/nas).

Kortedala Gymnasium is fifteen to twenty minutes away from the central part
of Gothenburg. There are good possibilities for communications by tram or
car.

The dates are the 14th, 15th and 16th of June. Gather with your friends and
join us at a very fun and exciting show for Atari users around the northern
and european part of the world!

This year the exhibition and seminars are arranged by the Swedish Atari
Users' Association (Svenska Atariklubben), and the hacker convent by
NoCrew.

Below are all the activities, and the low entrance prices. Last year they
were a little bit high, but this year we hope it's suitable for all
wallets!

THE ACTIVITIES

For more detailed information see below.
```

exhibition
retailers and different associations will be there

hacker convent
competitions for FALCON, STE, ST and 8-bit

demonstrations
Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars
about programming, Internet, multitasking etc

others
competitions for the non-programming experienced
(lottery, MidiMaze-contest, harddisk throwing, CocaCola-drinking etc)

THE PRICES

type payment SAK-member non-member

3-day entry prepaid SEK 100 SEK 125
3-day entry at the door SEK 125 SEK 150
1-day entry at the door SEK 50 SEK 75

The T-shirt is gasping yellow with a fine black print. Highest quality.
Don't miss this fantastic offer. Limited quantity.

T-shirt prepaid SEK 75 SEK 90
T-shirt at the door SEK 100 SEK 120

A cafeteria with low prices on CocaCola, Jolt, sandwiches, buns and
other tasty products will of course be available.

If you live in Sweden, you can order your tickets to NAS96 via
our Webpage at http://www.tripnet.se/sak/nas

Otherwise, if you live outside Sweden or don't have WWW access, and want to
order tickets to a lower price, please pay the right amount of money to our
Swedish postal giro account

nr 73 69 10 - 1

before the 31st of May 1996. Don't forget to state your name, address,
country, telephone, fax, email address and SAK membership nr so that we
know who's paying.

THE EXHIBITION

The exhibition will be open on the following times:

Friday 14th 12:00 -- 21:00
Saturday 15th 09:00 -- 21:00
Sunday 16th 09:00 -- 16:00

If you and your company or organisation wants to join the exhibition, then
estimate the space you need and pay the fee to us. We offer you different
sizes (measurements in Swedish meters) depending on your needs.

4,5 m2 costs 500 SEK
9,0 m2 costs 1000 SEK
18,0 m2 costs 2000 SEK

If you want more space, then every extra m2 is 150 SEK. Please contact us first to get further information.

The retailer's fee includes full entrance for two persons.

Nonprofit organisations can join the exhibition for free (with a space of 4,5 m2). This includes full entrance for one person.

Please pay at our Swedish postal giro account,

nr 73 69 10 - 1

before the 31st of May 1996.

State your company/organisation name, address, country, telephone, fax, email address, contact person and space needed. If you'd like to speak at a seminar about something, then tell us about it.

THE DEMONSTRATIONS

More will be added as soon as we get to know about them.

BBS We'll be showing STraight BBS, with products as Semper, LED, Octopus etc. Sysop Bertil Jagard will be answering questions and demonstrate different situations, as well as speaking about ethics and problems with communicating.

MagiC What is MagiC? What is multitasking? Find out by using MagiC 4, and swapping between those programs. Learn about problems and get tips from experienced users.

Making How can magazines be made with Calamus SL? We'll be showing how magazines the Swedish Atari Users' Association (Svenska Atariklubbens) with SL magazine "AtariMagasinet" is made. Tips, problems, features and possibility to make yourself some visit cards or other things to take home.

THE SEMINARS

More will be added as soon as we get to know about them.

Internet What is Internet and how can I use it with my Atari? Experienced administrators will be talking about Internet - history, how it's made, the future and more. We'll put it in reality too, with products for Atari computers that all of us can use - easy!

THE CONVENTION

NOTE: This is preliminary information. Updates will come.

Which computer? Atari in all forms. We want the hackers and the democoders. The Linux freaks. The MiNT people. The Jaguar nuts and everyone else that uses Atari in some form.

Demo contests

BIG ONE
No limit at all. Should be able to run on a Atari compatible computer
present on NAS96.

SMALL ONE
The limit is the shoesize squared (european) of the deliverer in bytes.

World cup in alfabutton

We will try to break the world record in typing a to z on a standard
keyboard. So far, way below two seconds. Go practise...

Films and demos

We will alternate between showing films and old demos on our big
screen projectors. Of course newer ones as well.

Prices

They will most certainly show up and be of good quality.
More info to come.

More information is available from larkov@tripnet.se, or visit NoCrew's
homepage at http://www.dd.chalmers.se/~f93labr/nocrew/index.html

It's about 25% faster, although anything tied to the VBI is about 12% slower,
of course.

I'm assuming that reactivates the ROMs in the process... That explains things
rather well. Is the vector at (12,13) the earliest opportunity to intercept
a RESET on XLs and XEs?

Atari's biggest problem may have been piracy... That's what the developers
usually complained about. I'd say what finished both the 8-bit Atari and
C64 was primarily the new generation of machines from Apple, Atari, and
Commodore. The PC didn't _really_ catch on until the late 80's, when VGA
and the clones came along.

This is the copy which I use, as well. It seems to be a good crack.
The reason why the character disk isn't working yet:
I haven't added format-support. But I try to include this in one of the
next versions.

Bye,
Markus

3027. Help with US Doubler install!

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-24 00:00:00 UTC
From: dh395@cleveland.Freenet.Edu
Message-ID: <4o31iq$cgp@madeline.INS.CWRU.Edu>
Source record: 83738

Got lucky and a friend brought over a 1050 he found at a thrift store, the drive of course didnt work.

However, when I opened it to see whats wrong it looks like some little monster decided to have fun and rip out all the chips and connectors and ... we you know <sniff>. But the stuff under the shield was all intact and it looks like a good US doubler! <whee!>

Can someone send instructions for re-installing this in a good 1050? As I recall from the days when I purchased a few of these that it just requires jumpers to be moved/installed?

Help please! :)

Thanks!

That's a very good question. There currently isn't a site to speak of where you can get them. Unfortunately a lot of people seem very tight assed about copyright infringement when it comes to the Atari 8-bit, but not about any of the other computers of the era, i.e. C64, Apple II, etc. So hopefully someone will put up a site for the 8-bits soon.

Oh, to each his own. After all, I called the guy in the second level
"Fat Boy" after my best friend in grade school (who incidentaly, also
provided me with the name "Yogi". He was called Boo-Boo and the name
kind of gravitated over. Oh well.)
To the reply above this one, why do you have to get the white mouse
for anything? I never had to, the worst I had to deal with was playing
the comode 64 version and having it end at "Quick claw" (Where do you
people get these names? I always called that "The Pissing Monkey"!)

From: DougF@gnn.com
Message-ID: <4o3cf8$h2f@news-e2d.gnn.com>
Source record: 83741

It seems ironic that during the years of peak popularity of 8bit Atari, there was rampant file swapping among owners. Yet, now that nearly all Atarians have moved on to bigger and better machines, the remaining users seem to be ever more protective about swapping these same old game titles. Most of those old software titles must be nearly impossible to buy from retail sources.

Is it possible that 8-bit users who have access to Web Home Pages could actually place some of these titles up for public consumption? Who would police this activity? Has anyone tried this or even thought about it? I know that here on the GNN service, we have 20 meg storage space to do whatever we want to do. Isn't there a similar capability on most of the competing internet service providers?

Any comments from internet gurus out there?

Happy Computing, from Doug Feldman in Ann Arbor, MI

3031. Latest SIO2PC directions?

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-24 00:00:00 UTC
From: jeffk914@groucho.roc.servtech.com
Message-ID: <31a53daa.2216825@news.servtech.com>
Source record: 83742

Well, I think it's about time to finally build the SIO2PC cable, copy my stuff over, and start running APE (registering it, of course. :)

I know there's a two-chip and a one-chip version, but most of the schematics and instructions I've seen have pointed to, well, more than one chip. The one at the end of the APE page looks the closest... One chip plus a diode. Is this the "one to build"?

Thanks!

I don't remember clearly but I recall that there are three addresses
at the end of the Atari memory; $FFFA-$FFFF. One is the IRQ line,
another is the NMI line and I'm *sure* another is the RESET one.
I believe RESET, although an NMI, does not vector through the normal
NMI service routine.

I suppose you want a C compiler to write portable code to other machines?
Otherwise, I can't imagine why any veteran C coder would want to use anything
other than Action! for programming on an 8-bit machine. To me, Action! WAS
the C compiler for the Atari 8-bit. :) I tried LightSpeed C and CC65 but
I always ended up back with Action!

As far as portability goes, I never had anything (that didn't address
Atari hardware specific peculiarities) written in Action! I couldn't change
into C code in Emacs with minimal effort.

unfortunatly, you have to reach the final level for the secret codes to work. there are some shortcuts though.

BTW, this is for miner 2049er II. I don't think the original had any codes unless there were and I never found out about them.

The main one is from Level 2 to 22.
"Kill all the mutants and then get the pain roller. Press key 3 and then press "Start".

There are only 25 levels so you should be able to get to the end. When you do that you get unlimited access to any level you want. untill you turn off the computer.

randy.
800xl and the Internet. Why pay more.

> reached the last two or so levels....

Sure! Just type in Big Five Software's phone number, as it's displayed
on the Miner 2049er title page. Just the numeric digits, no punctuation.
After that, you can hold down SHIFT-CTRL-1 through SHIFT-CTRL-0 to
instantly jump to level 1...10. (I find that if I die, if I press
any SHIFT-CTRL-# combination just before the final screen-reset of the
death sequence, the death isn't registered and I can thereby get
"infinite" lives!)

Enjoy...

Before the titles came up, you had to type 213-782-6861 (without the dashes)
and that would let you warp levels by pressing SHIFT 0-9 (0 meaning 10).

I'm not sure about the # but it is in the intro as the phone number for the
company (I forget the name). I can't believe I remember the damn phone
number after all these years.

Extra points for one thing. And in the Atari 8-bit version, if you didn't obtain the mouse before going after Quick Claw, Pitfall Harry would jump for joy endlessly, and that's where the game stopped. So technically it was a "no-win" if you had intended to continue on in "The Adventurer's Edition" portion.

I always used to call it the Pink Panther before I ever got to se the manuals... I remember hearing from everyone else who played the commodore versions, 5200 versions, etc, and none of them included the second level... I remember playing the first level for 6 hours strait and finished it, and was TOTALLY suprised when I discovered the second level!! I left the computer on for a couple of days straight so I wouldnt loose my place, but I could NOT figure out the level at all... way too complex :)

You know what would be really cool? a map! a big map with ALL the screens on one (possible a large GIF) .. either drawn or screen captured would be awesome..

Definatly build the 1489 version. :) It has 2 great advantages:

1) Its _really_ cheap to build yourself.
2) Its more reliable than the Max232 version by the fact that it has less
complex parts to fail.

On this point has anyone else had Max232 cables fail? I've heard from at
least 3 people who had overheating problems w/ Max cables (both
APE and PRO setups), but never with a 1489.

>>>>
If it is a EPROM, use jumpers J2 and J4 (move J1 and J3). If it
is a straight PROM, use J1 and J3 (nothing in J2 or J4). Leave J5-7 alone.
Most early 1050's had EPROM's in them so you don't have to change them.
Later models use straight PROM's. (EPROM's have the little 'window' on
top, usually covered with a sticker.)
The 'Module' replaces the U8, a 6810 RAM and the EPROM
replaces U10. Most USD's came as PROM's but some of the first where
EPROM's.

Hope this helps; Rich Mier

Perhaps it would be wise to set up a central registry, some ftp site or elsewhere, where we could list all known games / venders, and the copyright status of the titles. I imagine building a file for each program, indexed into directories by vender, containing the email messages sent by the companies when they are contacted. Then a summary section could be maintained. I think it is imperitive that we are organized in our fight to release the titles from copyright obscurity, and that we don't rehash the same issues every 60 days. It would be wise, for instance, to quote the letter from Broderbund to this group so that people can take it from there.

I have one of the very first versions...I find that it is very
funny under Sparta DOS. I have played with the Object File
that came with a Disket suited for DOS 2.5. Put that under
Sparta, found that it won't boot without hitting the reset
key once the Graphics Handler is loaded. I have to use the Sparta
prompt to get the desktop to install. Then it won't load and
run any .COM or OBJ. files at all. Keep in mind this the DISK
provide under 2.5 as a DEMO. The problem it has with a
Sparta formated disk, with version I have, is that it only runs
files with .OBJ extenederes. Not .COM as so easly used with Sparta
DOS prompt. So I must have and early version..

Kevin

I have an earlyer version then. Did you develope later versions to be
more friendly with Sparta DOS? How do I get the later version? Your
old buisness number has been disconnected of course. I can't get the
old cart to load .com files. Only .obj code files under Sparta. Then,
when I hit RESET it drops me into Basic and the GOS is gone. The 8-bit
really needs a DESKTOP badly in today's Point and Click habits. Have
you seen ICET..the modem program? It is fantastic. In 80 colomns
and easy to use to view ANSI graphics. I would like to set up my
system to run in a graphics environment without having to reboot,
and hit the reset key so much..
Oh, by the way, nice to meet you..

If you have an 850 interface or some other SIO to RS232C interface, you can use up to 9600bps modems. I believe, at one time, there was a patch for the ICD P:R: Connection that would allow up to 19200. I don't recall if that worked correctly or not. Anyway, these interfaces units would allow you to use ANY standard external modem. Unfortunately, the 1200XL doesn't have an ECI port built in or I'd recommend the CSS Black Box or similar. These would give you real connecting power.

Jet Boot Jack was probably (?) their most famous title. Also
Elektraglide, Diamonds!, Dan Strikes Back... I got one of their
collections, with JBJ, DSB, Fire(something), Captain Sticky's Gold and
one more game (Galaxians-like shoot-em-up). That reminds me, if
anyone has Dan Strikes Back, I'd REALLY appreciate a copy, since my
original stopped working.

Hello everybody,

Other than the handler supplied with my XEP80, does anybody know of the
whereabouts of one that works under SpartaDOS?

I'm using a PAL 130XE, with SDX, and wish to use the XEP80 module.
Unfortunately, the driver included is NTSC only.

There is one in the umich (well, the sunsite.doc.ic.ac.uk mirror) archive,
called xep80han.arc, but that appears to be NTSC only, too.

Any help greatfully received.

John M. Vogel wrote:

> Only for "works for hire", AFAIK. Otherwise, the copyright is usually
> owned by the author.

As I sold my commercial games I gave away my copyrights !
This depends on the contract but it was usual to do this because
the companies needed the copyright to make ports to other platforms.
They were also afraid that the author could make a similar game
and sell it again etc. etc.

Copyrights are a complicated matter. The more you think about it
the more you get confused. Needless to mention that different countries
have different laws. But this can be an advantage:
There are states without a copyright-law like we know it. If we could
find someone who lives in such a state ...
(but I forgot the names of these states ;-)
Of course it would still be illegal to download the software from there.

Bye,
Markus

: How do you create a character disk so you can actually play The Dungeon??

I would be VERY curious to know if anyone got a perfect copy of the dungeon. That game used phantom sectoring, and even my Happy drive would make a copy that when booted would change the (C) copyright logo in the startup to (P) and an FBI guy would kill you in the first few seconds of the game... QUITE sneaky..

Albeit, I belive to make a character disk, you have to format a single density disk with Dos 2.x and then 'format' it with AR:D . (That could be for AR:C, can't remember))

Ryan.

>retail sources.

Yes, oddly enough during the height of popularity for these machines, when it
was very obviously illegal to copy games, but lots of people did it anyway.
Now for some strange reason, people are worried about copyrights that while
they may still be in effect, it appears that the companies that produced the
titles are really not concerned about what people do with 12 year old games.

>Is it possible that 8-bit users who have access to Web Home Pages could

It is possible, I just wish someone would do it so those of us who want to
see all those good old games could have a place to go to.

Don't know what version you're playing, but thats not required to get
the mouse in the one I play. All you have to get is pitfall harry's
niece and quick claw, and it puts you into the next screen. pitfall
harry does jump up and down after you touch quickclaw, but after the
whole bonus song plays he runs through the gate.

The difference between ATR and XFD is that ATR files have a 16 byte
header. If you remove that, you have an XFD file.

I have been trying to get an archiver chip for my 810 ever since I first bought the thing back in the early '80s. Now that I have all my 800 stuff back (long story...someone else had it from '85 to '96), I'd like to renew the effort. I can burn the chip myself if someone has the 16K code sitting around and would like to send it to me, or I can buy a completed chip, or whatever. If you can help me, please email me at marcg@mich.com. Thanks!

You could do worse than to upload them to the PVV archive,

ftp://ftp.pvv.unit.no/incoming/atari/8bit/

Unfortunately, we only have about 70megs free right now, so depending
on the value of "several", there may not be enough room.

What is a Hard Drive system worth for the Atari 8Bit?

Components used..

Interface New..

SCSI Hard Drive, can either be new or used

Scsi Card converting MFM drive to Scsi, can either be new or used
Adaptec 4000a?

Capasity, from 20 mgs to 112mgs depending upon the drive selected
and card for the interface..

Power supply? You furnish, I furnish new/used? Shoe box types
new are still going for arround $85.00..?

If your interested get back to me e-mail..with what you want for
a system new/used and what you are willing to invest into the
system..

Chris, all:

Like I mentioned before, I have written a reader/viewer to display
and print out TIFF bilevel images produced by scanners. I never
released it because it only supports a tiny subset of TIFF, which
is a huge, extensible format. Anyone wishing to help me test it,
contact me and/or email me a uuencoded .TIF file (either no
compression or packbits).

Jeff

OK so I have an inept question -

XL-it v 0.13 seems to work pretty well, and I'm itching to play AR:Dungeon.

Problem is, it needs a character disk, which I can't seem to create.
Now, I know people have been talking about how AR works fine on XL-it, so
maybe some of you can help me out....?

How do you create a character disk so you can actually play The Dungeon??

Thanks in advance...

Oops, you're right. It's been a long time since I played the game. I must've confused it with the diamond (and don't tell me I'm wrong again <g>). But in any event, if you forget one vital element, you don't get to play the second half is what I'm basically saying.

hello. a few months ago, or maybe even further, i had a hard drive crash on me. i'm using an MIO hard drive setup with 2 seagate 20 meg drives. One person on here sent me email telling me how to repair those sectors that got screwed up. I'm not sure who it was, but i was wondering if anyone else knows how to fix a garbled directory with a bunch of subdirectories that are garbled too. I tried the file HDRECVR.COM, which has worked for me in the past, but sometimes it just doesn't want to work for some strange reason. anyone have any ideas how to do this? please reply. thank you

3090. [UK]400/800XL PSUs, compatible alternatives?

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-27 00:00:00 UTC
From: psampson@nortel.ca
Message-ID: <4obpts$akv@bmdhh222.bnr.ca>
Source record: 83617

Having obtained an Atari 400 and a 800XL, without PSUs, I'm looking for suitable alternatives so that I can get these machines back to life.

Having recently read about one chap who (possibly) fried his 130XE with a CBM PSU, I'm cautious about slapping any old supply into the 400/800XL.

I have the following Atari PSUs, and wondered if any of them are suitable condidates for powering either of the above. Obviously I don't want to zap the PSU and/or the 400/800XL and be left with yet another machine to find a PSU for!

- 65XE
- XEGS ... These are 800s in nice cases, aren't they?
- Jaguar

I also have a vast range of regular gender-bender PSUs, delivering 300mA -> 1200 mA (3v->12V) DC.

For some reason I've been unlucky with getting working Atari PSUs with most of my 2nd hand Atari machines. None of my 4 2600s came with ones that worked. Fortunately both 7800s have the original PSUs, because I'd have no idea where to get another of those stupid connectors Atari added.

Could someone give me the details on the PSU voltage and current rating, or alternatively anyone who sells PSUs (in the UK only) for either of the above.

What are you using for DOS? I hope SpartaDOS. SD has, in the tool box, a great sector editor. I've used it for data recovery loads of times. I don't know much about MyDOS file format, bu SD format is very easy to follow and fix. I've even rebuilt sector maps to get files back. Tediuos, but worth the work.

A local shop sells 7800 power supplies for the fantastic sum of 25 quid!

> Could someone give me the details on the PSU voltage and

> only) for either of the above.

My UK 800XL has a 5V 7.5VA power supply, whereas my 65EX has a 5V 5.0VA
supply. Both work fine on the 800XL.

The Atari 800XL and 130XE power supplies are the same. They output
5VDC @1.5A. The following pinout of the PS is as follows:

Looking at the connector on the PS cable, pins facing you.

```
/-o7 6o-\
0VDC Return <--o 3 1o--> +5VDC
\--o 5 4o--/
o
2---Hardware ground also includes the shell of the
connector.
```

Yes, many people have gotten a perfect copy of the dungeon,
or should I say a perfectly good cracked copy of the dungeon. I beleive
the copy I've seen was cracked by The Heist Network.

The new prosystem makes easy work of AR: The Dungeon, w/ all protection
in tact so it works perfectly.

I'm not sure how well the cracked XFD's from the AR page work, but they seem
to be able to bypass the 'killed by the long arm of the law' check.

Hello, can anybody help me tu access internet with my atari ??

My problem is :

I have a 65XE and a XM301 (300 baud modem), I bougth an account an
dialup service from an unix server, and downloaded BOBterm, Icet, and
all vt100 emulators i found. But my modem doesn't detect the carrier; I
can hear it when the server answers.

The modem's LED lights only vey dim, and the term send me a NO CARRIER
message, I can receive the header data (the "welcome to the ..."
message), but when i try to enter my password, the connection breaks .

What can i do ???

Greetings
M.

3100. Atari 800XL for Sale with Lots of Games

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-27 00:00:00 UTC
From: atoth@worldweb.net
Message-ID: <atoth-2705960258340001@dec1-port05.worldweb.net>
Source record: 83627
Cross-posted to: comp.sys.atari.8bit,rec.games.video.marketplace

I've got an 800XL that I want to unload. Why? For one my room is a mess. Two, I've decided to focus on my TI 99 instead, and three I was using it only as a gaming console and its pretty bulky for that. So I decided to get rid of it (already selling my VIC-20, probably going to dump my Coleco stuff). Heres what I got:

-800 XL Computer plus Power Supply - works great, looks pretty good
-Possibly an Atari book or two, a few flyers and warranty cards
-Atari 410 Program Recorder
-The following games (all cartridges):

Alien Ambush (DANA) - with box and docs
MIner 2049'er (Big FIve)
Fast Eddie (20th Century Fox)
River Raid (Activision) - best version I've played
Star Raiders (Atari) - with manual, two cartridges
Galaxian (Atari)
Basic (Atari)
Cloudburst (DANA) - with box and docs
Jumbo Jet Pilot (Thorn/EMI) - made in UK
Gateway to Asphai (EPYX) - with photocopied docs, fun
Defender (Atari)
Millipede (Atari)
Pac-Mac (Atari)
Asteroids (Atari)
Qix (Atari)

I might be able to scrounge up a joystick for you if you request it. I have a good reputation in rec.games.video.classic and I've trade and sold for over a year. I WILL NOT SELL ITEMS SEPERATELY!! I'm looking for the best offer over $30. I'll wait about 1 - 2 weeks before going ahead and selling. You pay shipping by any method you want. I will consider the following TI items in part or full trade:

-Monitor
-Disk Software, particularly a terminal emulator (NOT Term. Emulator II, that program is crap!) as well as commercial games
-Cartridges: I've got most of the common ones, looking for the rarer ones
-Catridges compatible with the MSX expansion unit

also,

-Buster Brothers for NES

Well, let's see... not as many as I'd like! I do know that in one of
my all-time favorites, Pharaoh's Curse, the secret code word (at least
on my game) is SYNISTOPS. Typing in SYN gets you to level 1, SYNIST
to level 2, and SYNISTOPS to level 3. I found this out by solving
each level, although when you solve level 3, there is no more code
word. THe different levels are all the same, but harder (more ubiquitous
bird, more pestering bad guys).

Jeremy

The old EA classics are one of the primary reasons to hold on to the ol' 800. In fact, of these older games, I've seen the Atari version, the Apple II version and (when available) the IBM PC version. In almost all cases, the Atari version was far superior in sound, and generally superior in graphics.

I had an Apple IIe along side a 1200XL for several years ('84-86). I only purchased the Apple when Atari games were becoming harder to find and everything was primarily Apple II. (The same thing would happen to the Apple II in a couple of years.) When I wanted a game which was available on both platforms, I always chose the Atari version.

> > More than a few people I know still keep their Atari 800 around for
> > doing M.U.L.E. playing at parties, although some of that's sentimental

> > system around.

Oh? M.U.L.E. may not have great graphics by 1996 standards, or even by 1988 standards, but in terms of playability it is *still* an all-time classic. It never gets old; I can say that about very few games--most of which were made a decade or more ago, and most of them had Atari versions. Remember, this is when 48K was a ceiling; there were no add-on memory modules or video cards. As a result, the designers and programmers did some *incredible* work getting everything to fit. These days, if an ambitious project doesn't work with a typical configuration, they rarely bother to tweak the code. Instead, they just make the "requirements" higher. Open systems are nice in some ways, but this isn't one of them.

It was always nice with the Atari 8-bit and the Apple IIe--knowing that if you buy something for that machine, it *would* work on that machine. Period.

With other games, it may be purely sentimental. There are a handful of games I keep coming back to--I've been a computer gamer since about

1980 (since about 1977 if you include the old VCS), and if I had to
list my top ten games of all time, I'd say that there would be at
least four or five with which I fell in love originally on the old
800 or 1200XL.

> > The failure of the 400/800 market had to do with the growing business
> > in C64 products along with (in my opinion) Atari's abysmal failure to
> > deal with that competition. If EA promised some 400/800 titles and
> > failed to deliver, it has more to do with Atari than EA.

Could be. EA made a lot of great games for the Atari up until
around 1985, and by that time the platform was showing its age. I
do think Atari dropped the ball a bit. If you compare the Atari 800XL
with the early IBM PC, the PC had a faster CPU (in terms of clock
speed) and more RAM--but I'm sure the 6502 could have also been
stretched beyond 1 MHz. Or perhaps there could have '202 and '302
chips which were faster but retained 6502 compatibility. Who knows?
Atari, Apple and Commodore didn't expand into the future well--which
was both a blessing and a curse; ultimately, it was mostly a kiss of
death for the platforms as the '286 and '386 took hold, and as VGA
graphics and sound cards stole the last advantages the other platforms
held. (The early IBM PCs had *abysmal* graphics and sound.)

What if Atari had provided a mass-market 20-40 megabyte hard drive
early on? What if it speeded up its disk drives so that a game wouldn't
take two minutes to load? Or improved its graphics chips and perhaps
had memory on the graphics module? (Remember that the Atari uses
regular RAM for its graphics.) Could the Atari (or the Commodore; the
introduction of the Mac showed that Apple at least saw something
coming) have made it into the 1990s--or even the 21st century--if the
engineers at Atari were determined to make their computers something
which could grow with the future? Would there now be a 32-bit
derivative of the good ol' 6502 which was still backward compatible
with the 6502? What if Atari quickly released an expansion module--
like today's Black Box or MIO--for its older machines and made their
features standard in later versions (running the same general
architecture and operating system)?

The speculation is entertaining, even if useless. :)

> > Unfortunately,
> > the same can be said for Commodore with the Amiga. EA sunk a lot of
> > development money into the Amiga but hints about a sub-$500 computer
> > didn't materialize until it was too late for the Amiga to make a full-on
> > hit of the Amiga as a game machine.

True. I think one thing, however, is that the Amiga was a completely
separate product from the 64 (and the Vic-20 before that), much like
the Macintosh was completely separate from the Apple II. It was not
designed to run any of the old software. And maybe this was a part
of its downfall--as we can see today, the most successful platforms are
now extensible and expandable, still retaining most of its compatibility

with the "ancient" programs of its earlier days. If you market a
completely new system, with a completely new operating system with
no backward compatibility, people will give up on you. They may be
willing to make new hardware investments every 2-3 years, but they
are generally *not* ready to abandon all of their old favorite software.

> > Game players are sensitive about not only features but price point.
> > Atari got left in the dust by Commodore, then Commodore lost market
> > share to PC clones. It's unfair to blame EA for abandoning failing

Actually, Apple and Commodore both put the squeeze on Atari. And Atari
just didn't seem to adapt.

> > - Jim Nitchals
> > Apple II port programmer for Archon, Archon II

> Commodore. The PC didn't _really_ catch on until the late 80's, when VGA
> and the clones came along.

VGA and sound cards are what *finally* made the PC a credible gaming
platform, and clones made them affordable. And perhaps above all
else, IMO, as IBM (and the clonemakers) released more powerful systems,
the older ones didn't immediately become obsolete. For the most part,
the new IBM releases were just faster and more powerful versions of their
previous hardware versions. The Atari ST never really caught on with
most Atari 8-bit fans. The Amiga fared a bit better, and Apple has hung on
as a significant niche market.

Even when Atari was "revamping" its 8-bit product line, the "innards" of
the XL and XE machines were essentially the same as those of the old
400. Imagine if IBM released an 8088-based computer as its "new
product" in 1988. Yes, it may have four times the memory as the
original bottom-of-the-line IBM PC, but it still has the 8088. And
no hard drive. And still no VGA. That's the path Atari seemed to
choose for the 8-bit line, and that sealed its doom in my opinion.

A couple of friends of mine are reading this newgroup using a
listserver. Appearantly this listserver no longer sends them the news
from this newsgroup. Does anyone know about any problems with this?
Has the service been cancelled or is this just a local problem?

3106. FOR SALE: Almost complete set of _Atari Classics_ issues

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-27 00:00:00 UTC
From: junkster@coho.halcyon.com
Message-ID: <4od796$h6g@news1.halcyon.com>
Source record: 83633

I have an almost complete set of _Atari Classics_ magazines for sale, everything from the December 1992 premiere (with the subscription form cut out of the back), straight through the most recent January/February 1996 issue. One issue from 1995 is missing. There are 13 issues in all.

Asking price: $20, which includes shipping. Everything is in great condition, except for the subscription form I noted earlier.

James Hague

^^^^^ ^^^ ^^^^^
^^^^^^^ ^^^ ^^^^^^^
^^^^^ ^^^ ^^^^^^
Triple SSS Shareware
====================
```

Triple SSS Shareware is a new Public Domain/Shareware service, specializing in the Atari 8-bit computer. The Atari 8-bit line includes such models as the Atari 400/800/1200XL/600XL/800XL/65XE/130XE/800XE/XEGS. All of our disks will work with a "stock" 1050 disk drive. We endevour to use high quality 5.25 inch disks which are new out of the box. However, we reserve the right to use previously formated disks when necessary. Whatever brand disk we use, you can be assured that your disk will arrive with a clean new disk jacket.

With the departure of "Bellcom" from the 8-bit Atari market, a void was created. Triple SSS has been created to not only meet, but EXCEED Bellcom's high standard of service. Bellcom was considered one of the best Public Domain Shareware services ever to enter the Atari 8-bit market. How is Triple SSS better?

We are glad you asked!

Triple SSS feels that the major strength of the Bellcom library was reliablity. Each program was tested and documented well. However we also feel that the quality of the offerings in the Bellcom library was much lower than the Triple SSS library. Only the highest quality programs make it into the Triple SSS library. Most, if not all of the offerings in our library could be considered "commercial quality".

Triple SSS is operated on a part time basis by two Atari 8-bit enthusiasts. Therefore, you can be assured that Triple SSS will be around, regardless of the level of sales. Bellcom on the other hand, was a "one man show" who required a certain level of sales to continue. Our costs are lower with the advent of Internet technology. We do not print up catalogues on paper at this time. We hope to spread by word of mouth and the Internet.

Triple SSS has always felt that the reason people use a Shareware service is convenience. They do not want the hassles of downloading and copying disks.

We hope to fill a need with only the highest quality Shareware/Public Domain software.

Triple SSS means: Shareware, Software, Support!

For an Email Catalogue, send your request to af332@freenet.hamilton.on.ca

interesting to All about [UK]400/800XL PSUs, compatible alternatives?:

Hello Paul,

PS> Having recently read about one chap who (possibly) fried his 130XE with
PS> a CBM PSU, I'm cautious about slapping any old supply into the
PS> 400/800XL.

Having ascertained the correct voltage and current requirements, slaping "any
old" PSU on the end shouldn't be a problem. I can't help you with the
requirement of the 400 or the 800XL, though.

PS> - XEGS ... These are 800s in nice cases, aren't they?

Not really. More akin to the 65XE, but had Missile Command built in, and a
removeable keyboard.

PS> most of my 2nd hand Atari machines. None of my 4 2600s came with ones
PS> that worked. Fortunately both 7800s have the original PSUs, because I'd

That's because the PSU's Atari supplied were rubbish. They simply weren't up
to being "man-handled". Electrically they were okay, but often constant
plugging and unplugging resulted in broken wiring.

PS> have no idea where to get another of those stupid connectors Atari

I'm not sure what they look like, but you could do worse than try a branch of
Maplins. The staff there are very helpful. They'd probalby have what you're
after.

PS> |Binatone TV Master/ZX81/Spectrum 48K/128K/+2/+2a/+3/QL/2600|

Message-ID: <alexc-2705960029510001@news.3rdplanet.com>
Source record: 83642

OK, I know this has been discussed before, but I wasn't paying attention...

I just picked up an old 800 at Goodwill, and it gives a blank red screen on power-on. I have a few extra 16K RAM boards lying around, and I tried swapping those around with no result. I don't have an extra OS board handy, so I can't try swapping that--I did clean the contacts. (Though maybe not as well as I could have. 8-)

Any suggestions?

Date: 1996-05-28 00:00:00 UTC
From: a00121@alumni.laurentian.ca
Message-ID: <1996May28.095801@alumni.laurentian.ca>
Source record: 83510

Hi,

I'm looking for some of the old Infocom text adventure games in
their original game packages circa 1982-1984. The titles I'm looking for
in particular are the ones that often came in a fairly large folder
(sometimes contained within a box). Two of the games were released in
unusual "boxes" which featured a recessed white face mask on one and the
other in the shape of a flying saucer

The games I'm looking for:

Deadline (folder)
Starcross (flying saucer box
Suspended (recessed white face mask box
The Witness (folder
Planetfall (folder)
Infidel (folder)
Enchanter (folder)
Sorcerer (folder)
Seastalker (folder)

I'd prefer if the games' contents were complete but will still
purchase if incomplete so long as you still possess the folder or box.
Software for any computer system will do whether it still works or not. :)

Thanks,
Dave

> not simply by adding. The result should be a 16-bit unsigned.
> Tnx in advance,
> Christian

This sounds a lot like a job you have to do for school. I'll hint
you. This is ANSI C-code for a shift+add multiplication:

```
int mul(int x, int y)
{
int i, res; /* Reserve two variables */

res = 0; /* Temporary result */
for (i=0; i<8; i++) { /* Loop 8 times */
if (x & 128) /* Is bit 7 set? */
res = res + y; /* Yep, add */
res = res << 1; /* Shift left (multiply by 2) */
x = x << 1; /* Shift left */
}

return res; /* Here we have the result */
}
```

What remains is to convert this to assembly, and if you know anything
about that, it should be easy.

If you want the routine because you need a fast multiply, I can only
recommend doing a tablebased implementation. Some base themselves on
the fact that log(a*b)=log(a)+log(b), while others split the operands
into chunks of say 4 bits to reduce the size of the table.

Greets,

Asger Alstrup

Sorry, not to High Density disks, only DSDD, 720K Diskettes. For
the BlackBox, he has a Floppy Add-on that will read and write a 1.44meg
floppy. Don't know much about this but you can inquire. I left the CSS
address and phone numbers on your previous post here.

Speaking of secret codes, if I remember correctly, if you typed "booga" in Donkey Kong, Jr., you could become invincible and hop levels. Pause the game first, and type it in. I forgot which key was what (been a long time since I played), but one lets you go to the next screen, and one lets you become an immortal, unless you fell. However, the neat thing was if you jumped the level before you actually died, you wouldn't lose a guy. It was a great way to earn a lot of points, but it made it too repetitious all the same.

In Ghostbusters, there was a way to get a lot of money (and therefore buy the best equipment). For the account number, type 1111111 (I forgot how many ones, but type them all in until you can't anymore) and for the password, I think it was "goob." (without the period).

(I'm doing all this from memory, so I might be wrong on the words.)

Odd, I thought most companies would require the author to surrender the
copyright to the company who published the work.

I've always wanted to work at a game company. Instead, I'm stuck doing system/network administration and database stuff for a commercial satellite project. Oh well....it beats the COBOL-based MIS work I was doing a year ago...

In some ways, yes. DLIs made graphics wizardry easy to understand. It would be years before "graphics modes" would be again so easily tweaked and customized.

> I always thought, though, that an actual Atari 8-bit *system* never felt
> as tight as an Apple IIe, with its dual floppy drives that sat on top of
> the case and a monitor on top of those. And 80 columns of text without a
> whole extra peripheral. I would have been very happy if Atari switched to
> a similar set-up.

True. Cables everywhere, some components on the desk and others on the shelves above it, et cetera. On my IIe I had the CPU right under the Duodisk, and the RGB monitor resting above the Duodisk, which made it feel like a compact, *singular* unit, much like some of Apple's Performa models (and the early Macs, for that matter).

I have the 800XL, 1025 and Commodore 1902 monitor on the desktop. Above the monitor on a shelf are two 1050s, and above that (on the "top" of the desk) are the 850 and modem. To the right of the monitor shelf, above the printer, is a rarely-used 1010 recorder. And, of course, SIO cables *everywhere*. It's "electronic spaghetti," but I still love it.

Is there any sort of list of Atari 8-bit games released? I know there is a cart list or two around (where??), but I also want some idea of what was released, NOT on cartridge. Can anybody help? Thanks!

And for those of you wondering what number to type in on Miner 2049er to skip levels, it's listed on the title screen as well as the front of the cartridge.

Jeremy

PS To everyone who helped with Crush Crumble & Chomp -- thanks! It now works, thanks to FOR I=U1 to MT :)

I'm using vterm or vt100 right now with an 800xl and 1200 baud sx212 modem. kinda slow but beats the xm301(300 baud) that I was using. works with usenet news just fine. some web access but nothing great, kinda garbled at times. use it with gopher/vern/jug etc.

hey, does anybody know how I can change the screen colour with this term program(vt-100)? its bright white with blue characters. I'm used to it but it does suck. I can change the colours but not the brightness

This is an interesting thread. I used to love those old EA games for the 800--M.U.L.E., PCS, Seven Cities, One-on-One, etc; and now through some twisted turn of events I ended up working for EA. But that has nothing to do with what I want to say.

I've somewhat different thoughts on what Atari should have done to "upgrade" the 8-bit machines over the years. I'm actually pretty happy with the basic hardware. It's certainly dated in many ways, but it's still possible to do things on a circa 1979 800 that would be tricky on a mid-range 486.

I always thought, though, that an actual Atari 8-bit *system* never felt as tight as an Apple IIe, with its dual floppy drives that sat on top of the case and a monitor on top of those. And 80 columns of text without a whole extra peripheral. I would have been very happy if Atari switched to a similar set-up.

Thanks for the hint, I've just got it, but it seems it implements Small-C,
a C subset. And the code produced may be quite slow too, all the operands
are pushed onto a stack (apart from the top of stack in A and X pair of reg).

In the same place, I've found Ace C, CC8 and DVC. Does someone know how good
they are ? (how fast the generated code is...)

At the title screen, you could type in a phone number to activate a level
select. Not in a hundred years could I ever remember the number. I don't
know it I have it written anywhere...

>a 6 hour expire time on the files.

Time for them to upgrade their HD, mine's been whining about disk space but
still has a 24 hour expire, and is adding four gigs in the next month or two to
extend that. :)

Anyways, that's neither here nor there - the point is, my ISP picks up a
newsfeed from both Sprint and MCI, and neither one shows the existance of any
alt.binaries.comp.* groups, much less .atari8bit. There ARE alt.warez.atari,
comp.binaries.atari.warez, and comp.sys.atari.warez, but all (with the few
recently posted to alt.warez.atari) are empty. There is also an
alt.binaries.warez.atari-st, but no corresponding 8bit (or just plain Atari)
group.

It'd be nice to have somewhere to go to get this stuff, but with these choices,
it might be worthwhile to take a little survey, decide who gets what groups, and
then decide on an "official" group to post in.

The REALLY depressing thing, is those are the only binary groups for general
Atari or 8bit... There are none without the word "warez" in them.

APE, The Atari Peripheral Emulator w/ the amazing ProSystem copy protection
emulation system in now available in version 1.09 and is better than ever!

Go APE today and download it at http://www.nacs.net/~classics

While you are there, check out the new Ape 1.09 and ProSystem 1.50
online HTML documentation!

All registered users may contact me for an update to versions 1.09 of Ape
and 1.50 of the ProSystem. This update is _free_ for all currently
registered users.

New features in Ape 1.09, from the APE109D.ZIP file README.NOW, and a
complete system update :)

Thanks everyone for making the 11th public revision of APE possible!

Steven Tucker

Author of APE: The Atari Peripheral Emulator 1.09 w/ ProSystem
Imagic: The Windows 95/NT Universal Disk Image Generator/Converter
APE ProSystem: The Amazing copy protected disk imager/emulator.
Home Page : http://www.nacs.net/~classics
E-mail : classics@nacs.net

FTED32G.ATR contains the Shareware version of Spartados 3.2f. Spartados
is an advanced _high speed_ DOS system from Fine Tooned Engineering.

WARP_453.ATR contains: MyDos 4.53 System
3x Sio APE+ OS Patch for any Atari DOS
2x Sio Patch for any Atari DOS
MyCopier High Speed (upto 3x sio) sector copier

The .PRO images in this distribution are example PRO System images to
showcase APE's ability to emulation complex copy protection.

Changes Since 1.07

Ape 1.09 and ProSystem 1.50 now support images of
enhanced density and a extension of the .PRO format was
changed to help this along.

You _must_ convert your old v2 .PRO images to v3 .PRO
images or they cannot be used with Ape 1.09. A fast and
automated program, PRO2TO3.EXE is included to convert all
your old images. You can give it a wildcard filespec so

you should be able to convert all your .PRO images in one
pass :)

There have been a ton of internal and visible changes to
the ProSystem. These changes will be documented in the first
version of the ProSystem documentation.

Changes from Ape 1.07 -> 1.09 BETA (As of 5/18/96)

Executable file now smaller because of internal changes in
allocation of dynamic memory vs. the old static method.

Executable now uses overlays for routines that are not time
critical, freeing page space for more features in the main
program.

850 Emulation Fixed - A problem in 1.07 caused a 6502 vector in the
stage 3 handler to point to a BRK instruction (OOPS!).

850 Emulation Fixed - Problem with concurrent I/O dropping out the
instant it starts cured.

Fixed DCM code to allow decompression of double density images, bug
has been in the DCM code since its was written.

PC Mirror: Files written to the PC mirror would fail with a DISK FULL
message after about 400 sectors, fixed. Mirror now supports
capture of files upto 8 Megs.

Writing to a file that already existed in the PC Mirror drive
would cause the program to fail with a device timeout. Mirror
now supports writes to any file, even if it exists.

Files written to the PC Mirror would on rare occasions be
truncated to 125 byte intervals, or have an extra 125 bytes
appended. Fixed.

Files written to the PC Mirror would appear in the default
DOS path instead of the current PC Mirror path. Fixed.

Ape and ProSystem now be more monochrome friendly. If MDA adapters are
detected all screens are displayed in white on black _only_.

Ape 1.07 could be crashed about 10 ways with runtime error 203. This
sloppy memory problem has been fixed and wont happen anymore.

Spartados 3.2x (XF551 version) is now fully supported. Thanks to the user
who sent 3.2x for testing. Problems included failure to format any disk
(floppy or HD). Unknown if this will effect the X cart situation.

When ATR images were created, they could then be mounted on the same
drive as the PC Mirror, caused some interesting effects but is fixed.

When creating ATR images they would appear in the default DOS path if
no path was specified, they now appear in the default ATR/PRO path.

APE ProSystem emulation code rewritten and streamlined, added 5 extra
emulation modes (more coming). ProSystem now _requires_ version 3
format images. See the above instructions for converting your
existing .PRO images.

Many improvments to file selector including better path handling, type
highlighting, drive change entries, visible marker (mono friendly) and
internal changes.

Changes from Ape 1.09 BETA --> Ape 1.09 Full Release (5/24/96)

Ape now includes an XFD conversion utility in addition to an improved
and hopefully now complete DCM conversion utility. Image conversion
is available to all users and is invoked with the 'A' keystroke.

Many users asked for APE to handle commands sent by the Sio2PC program
REMOTE.OBJ. Ape now handles these requests, but obviously you must
use APE keystrokes. Keystrokes accepted for registered users only.

REMOTE.OBJ was created by and is the property of another software author and
is therefore not included in this software package. I'm not aware of
any restrictions on its use, but if it requires some type of payment
for use of course please register it.

You can now select a new ProSystem emulation mode for any image
directly from within APE as of 1.09. This _greatly_ speeds up the
PRO image testing process. Registered users only.

Sometimes the screen was left 'dirty' from previous menus, little dots
at the right edge, etc. Fixed.

The shareware version of APE could crash in the Atascii/Ascii viewer. Fixed.

The file selector has again changed and you should note a signifigant
change to the usage of the 'Additional Extension' option of
configuration menu 3. This option used to specify the extension of
the files to be displayed in the file browser.

This setting _no longer_ perfoms this function. It now specified an _extra_
extension to be displayed in the file browser. ATR and PRO extensions
are now automatically displayed at the proper times. If you have this
option set to '*' I suggest you clear it so you dont have to wade
through tons of usless files to get to your disk images.

Thanks to everyone who sent images, bugs, raves, etc.

Of course a teriffic thanks to all that have registered since 1.07. Most
all the above enhancments are only for you, and I hope they make APE
a better and easier to use product for _you_.

>
>Regards,
>David

David, I don't know about XL-It, but XFormer (PCXf3.x) is a full 130XE/800XL/800 emulator with graphics,sound,i/o, game controller port access, but no cart port access. It works pretty much like a real 130XE. I have 3.0 and really like it. BTW, it has Atari BASIC too. I comes with AtariDOS 2.5 and MyDOS 4.5 disk images (.ATR and .XFD) to start you off. There are other products like the SIO2PC interface, XF cable and such that make it really useful when running on a PC.
If you owne an Amiga, there is a similar emulator floating around for that too. There is a guy that lives near me that is trying to increase its performance and seems to be succeeding. If anyone is interested, e-mail me and I can send you a copy. He also has a nice utility to move files into/out of .ATR/.XFD images from the PC drive(s). I can send that as well.

Josh, I hope you're just kidding here. If not, the Black Box is a PBI/ECI interface unit from CSS (Computer Software Services) that allows XL/XE users to add Hard Drives, Parallel floppie drives, high speed serial and parallel interfaces and much more to their machines. It is pretty mucha a must have for any serious Atari 8-bit user (provided your machine has a PBI or ECI port). I currently use a similar device from ICD called the MI/O or multi input/output box. I couldn't live without it.

I'm trying to write one, but the docs on the .dcm format that I have
appear to be incorrect. Specifically, RLE encoded blocks don't decompress
properly.
If anyone can explain how the RLE blocks are actually encoded, let me
know.

Not so silly. If they don't work in your 130XE, then they don't work. To the
best of my knowledge, any cart for the XEGS will work in a 130XE.

From: Chris_F_Chiesa@cup.portal.com
Message-ID: <152245@cup.portal.com>
Source record: 83540

Lary Mears asks:

> Is there any Atari 8-bit internet software? Seems like it could at least
> be used to read news groups or browse the web in text mode.

Depends what you mean by "internet software." If you mean, "run the newsreader or web browser ON THE ATARI," then no, there is no such animal. The big obstacle is that those utilities generally require that the computer running them BE an Internet node in its own right. That's what actually happens when you use PPP or SLIP to connect to an Internet Service Provider, and run e.g. Netscape Navigator, on a PC. The real problem is that the Atari doesn't have the capability -- or at least, no one has managed to provide it with the capability -- to run the PPP or SLIP connection in the first place. I strongly suspect the software to do this would be so large that either it wouldn't fit into the Atari 8-bit's memory, or, if it did, it wouldn't leave room for the newsreader or web-browser. A PPP or SLIP transport isn't very useful if it doesn't leave any memory for applications which want to USE the transport!

If, instead, you mean, "use my Atari as a text-only terminal and use my Internet Service Provider's onboard text-only newsreader and web-browser (such as Lynx)," then you're in luck. There are NUMEROUS "terminal emulator" software packages for the Atari. For best results with standard Unix-based newsreaders and text-only Web browsers such as Lynx, you'll need a fairly decent VT100 emulator. The best seems to be Ice-T, which requires 128K RAM, therefore an Atari 130XE; next best (IMHO) is Kermit65. There are others of fair-to-middling compatibility. I don't know the specific directory to refer you to, but you can try anonymous FTP to atari.archive.umich.edu. It's generally too busy to let you in, BUT, its "try again later" screen refers you to the archive's Web server, which is generally MUCH more accessible. Give 'em a try. Good luck!

<grin>..
>What would happen if the 'tilde' character was left out by accident, would
you still get through??

Nope... the tilde under Unix means "home directory of user X"... when Unix
hits that, it then goes to its user table and says "OK, the real directory for
~jsmith is /usr/j/jsmith" and sends you there. If the address just said
/jsmith, you'd be pointed to a directory off of the root, so you'd be in the
wrong place...

Time to clean out the basement. All of this 'stuff' has to go, you can
make me an offer on the whole lot or part of it. I will be inclined to
give a much better deal to the person who offers to take it all...

the stuff:

800xl without power supply (works fine, tested with my XE power supply)
1050 disk drive (unmodified) with powersupply/SIO cable works fine
1050 disk drive (not working/fixable?)
Joystick-connect 300 baud modem with manual
SIO-Parallel port (RS-232) cable
Joystick-Parallel port cable

Books:

Compute's Second Book of Atari
Machine Language for Beginners
Atari Sound and Graphics
Mapping the Atari
Atari Basic (thick manual)

I'm will to part with it all for $30 plus shipping.

Ted B

Don't get me wrong: M.U.L.E. and Atari 800's still adorn the living
rooms of my friends *BECAUSE* the playability was so outstanding.
Unfortunately, fewer and fewer people choose to play it instead of
watching the latest video release.

>What if Atari had provided a mass-market 20-40 megabyte hard drive
>early on? What if it speeded up its disk drives so that a game wouldn't
>take two minutes to load?

It could've been done if they'd changed the serial bus design, and/or
been using LZ style compression to cut the load times (no matter what
format they were using!)

We just weren't smart enough back then.

>Actually, Apple and Commodore both put the squeeze on Atari. And Atari
>just didn't seem to adapt.

They were too busy squeezing Atari to notice the PC market sneaking up
behind them.

Source record: 83545

Is there any way to convert an atr back to a dcm for transfer to an atari?
Or else, is there any easy way to make an exact disk copy of an atr?

please help!
thanks, andy.

>If the images are stuff like circuit schematics or other line
>diagrams, though, I suggest bilevel TIFF using packbits or FAX
>compression. Even _I_ could write a viewer for bilevel TIFF display.

Hmm, so could I, as long as I had access to the public-domain TIFF
library -- but TIFF seems like almost "overkill" for saving bilevel
information... The overhead is going to be larger than the data...
On the other hand, it's PORTABLE... though whether the TIFF library
will be portable enough (read: small enough) to fit on the Atari,
is at present an open question. :-)

I suppose I could pick through the TIFF spec and cobble up a limited
TIFF reader that could handle bilevel and nothing else... :-)

Chris Chiesa
Chris_F_Chiesa@cup.portal.com / lvt-cfc@cyber1.servtech.com

I think the whole TIFF library would be heavy overkill. You'd just
have to get the width, and maybe check #bits per pixel and compression
type; and just throw out the rest of the tags. If you use packbits
compression, decompression is cake.

I'm remember seeing/hearing about a mod that could be
made to one of the Atari drives that would make it a
3.5" floppy. Who may sell one of these as a kit or already
modified??

I remember Polar Pierre. Matter of fact, I have it booted up
on my 8bit system right now. It is a sweet game. It's (c)Copyrighted
1984 Datamost, programmed by Ron Rosen, graphics by Art Huff. The
disk version is double sided.

> a similar set-up.

If I remember correctly, the Apple][line needed an 80-column card to do 80 columns, until the //c came out. Or perhaps my memory has grown foggy over the years.

At any rate, I, too, think Atari would have done well to pursue integration of 80-column text capability as opposed to integrating voice synthesis and a modem. If they'd released the 1450XLD with the disk drive enclosures integrated, and with the 80-column capability replacing the voice synthesizer and modem, I think it would have done a lot for the Atari line.

Ah, well. Just another Atari "might have been."

Check out the APE homepage. Steven J Tucker wrote a program for the PC which can convert between .dcm .atr and .xfd. If my memory serves me right, the url is http://seka.nacs.net/~classics. It's also available as a link from my 8bit page, http://nimitz.mcs.kent.edu/~clisowsk/8bit.html.

Good lord if that's what my 130XE actually worked like I think it would be time to ship it to the repair shop. I think it would be safe to say that it works like a badly beaten 130XE or one submerged in water, then turned on. And I wouldn't exactly call whatever noises Xformer makes as sound emulation.

That was AR:C... AR:D tries to do a real format, which the emulator doesn't
support... As I recall, the 1050 duplicator could handle phantom sectoring,
but I don't know of any others... Super Archiver might.

Actually, no. It may well be corrupt, but it runs fine until it needs part
of the data on disk 3, side 1. PC Xformer doesn't emulate SIO, and that causes
it to die after the intro.

Those versions of c produce p-code. Cc65 produces real machine
language. You should experiment with some home made benchmarks. I
did so a few years ago, and wrote an article about the results. I'll
post it here, if I can find it.

Could someone post an atr or a xfd of a blank dungeon disk. So that while
Markus is busy working on the next release, we can play the dungeon on
XL-It (0.13).

On a side note, does anyone remember polar perrie? I had the origanal on
tape, I can't remember the author, but it was a two player ski theme -
platform game, and you could make your own levels! This game was awesome,
but I haven't noticed anyone talking about it.

i want to ride snowballs again, David.

Thanks, David

Let's just say it does function and you can run BASIC programs. You can
play games, and it does do sound and graphics. I haven't heard the
sound part as my copy is running on a machine with no sound card. If
you can get the programs and data files into .ATR/.XFD image format, it
will run them pretty much like a real 130XF (albeit, not perfect, but
close enough for gov't work.)

Source record: 83569

You can convert an .ATR image to a .DCM file by
1) Run the DISKCOM3 program using XFormer on your source .ATR.
2) Then put the new .DCM file into an empty TEMP.ATR image.
3) Then you can use Ivan's IMAGEMAN to extract the .DCM file out of the
TEMP.ATR.
4) Send the .DCM file back to your Atari and just reverse this process.

>thanks, andy.

Although, I haven't done this, you should be able to run DCM from
one .ATR/.XFD image compressing the one you have as your source onto a
third .ATR/.XFD image file then export the .DCM file to where ever. In
other words it SHOULD work the same as if you were working with a real
computer and disk drives.

I still think you're being a bit kind to it. It does run most basic programs,
but that is of very little interest to me. Most games do not work properly
with Xformer [despite the advertising of a near god-like emulation for it].
I can tell you that you're not missing much in the sound department. It's
not emulation of the 8-bit sound, but some crappy translation sound that comes
out of it. Again if it was free, maybe I wouldn't be so hard on it. XL-it's
better already, and that guy hasn't been developing it for 8 years.

I have the 3.0 version and I'm planning on getting 4.0. maybe I'll try XL-It too. I don't have time to play games. Never did play much that way with my 8-bit. I always loved writing BASIC programs, so that was the improtant part for me. I guess, if you want games, APE sounds like the choice, but I don't know. I only use PCXf for running my stuff and it seems to do an adequate job for that. I just wish I could use SpartaDOS and BASIC XE with it. I guess it real thing is still hard to beat. So, on that, I'll keep my 130XE and 800XL handy.

3200. XF2.5- error 138 on printing, help?

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-30 00:00:00 UTC
From: dderby@nyx.cs.du.edu
Message-ID: <4ok7vg$fjk@nyx.cs.du.edu>
Source record: 83577

I am unable to print from the XF2.5 emulator. I can print in MSDOS, go to XF2.5, run a BASIC program that I know works on my Atari, and then it stops when it opens P: (I get device timeout, error 138). I can't copy to the P: device in DOS (same error). I suspect my 286 has some non-standard BIOS calls. I tried loading in a print spooler to see if that might right things (no luck). Has anyone had this problem? Does anyone know of a fix (short of buying another PC)? Any ideas? Thanks.

I assume you mean Atari800 (There are 2 or 3 Linux Atari 8-bit emulators, but Atari800 is the best)

You can download it directly from:

ftp.demon.co.uk/pub/emulators/atari

Or visit my Atari Emulator Web page at:

http://www.users.fast.net/~smol/8bitemu.html

for a link to that and other Atari emulators

Good Luck!

>Battlezone (Atari)
>Bug Hunt (Atari)
>Flight Simulator II (Atari/subLOGIC)

Something is seriously wrong with your 130XE if these games don't work on
it. I have all of these (except Battlezone) and they all work fine on
my 130XE.

In fact, they should work on any Atari 8-bit computer (even the lowly 400)
if you have enough memory.

What happens when you try to run these games?

3203. How is APE?

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-30 00:00:00 UTC
From: jvogel@crl.com
Message-ID: <4okh86$dvs@crl6.crl.com>
Source record: 83580

Hi folks,

I'm looking for comments regarding the functionality of APE. I'm planning on getting some 8-bit software from the net and connecting the old 8-bit via a 300 baud modem is just too slow. Also wanting to transfer 8-bit files from my IBM compatible to the 8-bit.

Here's my set-up:

-Dell 486 DX2 50 running Windows 95.
-28,800 modem.

And on the Atari side, I've got an 800 and a 1050 disk drive.

Any major comments, bugs? Does APE work well?

TIA,
John

Check with your Internet provider to make certain that he has 300 baud
access ... I know here at work the last two generations of modems we
have used had NO support whatsoever for 300 baud ... the latest
generation does not support 1200 baud. We still maintain a very few
older modems, but don't advertise to our users that they exist ...
they only learn of them if they have trouble, ask, and cannot upgrade
their home equipment

3208. For Those asking: Star Raiders II .. Found it! README

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-30 00:00:00 UTC
From: redeye@soreass.net
Message-ID: <31adb55c.141267@news.servtech.com>
Source record: 83585

I found a pretty good ftp site for games:

FTP://SIERRA.VALLEYNET.COM/PUB/USERS/J/JUSTIN/ATARI8/GAMES

They Have Star Raiders II Listed as an Individual file, avoid it as it isn't complete. The File you want is: "GAMES63.ATR" in it is the complete version, with a couple of other games.

BTW, I haven't built an sio2pc cable yet, but when I do, how do I put "ATR" images back on Atari disks?

Thanks

3209. FS/T: Atari 8-bit computer items [05/30/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-30 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4okm1t$a8d@dfw-ixnews6.ix.netcom.com>
Source record: 83586

All VGA FS/T lists are updated weekly and are available on the WWW at
http://www.io.com/~vga2000/

This list was last updated on 05/30/96

NOTE: Screen shots of some of these games are available on my
web site.

I have the following Atari 8-bit software and hardware for sale or
trade.

Everything is sold as is. Unless specified, all items have been
tested and are in perfect working order.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

Buyer has ten (10) days to send payment, and pays all shipping
costs, which will be sent via U.S. Postal Service. The shipping
cost depends on both the weight of the package and the distance
that it is traveling. Buyer has the choice of either first class
or parcel post (which is slower, but cheaper).

Payment must be made in U.S. funds, by either check or money order,
drawn from a U.S. bank branch. Canadian buyers must send a Canadian
Postal Money Order, payable in U.S. funds. This is the only way I
have found to deal with my friends to the north (my bank is very
picky, but the U.S. Post Office will cash a Canadian Postal M.O.)

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$10.00 Astro Chase (Parker Brothers)
$ 6.00 Atari Logo
$ 6.00 Atariwriter
$ 6.00 Basic -- for the 400 and 800

$ 6.00 Basketball
$ 6.00 Computer Chess
$10.00 Delta Drawing (Spinnaker)
$ 7.50 Deluxe Invaders (Roklan)
$10.00 Jumbo Jet Pilot (Thorn EMI)
$10.00 Kids on Keys (Spinnaker)
$10.00 River Raid (Activision)
$10.00 Super Cobra (Parker Brothers)

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1200XL COMPUTER.

This item has not been tested.

$19.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #3

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 65XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$34.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #5

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$32.00

*****

LOT #6

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 9.00

*****

LOT #7

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$24.00

*****

LOT #8

ATARI 800 COMPUTER *AND* ATARI 1050 DISK DRIVE, for parts only!

These items are not working, but might be used as a source of parts
(example: the 800 keyboard and chips).

$10.00

*****

LOT #9

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$29.00

*****

3210. Ape 1.09 Available Now

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-30 00:00:00 UTC
From: dh395@cleveland.Freenet.Edu
Message-ID: <4okshp$kda@madeline.INS.CWRU.Edu>
Source record: 83587

APE, The Atari Peripheral Emulator w/ the amazing ProSystem copy protection
emulation system in now available in version 1.09 and is better than ever!

Go APE today and download it at http://www.nacs.net/~classics

While you are there, check out the new Ape 1.09 and ProSystem 1.50
online HTML documentation!

All registered users may contact me for an update to versions 1.09 of Ape
and 1.50 of the ProSystem. This update is _free_ for all currently
registered users.

New features in Ape 1.09, from the APE109D.ZIP file README.NOW, and a
complete system update :)

Thanks everyone for making the 11th public revision of APE possible!

Steven Tucker

Author of APE: The Atari Peripheral Emulator 1.09 w/ ProSystem
Imagic: The Windows 95/NT Universal Disk Image Generator/Converter
APE ProSystem: The Amazing copy protected disk imager/emulator.
Home Page : http://www.nacs.net/~classics
E-mail : classics@nacs.net

FTED32G.ATR contains the Shareware version of Spartados 3.2f. Spartados
is an advanced _high speed_ DOS system from Fine Tooned Engineering.

WARP_453.ATR contains: MyDos 4.53 System
3x Sio APE+ OS Patch for any Atari DOS
2x Sio Patch for any Atari DOS
MyCopier High Speed (upto 3x sio) sector copier

The .PRO images in this distribution are example PRO System images to
showcase APE's ability to emulation complex copy protection.

Changes Since 1.07

Ape 1.09 and ProSystem 1.50 now support images of
enhanced density and a extension of the .PRO format was
changed to help this along.

You _must_ convert your old v2 .PRO images to v3 .PRO
images or they cannot be used with Ape 1.09. A fast and
automated program, PRO2TO3.EXE is included to convert all
your old images. You can give it a wildcard filespec so

you should be able to convert all your .PRO images in one
pass :)

There have been a ton of internal and visible changes to
the ProSystem. These changes will be documented in the first
version of the ProSystem documentation.

Changes from Ape 1.07 -> 1.09 BETA (As of 5/18/96)

Executable file now smaller because of internal changes in
allocation of dynamic memory vs. the old static method.

Executable now uses overlays for routines that are not time
critical, freeing page space for more features in the main
program.

850 Emulation Fixed - A problem in 1.07 caused a 6502 vector in the
stage 3 handler to point to a BRK instruction (OOPS!).

850 Emulation Fixed - Problem with concurrent I/O dropping out the
instant it starts cured.

Fixed DCM code to allow decompression of double density images, bug
has been in the DCM code since its was written.

PC Mirror: Files written to the PC mirror would fail with a DISK FULL
message after about 400 sectors, fixed. Mirror now supports
capture of files upto 8 Megs.

Writing to a file that already existed in the PC Mirror drive
would cause the program to fail with a device timeout. Mirror
now supports writes to any file, even if it exists.

Files written to the PC Mirror would on rare occasions be
truncated to 125 byte intervals, or have an extra 125 bytes
appended. Fixed.

Files written to the PC Mirror would appear in the default
DOS path instead of the current PC Mirror path. Fixed.

Ape and ProSystem now be more monochrome friendly. If MDA adapters are
detected all screens are displayed in white on black _only_.

Ape 1.07 could be crashed about 10 ways with runtime error 203. This
sloppy memory problem has been fixed and wont happen anymore.

Spartados 3.2x (XF551 version) is now fully supported. Thanks to the user
who sent 3.2x for testing. Problems included failure to format any disk
(floppy or HD). Unknown if this will effect the X cart situation.

When ATR images were created, they could then be mounted on the same
drive as the PC Mirror, caused some interesting effects but is fixed.

When creating ATR images they would appear in the default DOS path if
no path was specified, they now appear in the default ATR/PRO path.

APE ProSystem emulation code rewritten and streamlined, added 5 extra
emulation modes (more coming). ProSystem now _requires_ version 3
format images. See the above instructions for converting your
existing .PRO images.

Many improvments to file selector including better path handling, type
highlighting, drive change entries, visible marker (mono friendly) and
internal changes.

Changes from Ape 1.09 BETA --> Ape 1.09 Full Release (5/24/96)

Ape now includes an XFD conversion utility in addition to an improved
and hopefully now complete DCM conversion utility. Image conversion
is available to all users and is invoked with the 'A' keystroke.

Many users asked for APE to handle commands sent by the Sio2PC program
REMOTE.OBJ. Ape now handles these requests, but obviously you must
use APE keystrokes. Keystrokes accepted for registered users only.

REMOTE.OBJ was created by and is the property of another software author and
is therefore not included in this software package. I'm not aware of
any restrictions on its use, but if it requires some type of payment
for use of course please register it.

You can now select a new ProSystem emulation mode for any image
directly from within APE as of 1.09. This _greatly_ speeds up the
PRO image testing process. Registered users only.

Sometimes the screen was left 'dirty' from previous menus, little dots
at the right edge, etc. Fixed.

The shareware version of APE could crash in the Atascii/Ascii viewer. Fixed.

The file selector has again changed and you should note a signifigant
change to the usage of the 'Additional Extension' option of
configuration menu 3. This option used to specify the extension of
the files to be displayed in the file browser.

This setting _no longer_ perfoms this function. It now specified an _extra_
extension to be displayed in the file browser. ATR and PRO extensions
are now automatically displayed at the proper times. If you have this
option set to '*' I suggest you clear it so you dont have to wade
through tons of usless files to get to your disk images.

Thanks to everyone who sent images, bugs, raves, etc.

Of course a teriffic thanks to all that have registered since 1.07. Most
all the above enhancments are only for you, and I hope they make APE
a better and easier to use product for _you_.

I don't know about SIO2PC, but I tried the APE (Atari Peripheral
Emulator) cable and it worked great! I built my own cable for less than
$10. Check out the APE home page:

http://seka.nacs.net/~classics/

The author requires a $40 registration fee if you plan to use his
software for more than 30 days.

Jason, list the games and people can let you know if they have them working on their
130XE. Then if they don't on yours..... you can at least draw a valid conclusion
about whether yours are bum or not.

Since your having problems with more than one drive you might need to
address another potential problem first. You might be having a hardware
related failure, and that does mess up directories. I will need to know
what type of hardware you are using and the dos software running the system
(ie: mio/adaptec 4000a and mfm drives or Black Box with Scsi drives and
if your using Spartados, Mydos ect.)
Also how long have you been using the sysytem and how old is the hardware..

Actually, I have the pin outs and the complete 850 Manual. It's
just that most people don't really want to mess around making their own
cables if they are available mail order. Besides, I hate typing in numbers.

Rich Mier

3215. Re: converting ATR to .DCM

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-30 00:00:00 UTC

Message-ID: <4ol2e2$s0e@madeline.INS.CWRU.Edu>
Source record: 83592

In a previous article, "summers.61"@osu.edu (Andrew Summers) says:

>Is there any way to convert an atr back to a dcm for transfer to an atari?

If you have access to a machine running Win 95/NT get Imagic 1.04 from
my home page @ http://www.nacs.net/~classics It can generate
ATR/XFD/SCP and DCM images from any format, and the reverse.

>Or else, is there any easy way to make an exact disk copy of an atr?

You mean transfer an ATR to a real atari disk? Use APE and load your
ATR as disk 1, and use any sector copier to copy drive 1 (ape) to drive
2 (a real drive).

If you don't yet have a copy of APE, pick it up @ the URL above. :)

>out of it. Again if it was free, maybe I wouldn't be so hard on it. XL-it's
>better already, and that guy hasn't been developing it for 8 years.

I noticed that Xformer runs really well in 800 mode, most games I tried on it
run. When you switch to XL/XE mode, however, something strange happens. A
lot of things that run in 800 mode don't run. I'm talking about programs
that run on an 800XL without translator disks.

I wouldn't say that XL-It is better, at least not yet. XL-It becomes more
and more impressive with each release, but it still suffers in some ways.
It's still slow for one, although it's much faster than the last release.
It has collision detection problems. In Pac-man, for example, the
ghosts can't kill you!! Xformer, in 800 mode, on the other hand, seems to
run about 80% of the games nearly perfectly.

The XEGS carts I have are:
Rescue on Fractalus
Flight Simulator II
Tennis
Final Legacy
Food Fight
Hardball
Donkey Kong Jr.

These all work fine on my 130XE, although I have not checked them on the other models.

>Maybe there's an adaptor or something. Thanks!

Although that's a great idea, it's unlikely. The video from an 800XL, or any other 8-bit Atari is 60Hz vertical. The SC1224, used with an ST is 70Hz vertical. I wish it would work, as I do have a spare SC1224. Of course, even if it did work, you would lose artifacting because of the greater screen resolution of the SC1224. In other words, some of yours games would have very strange colors from what you expect.

Sometimes on XL and XE machines, the chips that control bank selection get screwed up when kids push and pull carts with the power on. Games that use the newer supercarts that hold old disk based games like Archon will fail in a computer that's been damaged this way. The 130XE in question might have this damaged chip.

3221. Quick 130XE repair question

Newsgroup: comp.sys.atari.8bit

Howdy

I'm the dummy who posted that my XEGS carts wouldn't work on my 130XE.
I finally got them to go, after much "persuasion," but it appears that
the cart slot has some internal loose conneciton on the unit, since any
touch or budge makes the computer flake out.

Anyway, I've got 2 130XEs now (good thing I grabbed a backup unit!).
On one of them, the Start/Select/Option/etc. buttons often don't work
(like now), and the other has the flakey cart slot. I plan on combining
the 2 to get one fully functioning unit. Anybody had experience fixing
either of these problems and can recommend which one I should cannibalize
to get the other one working?

Thanks
-Jason

From: Jeremy Larsen <JEREMY@MUSIC.CC.UGA.EDU>
Message-ID: <30MAY96.23549433.0062@UGA.CC.UGA.EDU>
Source record: 83599

I got a 1027 from a guy a couple years back who said the ink pad was dry. Sure enough, it works but doesn't put anything on paper. What is an ink pad, and are they still around? Where can I get one? Thanks :)

Jeremy

PS Why isn't there a FAQ for this sort of thing? The existing 8-bit FAQ is all about Atari's relation to the internet. What about using the Atari just for the Atari?

3223. Let's talk about building APE/Prosystem cables!

Newsgroup: comp.sys.atari.8bit
Date: 1996-05-30 00:00:00 UTC
From: jvogel@crl.com
Message-ID: <4olo66$7od@crl4.crl.com>
Source record: 83600

I'm looking for any tips you folks can share on building these things. I just got back from Radio Shack and purchased a soldering iron, rainbow wire (4 colors), a DB-9 connector with a hood, a breadboard, the 1489 chip, the venerable "Getting Started in Electronics" by Forrest Mims, III, and lead-free rosin core solder. I'm doing this mostly blindly as I have very little electronics experience, but I think it'll be fun. All I'm missing is the "signal diode" mentioned in the directions for the APE cable - the salesperson said that's not specific enough. Looking at the rack I saw a *lot* of different types of diodes, all with different voltages and materials (germanium, etc). Does anybody who's successfully built the cable know what to get?

The Mims book doesn't tell much about the actual construction of circuits so I'm looking for any tips anyone can share, and perhaps some of you would also be interested in doing it yourself. Let's talk!!! :)

Off to practice some soldering...

John

Yeah, but the ink rollers wear out and don't work that well. I suppose
they can be re-inked, but I stick with the 1025 most of the time.

Good grief, don't articles ever cancel!?!??! I cancelled that dumb post
of mine a while ago...anyway, after some serious contact-scrubbing and
wiggling, I can get the carts to power up. However, it's still _very_
sensitive (i.e., if I tap the computer, the screen flickers and it may
lock up).

I just swapped my usual 130XE for my backup because the start/select/etc.
buttons weren't working...guess this backup computer has a touchy
cart slot--gotta consolidate pieces to get one that works perfectly.

>What happens when you try to run these games?

I usually get BASIC or the self-test, or, sometimes, a screenful of garbage,
sometimes w/ accompanying wacky noises. Actually, I think Bug Hunt
doesn't come up right--all I get is a grayish-blue color appearing on
the screen. The picture is very dull and the game looks mighty primitive--I
think I've seen the game before and don't remember it looking like this--
maybe that cart still isn't making good contact...

Thanks

Hi Atari 8 Bit Maniacs,

it is time to make a mark in your calendar. The greatest Atari 8 Bit Show is in reach. In Oktober will be the great Party/Fair with the the new Polensoft of 94/95 classic games, new old hardware and new informations out of the german ABBUC reginal Groups and world. We hope that F T E has time to jump over the ocean and show some of their famous hard- and software. There is also place for People who want to sell something of their stock call W. Burger. We hope that all people out there make a new JHV 96 Demo or PRg.

Please send your Demo's to:
schallt@worms.fh-rpl.de or
Marek Tomczyk
after you have E-mailed us. As a AtariDSK-File,XFD-file with uuencode or
via post (expensive).

If you give us the rights we will give you a place where they can downloaded via ftp/Internet. All you programmers, Groups, Coders, Atari Maniacs give us a little of your time and make a Demo for the JHV. So if you have any connection to your 8 Bit Atari / Xformer, show that you are here with a Demo or PD Programm for the 8 Bit Atari. Hey girls, are their still any programming? Not only the Boy's can make good Demos. it's time to see more Soft from you, come on you`ve enough time ly on the beach, please code something for the JHV 96. I hope the visitors will see some of our girls like iron maid marian. Aeh we hope to see you girls too.

As far as i know, we are not sure if the fair is held in Herten again. We will write it here or you contact following people look there:

http://www.uni-karlsruhe.de/~Marek.Tomczyk/8bit.html Atario 8 Bit Resort

The Atari would be connected to a real Atari disk drive that is in turn connected to the SIO2PC cable and your PC. As long as the ATR image is the same format as the disk drive, you just use a copy disk option from whatever DOS your running on the Atari. With DOS 2.5, I think it's option J. If the ATR image is not compatible (say it's double density and you only have an 810 drive), then you'd use the Copy option to copy files individually.

3237. modem and SIO2PC (or Turbo Link PC) ?

Sorry to say, but no. I have the original 850 Users manual and it
has the pin-outs of the connectors and a complete set of schematics.
Hummmm, 'Maybe', and this is a big Maybe, I can take it into
work and scan them, just the Pin outs and the schematic. From there I can
bring them home as JPEG, GIF and ???. My son has a Web page and he
has been thinking about adding a Atari section but has nothing to put in it.
Give me a few weeks, maybe I'll be able to give you a good URL to get them
from. Most likely a FTP address, too for those that can't use WWW. I'll have
to think about this some more as .PDF format is the best for WWW users.
Of cours they could be there in multible formats.
Now that I'm thinking about it, maybe the connectors for the XL/XE
also. What format would really be the best for the Atari 8bit? In the past I've
only dealt with GR7, 7.5, 8 and 9 files. I don't know how I could convert GIF
or JPEG into any of these.

Thinking; Rich Mier

This has been talked about and I thought I saw someone post
about 3 months ago about doing just that.
Remember, I am taking this just from memroy: I beleive the person
just used the normal RS232.COM file and a normal Atari Term program like
BOBTERM. Seems like they could run up ot 9600 Baud but at 14.4 they
started dropping bytes and getting garbage here-and-there in the display.

SIO2PC

View this with a monospaced font.

```
x
x-||-x x
I x--x x x-:<-x
I -------------------
I |14 13 12 11 10 9 8|
I | 1489 |
I |1 2 3 4 5 6 7|
I -------------------
I x x x x x
I x
x----------------------x
```

This design was for stripboard, with the strips oriented top to
bottom.
No track cutting is necessary except of course for under the chip to
disconnect the opposing pins. It should all fit easily on a board as
small as about 15 X 15 holes.

The cap C1 in the top left is a .1 micro farad, the diode D1 in the
top right is a 1N914.

Connect the 1489 pins as follows:

1 - Atari pin 5, green wire, DATA OUT

3 - PC pin 2, DATA IN

4 - Atari pin 7, violet wire, COMMAND

6 - PC pin 9, RING INDICATOR

7 - Atari pin 4, black wire + PC pin 5, both GND + join to pin 14 via
C1

8 - Atari pin 3, orange wire, DATA IN via diode D1

10 - PC pin 3, DATA OUT

13 - Join to pin 14

14 - Atari pin 10, blue wire, +5v

The PC pins given are for a 9 pin D. Change for a 25 way as follows:

9 25
- --

2 - 3
9 - 22
5 - 7
3 - 2

You should use a 4 conductor + bare drain wire cable for the PC side
and connect the drain wire from the Atari cable to the PC drain wire
using a spare strip on the board. Connect the drain wire in the PC
cable to GND in the plug going into the PC.

HTH.

Why did you write it in all caps? It won't work that way! (unless you're
on a VMS system which translates everything to lower case, and an address
or filename that contains caps must be written in quotes).

You can get away with the 1 watt zener diodes. (#1N4739, or 42 I believe).
Just make sure you attach the band end in the right direction.

>The Mims book doesn't tell much about the actual construction of circuits
>so I'm looking for any tips anyone can share, and perhaps some of you
>would also be interested in doing it yourself. Let's talk!!! :)

The circuit itself is easy to build because it's self powered. And if you're
good enough you can fit the whole circuit board inside the metal DB25
shielding, just break off a piece of board big enough to hold the chip and
wide enough to be jammed into the DB25 female plug.

Speaking of XE games, my good'ol Atari 800 can run almost all XE games,
including Ballblazer. The funny thing is that the manual says that the
game requires a XE or XL system to run it.

I just replaced the print wheel in a 1027. It was a bear of a job but it
worked afterward. I don't know about Australia but Best Electronics has parts
for the 1027 and other Atari equipment. Price for the print wheel was $25.00
(probably more than the p
rinter is worth but a cute peripheral anyhow). That Atari part number is
FA100676. The address is:

Best Electronics
2021 The Alameda, Suite 290
San Jose, CA 95126-1127

Phone:
408-243-6950

The rubber print wheel will deteriorate faster if the wrong type of ink
contacts it (if you re-ink the rollers you might be pushing your luck).

I have an Original Disk for Spider Eater, with Yellow Label & Red
Letter/Graphics by Koala Technologies to be used with a Koala Pad. But I don't
have Documentation for it including The Template you lay on the Koala Pad that
you need to enter the Game. Could someone Respond, In E-Mail, who can help
me get this Documentation & Template! If you can Help me, please E-Mail me at:

From: ejh7678@isc.rit.edu
Message-ID: <4olfi9$7ej@news.ao.net>
Source record: 83603

Greetings, people.

One of my hobbies is collecting parts and whatnot for my not-so-old atari XEGS system. Recently I got ahold of one of the nice 1027 printers. Cost me four bucks, and seems to be in good condition. Only problem is that it is missing the powersupply. First of all I noticed that the jack in the back is much larger than the ones on either computer or floppy or the little plotter I have. Anyways I can get a new powersupply for it at my local eletronic supply show, but I was wondering what the voltage rateing is for it. I dont want to blow out my newfound treasure. If anyone can e-mail it to me, ill be one happy atari user..

BTW I was quite impressed by this printer. Its size, anyways if its output quality is good. Anyone have any recomended word processors to use on this?

APE works very well indeed. I have had very little problems with it, and I use it with a Hayes ESP on my machine which isn't even a standard com port. It's quick easy to use, and delivers all that is promised. Plus it's the only program I'm aware of that emulates several 8-bit devices on your PC [disk, modem, printer, etc] and has support for copy protected originals.I have 3 8-bits and they all work flawlessly with APE. As far as your software transfers APE will make it a breeze. Anything you get on the PC side can be read from a drive mirror which reads directly from you PC's hard disk and appears as a large floppy to the 8-bit. It was the only way to go for me to archive all my 8-bit disks to safety. Now I don't have to worry about these old floppies any more.

Has anyone had problems running Mule on XL-it and XFormer?

1. On XL-it, I can't see my character in the storehouse where the mules are outfitted.
2. On XF25, I can't reenter the storehouse after I've installed my mule my plot of land.
3. On XF33DEMO, the game loads in but I can't start a game!

Anyone else run into these problems? If so, let me know if there is a fix.
Thanks

-David

Take the keyboard out of the one with the flaky Cart. slot and
put it in the other one.
The fix for the bad START/SELECT/OPTION keys is adding
3 resistors to the bottom of the main board. If you swap the keyboards,
this unit should work properly.
The flaky cart. slot 'Might' require the connector to be replaced.
Depends on if the pins are bent or smashed, OR it could be just broken
solder joints. Still, this requires taking it completely apart.

Hope this helps; Rich Mier

Okay, here are the pin assignments for the parallel port on the 850 interface.
This awful "ASCII Art" diagram is a view looking at the port on the 850, not
of the cable head.

```
------------------------------
\ 8 7 6 5 4 3 2 1 /
\ /
\15 14 13 12 11 10 /
-----------------
```

Atari 850 Pin Centronics
Pin Number Function Parallel Pin Number
---
1 Data Strobe 1
2 Data bit 0 2
3 Data bit 1 3
4 Data bit 2 4
5 Data bit 3 5

6 Data bit 4 6
7 Data bit 5 7
8 Data bit 6 8
9 "data pins pull-up" (+5v) X
10 No connection X
11 Signal Gnd 16
12 FAULT 32
13 BUSY 11
14 No connection X
15 Data bit 7 9

Notes:

The 850 manual says:
"FAULT must be +5 for printer port to operate. If your printer has nothing approriate to connect to FAULT (such as +5 power or some ONLINE-type signal), jumper pin 9 to pin 12. "

The cable I've always used for my printers has 9 jumpered to 12 on the 850 end.

Also, each of these pins have a "return" pin assoctiated with them. I believe that these are tied to ground on most printer interfaces in the IBM world, but I don't know this for sure. The return pins for Strobe and Data0-Data7 are 19-27 respectively (on the printer end). BUSY has a return on 29. There is no return for FAULT.

Another answer that I demoed years ago at the LIAUG (Long Island Atari User Group) meeting is to get either Nickel Print or another conductive paint (one uses silver and comes in a pen type dispenser) Remove the keyboard of the 130 and remove all of the screws from the back. (about 20-25) you will find a plastic sheet that has conductive traces painted on it. Using the silver dispensing paint pen or a small artist brush and the Nickel Print (keep mixing this stuff the nickel is heavy and precipitates out quickly) you can repaint the traces and repair them.
To find the bad spot if you have a meter and set it to its conductivity setting (the one where it makes noise when the probes are touching) you can start at the location where the key makes contact with one of the two pads that it will hit when normally pressed and follow the trace down to the bottom of the connector that plugs into the computer moving a few inches at a time listening for the sound that the meter makes so that you know each segment is conducting. If you see a physical break or lose conductivity you can paint over the bad spot to restore operation.

Be certain when your done painting that you let the paint dry and check that you haven't painted a trail from one trace to another.

If all else fails call Best Electronics at:
(408) 243-6950

He carries replacement keysheets, but they came in more than one style so be certain to talk to Brad about what you need...

Pat.

P.S. LIAUG meetings are still going.. since 1982...

3266. Re: A different 1027 question

Jeremy Larsen (JEREMY@MUSIC.CC.UGA.EDU) wrote:
: I got a 1027 from a guy a couple years back who said the ink pad was
: dry. Sure enough, it works but doesn't put anything on paper. What
: is an ink pad, and are they still around? Where can I get one?
: Thanks :)

: Jeremy

: PS Why isn't there a FAQ for this sort of thing? The existing 8-bit
: FAQ is all about Atari's relation to the internet. What about using
: the Atari just for the Atari?

You have to open the top cover of the 1027 (the clear plastic panel) and
you will see if you look down into the printer 4 wheels of characters
that impact the paper. Just in front of this you will see a cylinder of
black plastic. This is the ink roller. Grab it by both sides and pull up
remmoving it.

Check with Best Electronics (408) 243-6950 or if you need it running now
try rolling the rubber part on a well soaked stamp pad...

Since you have the 1027, I need the specifications off the power supply.
Anyone out there have it?

Pat.

Marc Gorelic Managed to make up an ASCII diagram and posted it for me.
If you do scan the images anyway, and are put in some ftp sight, I
would still be interested to know where they are.

I've very little experience in graphics especially on the Atari side
so I couldn't be much help, but as long as I could view them on the pc
that's all it would matter. (for me, anyway.)

Thank you, and to "all" who have gone to all this trouble,

Dave

I have a set called XFDtools, they'll let you copy individual files to or from
.XFD files. I don't remember where I got them, but they seem to work.

I will put them up on my web page in a couple of days.

It's at http://www.users.fast.net/~smol/8bitemu.html

Atari800 is supposed to be able to read files from the Linux filesystem
via the H: device, but I haven't gotten that to work yet.

Someone I know hooked his Atari up to the net with lynx and 300 baud
(mpp made a lot of modems that connected to the joystick ports) and
emailed the stuff to himself. (YUCKY SLOW!)
At any rate, if you like, I might have the stuff and can email it to
you so you can access it on your Mac. Check out homepage
http://mars.superlink.net/scharles/
See ya!
Also if you or anyone needs images converted over to ATR format, I can
perform that service and send the disks back either as floppy's (Pc
format- should be able to read on most mac's) or email you the
results.

On the question of using Atari 8-bit computers for internet access, you could do worse than Delphi Internet Services Corporation. Delphi will soon be adding slip/ppp access for graphical system users, but has said it will keep all the present text based services too. Delphi is friendly for Atari 8-bit users because of their menu driven system and text based internet navigator. It's much like an ordinary BBS once you learn how to use it. It's possible to download files from internet sites and Delphi's navigator tries hard to put options into menu form for your selection. Each subscriber has a generous file storage workspace and user configuration. The configuration may be set for VT-100 or other terminal types including "unknown". That particular setting works well with an Atari when not running VT-100 emulators. The workspace is where your e-mail is held until you download or read it and where you may upload files to send to others.

I began using Delphi years ago when Analog Computing magazine started putting their type-in programs on Delphi. It was quite a boon to be able to download the programs and games published in the magazine instead of having to spend hours typing them into the computer. Delphi still has the Atari special interest group (SIG) which contains databases with hundreds of programs available for download. There are also SIGs for Apple, Coco, Commodore, IBM/clone, TI-99 and others.

I used an Atari 835 modem then, an even older model than the XM301 mentioned in the original article of this thread. The 835 ran at 300 baud and worked extremely well with 1030 Express, a terminal probram by Keith Ledbetter for the 835, 1030, and XM301 modems. I later used Bob Puff's Bobterm and a 1200 baud modem connected to an 850 interface. I now use the 850 at 9600 buad with a 14.4kb modem. But operation on Delphi is still much as it was with my 835 and access is still available at 300 baud.

Depending upon your location, you may be able to access Delphi with a local phone number through Tymnet or Telenet, or directly in the Boston or Kansas City areas. Delphi's rates include connection through Tymnet and are modem speed independent. Rates are higher during business hours but drop after 6:00 PM local time. For hobby users this isn't a problem. I'll quote the "home time" rates. Two rate plans

are offered. The first is $10 per month plus $3 per month for optional internet access. That includes four hours of connect time. A charge of 6.6 cents per minute ($4 per hour) is added for time that exceeds four hours per month. The other plan is $20 per month plus $3 per month for internet access. It includes 20 hours of connect time. A charge of 3 cents per minute ($1.80 per hour) is added for time that exceeds 20 hours. You can pay by credit card, direct debit from a checking account, or by prepayment.

Delphi's voice phone number is 800-695-4005 for signup info and logon instructions. Contact Tymnet to see if they have a local phone number for your area at 800-336-0149, or Telenet at 800-336-0437.

: like to use with the 'Atari800' emulator, and I imagine that I have to
: stick them in a disk image first...

Place the .bin file in your current directory (make sure the file name
is lower case). If you boot the emulator into DOS you should be able to
run the program without loading it onto a disk image - select binary load
and prefixed the filename with H0: (e.g. "H0:xxxx.bin"). Alternatively
you can copy the file (with DOS) onto the current .xfd or .atr disk.

3284. FOR SALE CHEAP: 800/810,books,games,lots of magazines,freebies

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-02 00:00:00 UTC
From: junkster@coho.halcyon.com
Message-ID: <4or9a4$jrd@news1.halcyon.com>
Source record: 83411

I have a wide assortment of Atari 8-bit stuff for sale, ranging from the common to the collectible. I'm not a dealer, I'm just cleaning house. Everything is priced insanely low so I don't have time to reconsider and keep the stuff.

Atari 800 & 810 disk drive, includes power supplies, RF adaptor, monitor cable, BASIC cartridge, most manuals, plus a joystick or two.
Price: $25 (which includes shipping; I ain't gonna get rich...)

Commodore 1702 Color Monitor--THE monitor for 8-bit computers. Great condition except that that door covering the controls is falling off (no matter, it's usually open anyway). These monitors are hard to come by; they're prized by modern game development houses because almost no one manufactures composite monitors any more. Includes monitor cable. Price: $75 (which includes shipping; weighs a boatload)

Big pile of ANALOG Computing magazines for sale, 48 issues in all from issue #10 until up near the bitter end, with various and sundry missing issues (like the handful of issues I wrote articles for). Condition ranges from "great" to "poor." A number of older issues have the covers falling off from being read frequently.
Price: $20 (which includes shipping)

Cartridges:
Atariwriter (cart, manual, ref. card): $5
Music Composer (cart & manual): $4
Star Raiders (cart only): $2
Missile Command (cart only): $2
Asteroids (cart only): $2
MAC/65 assembler & manual $15

*Two wargames: $3 for both
"The Battle of Chickamauga" & "Rommel: Battles for Tobruk"
Neither seems to have ever been played and they include all boxes & maps & manuals

Games on disk:
Shadow Hawk One (cheesy Star Raiders $1
clone for collectors only; includes
manual & reference card)
*Zork III (disk, box, manual, etc) $2
*Caverns of Mars (APX version, disk only) $1

Books:
Writing Strategy Games on Your Atari, by John White: $5 (Great condition; a good intro to AI for move-based games like chess.

I haven't seen any other books quite like it.)
Inside Atari DOS, by Bill Wilkinson and OSS: $5 (Like new; the
complete source code to Atari DOS)

Free for the asking (I'll even pay shipping):
Drelbs manual
Shamus cassette & manual
Compu-Read 3.0 diskette (from 1979!)
Bunches of 5 1/4" disks to reformat and use
*Astrology diskette (APX)
*Atari 810 Master Diskette & pre-formatted disk (supposed to be in
some "better format than the 810 can create," if I recall)
*Probe One: The Transmitter (lousy BASIC game from Synergistic Software,
disk only. I actually used to work with the guy who wrote this.)
*Family Cash Flow 2.0 (APX; disk & manual)

* = I can't be sure if the disk is still good or not, as I can't test
them right now. I'll refund your money if there's a problem (except
in the case of freebies, in which it doesn't matter).

Shipping is free if the total is $10 or more, otherwise shipping is $1
for the first item and $0.50 for each additional item.

Magic. A circuit *always* needs a capacitor, or you'll get a negative
karmic field. Find yourself tripping up a lot lately? Or getting run
over by buses, that sort of thing? I think you know what I'm saying
here. Fix the capacitor.

It's not emulating an 8-bit, just emulating 8-bit storage and communication devices. You need to hook your 8-bit to the PC with an SIO2PC type cable. You can order a 1489 based cable (which is simple and works great) with the software from Steve or you can build your own cable. IMHO If you've got a real 8-bit and a PC, it;s the ONLY way to go.

The .bin and .com are just regular binary atari files which you can
load from dos (atari or mydos that is). You need to use a program
such as imageman to put them on a virtual disk (.xfd or .atr). The
pro extension is a special copy-protected disk image format used by
APE, AFAIK none of the emulators currently support it. Most of the
games you see in .pro format can also be obtained cracked.

Most (all?) people have access to a PC (or a mac I s'pose) nowadays,
especially if they're on the internet. I'd stick to jpg for
photographic images and gif for line art or single colour images.

3297. APE and UltraSpeed+ OS?

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-02 00:00:00 UTC
From: jeffk914@groucho.roc.servtech.com
Message-ID: <31b21e65.718404@news.servtech.com>
Source record: 83424

Well, finally built my one-chip SIO2PC cable today - worked great, first try, after a little mucking to decide what COM port to use. (It actually co-exists happily on COM3 with a mouse on COM1 and a modem on COM2 - rare, I've noticed.) Anyways, the only thing I've tried with it so far was using APE 1.07 (just d/led 1.09) to run some stuff.

Now, my 130XE is pretty modified - 320K, UltraSpeed+ OS, RAMdisk drive 1 switch, RAMdisk write protect, etc. Has anyone else had any experience using APE with the US+ OS?

For those who haven't heard of it, it's Bob Puff's hot-rod OS setup. It had a switch to choose between three OSs - the original XL/XE, XL-Fix (400/800 with a couple hidden goodies - quick disk menu, sector copier, etc), and the US+ OS, which has a bunch of nice add-ons, such as the ability to turn lots of features (keyclick, disk beep, DMA, etc) on and off on-the-fly. One of the things is that, as the name implies, it has UltraSpeed turned on all the time, which was a really nice feature, especially for full-disk games that would otherwise have to loaded slow.

Anyways, reading seems to work fine - Ape records a "happy read sector" when reading off the drives, and loads everything quite speedily. But when writing, say to format a drive, it gets an error 163 - Ape shows a Happy set write, or something like that (sorry, forgot the exact term). If I turn ultraspeed off for that drive in US+, it writes OK, then I can turn it back on and it'll read it OK.

The really mysterious thing is that, while testing, I tried booting in the XL/XE OS and formatting a test 180K disk image I created. Seemed to work OK - 708 free sectors. Rebooted in US+, and it showed 0000 free sectors. But the 16-meg and the 720K disk image both read fine from US+.

Plus, I don't know if this was the fault of my computer getting old, or the cable, but after playing with it for a while, the computer got touchy about resetting - it'd go to a black screen and hang, never getting to the blue screen. At first, switching OSs helped, then I couldn't get anything in any of them. Hooked in my old bare-bones 800XL, that worked fine. Tried the XE again, it was back to working. It's never done anything like this before... Bizarre.

I wouldn't say it *requires* it. If you've got a shell account and
any kind of modem hookup on the Atari (xm301; PR Connection and hayes
compat. ; etc.) just upload them to your account....then log on with the
Mac and download them all. Of course, at the 300/1200/2400 baud you'll
likely be using on the Atari side, you could spend an entire day uploading
the stuff (like I did).

-Ray

btw, if you're looking for a particular title or two, just ask, and if I
have it, I'll e-mail it.

Source record: 83426

Hello. My name is Peter Sundiata. My brother and I are attempting to install a 40 meg hard drive into an old 8088 computer that my wife bought from Radio Shack about 5 years ago (even for back then it was a rip-off). We no longer have any documentation and are having difficulty with the installation. We were wondering if you knew where we might get information for this attempt. It is an Atari PC3 motherboard with revision # CIO3272. We are wondering what the "w" jumper settings are to enable the board to accept the controller card for the hard and floppy drives. This is opposed to the direct connection to the mother board.

Any information you could provide for us would be most helpful.

Thank You!
Peter Sundiata

While testing an old Atari 1050 after 6 years, I mistakenly used a copy of Seawolf2 and it ATE it for lunch! The diskdrive is working fine now, (I should have used a head cleaner FIRST!) but my FAVORITE game is DEAD!! or is it?? Does anybody have a working image? preferably .ATR format? Maybe I have something of your interest.

Thank You!
ATARI 8-BITS FOREVER!! ***1200xl's LIVE!!!***

>
> Pat.

Power supply for a 1027 is as follows:

9.5V *AC* 40 V Amps

Plug is LARGER than those on standard 400/800 P/S

Hop ethis helps.

Anyone have an XL edition of Mapping the Atari they want to sell?

3306. Value of an ATR-8000 with 2 SS/DD Floppies?

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-03 00:00:00 UTC
From: mckeen@world-one.com
Message-ID: <31b25a60.9778542@netnews>
Source record: 83430

I have an ATR-8000 64k unit with 2 180k Floppies.

The unit has the following features:

16k to 64k Printer Buffer
Floppy Drive Interface for 5.25 and 8" drives
Printer Port
Serial Port
Emulates the Atari 850 Interface Unit

Have Manuals.

Can Emulate CP/m with included software but, I have never gotten it to work.

3311. Update: ProSystem Cable Netlist.

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-03 00:00:00 UTC
From: dh395@cleveland.Freenet.Edu
Message-ID: <4otob9$sth@madeline.INS.CWRU.Edu>
Source record: 83435

To all persons who may be building ProSystem cables from the
documentation on the Prosystem home page (http://www.nacs.net/~classics)
or the PROSYS.DOC file in the first APE109D.ZIP distribution, there
was an important error in the netlist of connections.

This error has been fixed in the new home page, and in the new PROSYS.DOC
found in an update APE109D archive on the ape home page.

FYI, the line for 5.1v Zenier clear end should be
connected to DB25 pin #4, __NOT IC1489 PIN 4__

Sorry for the typo!

Steve

Radio Shack used to sell Atari PCs??? If it has the Radio Shack or Tandy
name on the outside, try the comp.sys.tandy newsgroup, otherwise try one
of the comp.sys.ibm.pc.* groups. Comp.sys.atari.8bit is for Atari's
6502-based computers: the 400, 800, XL and XE models.

3316. Atari 800 gone bad :(

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-03 00:00:00 UTC
From: ksimon@cris.com
Message-ID: <ksimon-0306960246100001@cnc009031.concentric.net>
Source record: 83440

Hi everyone! I am writing for help with an Atari 800. I had an 800 for years and it served me well. Back in 1989 it started giving me trouble, so I took it to a place in San Jose, California that supposedly repaired Ataris.

Instead of repairing it, they swapped it for another unit without my permission. I asked for my original back, but they said it was impossible to trace. Angered, I took the replacement unit home to see if it worked.

It worked for about 40 minutes and then froze. Every time it's in use for more than 30 or 40 minutes, in fact, the screen fills up with garbage and I have to let it "cool down" to use it again.

Unfortunately, two days later, the big quake of 1989 hit, and I never got back to that store to demand a working unit.

To make a long story short (too late!), I want to know if anyone out there knows of a hobbyist or business/user group in the Bay Area to which I could give my Atari for diagnosis. Or does anyone know from my description what the problem part would be?

Any help is appreciated. Thanks!!!

Ken

3317. BINARY to ROM?

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-03 00:00:00 UTC
From: Don Mahurin <dmahurin@donet.com>
Message-ID: <31B2F154.5F5D@donet.com>
Source record: 83441

Hi all,

Does anyone know how to change an 8bit Binary/Executable to a 8k/16k
ROM file.

This would make things more convieniant for Atari800 em.

I remember using Cart copy on my 8bit which went the other way, and
tacked on a binary header, but dont know the size of that header.
(Its different for .COM and .EXC files, correct?)

BETTER yet: does anyone know of some 3 sector header I can tack on the
front of a binary to make it run (Like quickloader, but wouldnt have
directory, it would assume that the binary follows).

What I did was write a script that if you specify a name of a game, like say, Mr. Do, the shell script will copy an .XFD to your directory containing only DOS, and write Mr. Do (or whatever) to the .XFD as AUTORUN.SYS, and then call Atari800 with this new .XFD, and the program you request comes up automatically! Just like having a .rom file, only this works with games that were never available on cartridge too.

3319. unarc

I used to own a copy of Zombies, the cult classic arcade game, for my Atari 800. You had to run around collecting treasures and trying to avoid the zombies. It was really fun in 2-player mode. Unfortunately, my Atari's disk drive and tape drive broke and I had to get rid of them and my Atari. I recently got PCXformer and would be interested in playing it again. Does anyone have a .XFD file of Zombies? Please, I'm desperate.

Introduction
1.1) What is an Atari 8-bit computer?

Usenet
2.1) What is comp.sys.atari.8bit?
2.2) What is comp.sys.atari.announce?
2.3) What is comp.sys.atari.advocacy?
2.4) What is comp.sys.atari.programmer?
2.5) What is comp.emulators.misc?
2.6) What is comp.emulators.announce?

E-Mail
3.1) What is the Info-Atari8 Digest?
3.2) What is INFO-A8?
3.3) How can I retrieve files from FTP sites by e-mail?
3.4) How can I post to Usenet newsgroups by e-mail?
3.5) How can I access the World Wide Web by e-mail?

Software Archives
4.1) What is the University of Michigan Archive?
4.2) What is the Boston Archive?
4.3) What is the PVV Archive?
4.4) What is the ClarkNet Archive?
4.5) What is the Gatekeeper's Archive?
4.6) What is the QACE Archive?
4.7) What is the Polish Demo Archive?

Telnet
5.1) What is the Cleveland Free-Net Atari SIG?
5.2) What is the Youngstown Free-Net Atari SIG?
5.3) What is the National Capital Free-Net Atari Users SIG?
5.4) What is the Victoria Free-Net Atari Computer Users SIG?
5.5) What is the Closer To Home BBS?
5.6) How can I access the World Wide Web by Telnet?

World Wide Web
7.1) What WWW pages support the 8-bit Atari?

IRC
8.1) What IRC channels discuss the 8-bit Atari?

File Formats
9.1) What's this UUEncoding stuff (.uu, .uue files) all about?
9.2) What is an .arc file?

9.3) Okay, how about a .dcm file?
9.4) What is an .xmo file?
9.5) What do I do with .XFD and .ATR files?

Emulation
10.1) What 8-bit Atari emulators exist for other computing platforms?

File Transfer Solutions
11.1) What are the best terminal emulators available?
11.2) Can I read/write 8-bit Atari disks on an IBM-PC?
11.3) Can I read/write MS-DOS disks on an 8-bit Atari?
11.4) How do I transfer files using a null modem cable?

Storage Media
12.1) What 5.25" floppy disk drives are available?
12.2) How can I use 3.5" floppy disks with my 8-bit Atari?
12.3) What do I need to connect a hard drive to my 8-bit Atari?
12.4) How can I use an IBM-PC as a storage device for my Atari?

General Interest
13.1) What's the best DOS for the Atari?
13.2) What hardware has Atari created in the 8-bit computer line?
13.3) What are the power-supply requirements for my Atari components?
13.4) What are the pinouts for the...?
13.5) What BBS software can be used on the Atari?
13.6) What version of Atari BASIC do I have?
13.7) What are the Standards for Used 8-Bit Stuff?

Other Documents of Interest
14.1) What vendors, developers, or publishers support the 8-bit Atari?
14.2) Where is my nearest 8-bit Atari BBS?
14.3) Where is my nearest 8-bit Atari user group?
14.4) How do I use my new or emulated Atari?
14.5) What prominent Atarians are reachable by e-mail?

Subject: 1.1) What is an Atari 8-bit computer?

In order of their release, the Atari 8-bit computers include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System. The 400/800 models were first shown publicly in November 1978 and first sold in 1979. The final machine, the XE Game System, was released in 1987. Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

The following text was written by Chris Crawford and appears in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM, ROM, and a (PIA). However, it also has three special-purpose (LSI) chips

known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

GTIA is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

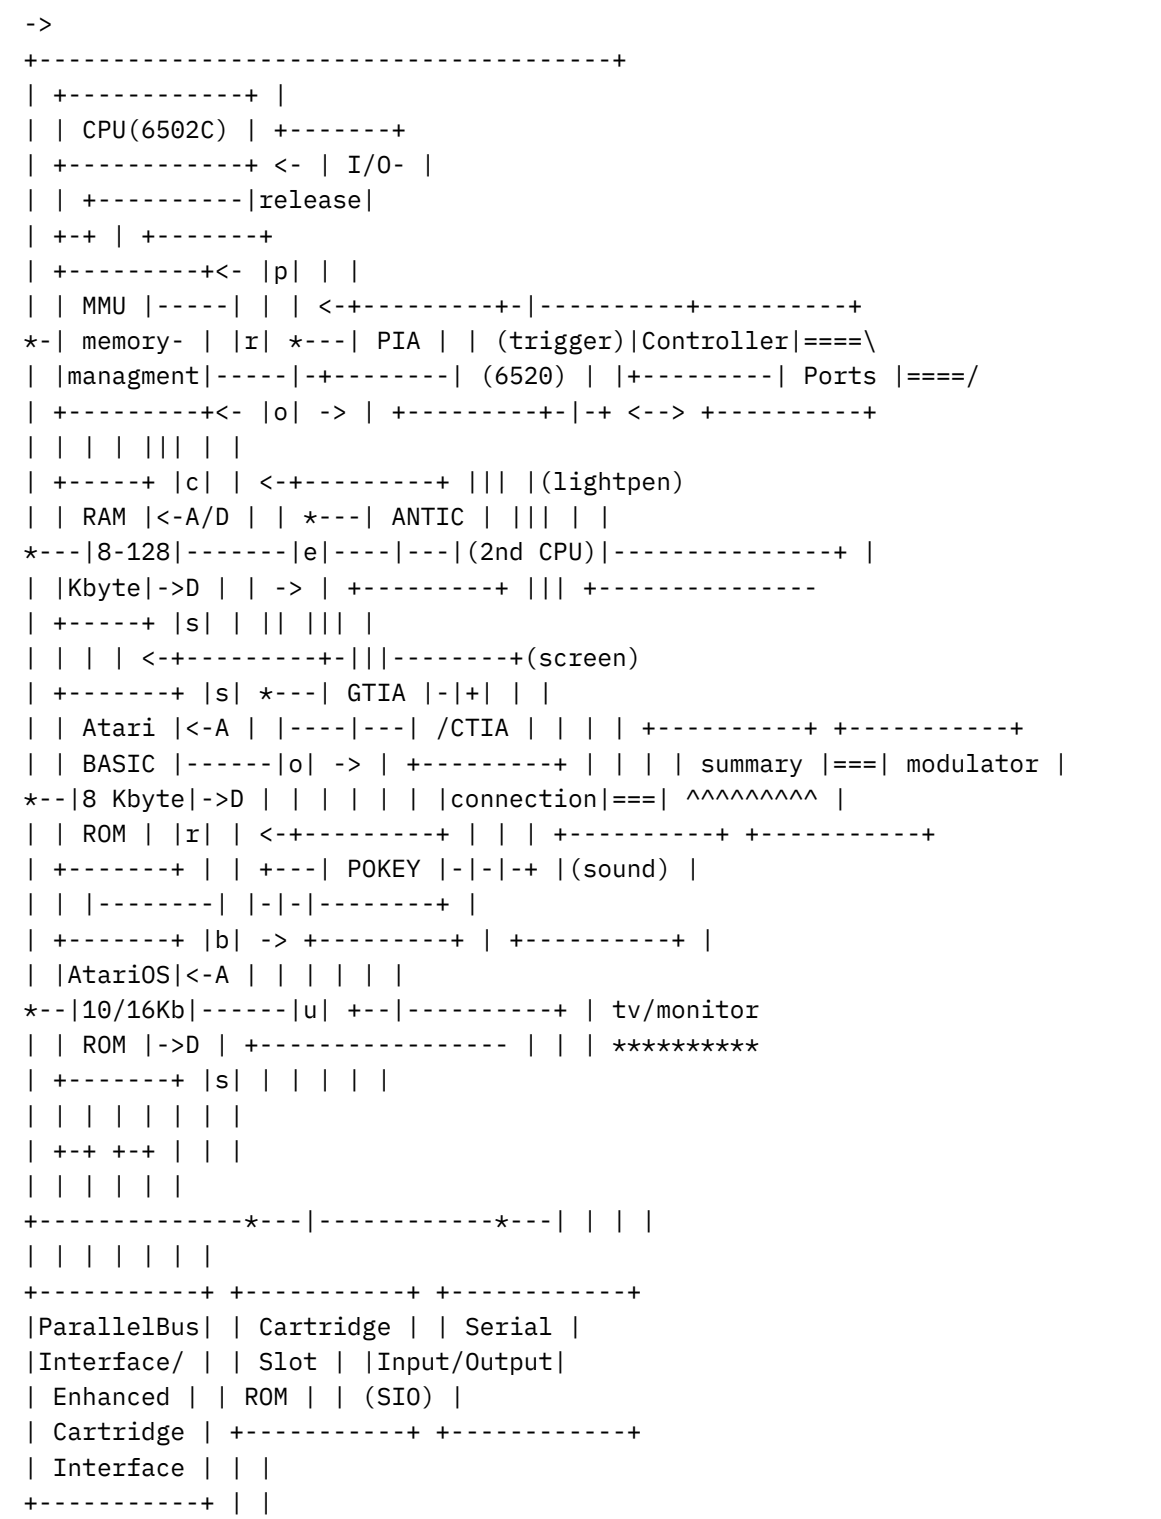
All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to URL:mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "Freddy is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. Freddy also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say freddy does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed

(That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement

With thanks to mailto:peter@soemtron.sb.sub.de (Peter)



| | |
- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800:8/16/48K, 1200XL/800XL/65XE/XEGS:64K, 600XL:16K, 130XE:128K
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

Beginners at using the 8-bit Atari platform may wish to contact Bill Kendrick, URL:mailto:kendrick@sonoma.edu , for his Newbie/Emulator FAQ.

The following is taken from Bill's Newbie/Emulator FAQ.
Graphics:
The Atari has maximum resolution of 320 x 192 (standard, non-overscanned screen) x 2 colors. 160 x 192 x 4, 160 x 192 x 2, 160 x 96 x 4, 160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4 graphics are also supported. 40 x 24 x 256-character (128 normal, 128 inverse, character set indirection available) text mode is standard (2 colors). 40 x 24 x 128-multi-colored-character (4 colors per character allowed, the other 128 characters have 4th changed into a color 5) and 40 x 12 x 128-multi-colored-character screen modes are available. GTIA graphics support 80 x 192 x 16 shade-only, 80 x 192 x 16 hue-only, and 80 x 192 x 9 color screen modes.
Graphics Modes Summarized:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text
2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics
15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen

modes are available.
Screen modes can be mixed (by lines) down the screen using the Display
List - a program which is executed by the ANTIC graphics chip every
screen refresh:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines
Fine scrolling (both vertical and horizontal) can be enabled on any
line on the screen.
All other screen attributes (color, player/missile horizontal position,
screen width, player/missile/playfield priority, etc.) can be ajusted
at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

According to Doug Neubauer (by way of URL:mailto:finneganj@delphi.com (James
Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)
Joe Decuir - Antic and system and creator
A french guy (whose name I forget) - Antic logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design
Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

CLOCK SPEED OF THE 8-BIT ATARI.
NTSC machines: 1.78979 MHz
PAL machines: 1.773447 MHz

[I'd like more system spec's here.]

Subject: 2.1) What is comp.sys.atari.8bit?

If you have Usenet newsgroup access you can access this discussion group through URL:news:comp.sys.atari.8bit . This is an unmoderated newsgroup for discussion about the 8-bit Atari 400/800/XL/XE computing platform. All postings to comp.sys.atari.8bit automatically appear in the Info-Atari8 Digest and in INFO-A8.

comp.sys.atari was split into comp.sys.atari.8bit and comp.sys.atari.st in approximately 1986. To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

comp.sys.atari.8bit is archived by the INFO-A8 list server.

Subject: 2.2) What is comp.sys.atari.announce?

URL:news:comp.sys.atari.announce is the moderated Usenet newsgroup for news items and announcements related to all Atari computing platforms. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari announcements. Moderated by Yat Siu from URL:mailto:lexicor@world.std.com .

Subject: 2.3) What is comp.sys.atari.advocacy?

URL:news:comp.sys.atari.advocacy is the unmoderated Usenet newsgroup for advocating for or against the various Atari computing platforms. If you enjoy making comparisons between Atari 8-bit and other computing platforms, this is the place to do it.

Subject: 2.4) What is comp.sys.atari.programmer?

URL:news:comp.sys.atari.programmer is the unmoderated Usenet newsgroup for topics in programming on the various Atari computing platforms, including the Atari 8-bit.

Subject: 2.5) What is comp.emulators.misc?

URL:news:comp.emulators.misc is the unmoderated Usenet newsgroup for the discussion of emulating computing platforms on other computing platforms. All emulator discussion that does not involve the Apple][, the Commodore 64, or the WINE MS-Windows emulator (which each have their own emulator groups) may be found on comp.emulators.misc.

Subject: 2.6) What is comp.emulators.announce?

URL:news:comp.emulators.announce is the moderated Usenet newsgroup for news items about emulating one computing platform on another. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari emulator announcements. The moderator may be contacted at URL:mailto:emulators-request@qualcomm.com .

Subject: 3.1) What is the Info-Atari8 Digest?

If you have Internet e-mail access you can access this discussion group through the Info-Atari8 Digest.

The Info-Atari8 Digest originates from

URL:mailto:atari8@netcom.com

Subscription requests should be sent to the above address with the subject:

SUBSCRIBE | UNSUBSCRIBE (that is, one or the other)

The first line of the body of the letter should be the person's full name followed by his/her mailing address. For example:

Mike Todd snyder10@convex1.tcs.tulane.edu

To contribute to discussion threads in the Info-Atari8 Digest, or to start a new thread, send your posting to:

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in INFO-A8.

Note that any posting sent to atari8@netcom.com will NOT be cross-posted to comp.sys.atari.8bit, so don't send your posting there. The Moderator hopes to correct this in the future.

The Info-Atari8 Digest is archived by the INFO-A8 listserver.

Recent copies are also kept at URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason Duerstock.

The Info-Atari8 Digest Moderator is Mike Todd, URL:mailto:snyder10@convex1.TCS.Tulane.EDU .

Subject: 3.2) What is INFO-A8?

If you have BITNET or Internet e-mail access you can access this discussion group through INFO-A8.

The BITNET subscription commands are:
tell listserv at marist register <your real full name>

tell listserv at marist subscribe info-a8

The Internet subscription command is:
URL:mailto:listerv@vm.marist.edu where the message says
subscribe info-a8 <your real full name>

To contribute to discussion threads in INFO-A8, send your posting to

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in the Info-Atari8 Digest.

Any postings sent to info-a8@vm.marist.edu or to INFO-A8@MARIST will not reach comp.sys.atari.8bit, so don't send your postings there.

You may leave the list at any time by sending a "SIGNOFF INFO-A8" command to LISTSERV@MARIST, or by sending a message to URL:mailto:listserv@vm.marist.edu that says "unsubscribe info-a8". Please note that this command must NOT be sent to INFO-A8@MARIST or to info-a8@vm.marist.edu.

---The archive of comp.sys.atari.8bit, the Info-Atari8 Digest, and INFO-A8---

You can obtain a list of the available archive files by sending an "INDEX INFO-A8" command to LISTSERV@MARIST or by sending a message to URL:mailto:listserv@vm.marist.edu that says "index info-a8". These files can then be retrieved by means of a "GET INFO-A8 filetype" command, or by using the database search facilities of LISTSERV. Send an "INFO DATABASE" command for more information on the latter.

Recent copies are also kept at
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason Duerstock.

The INFO-A8 Moderators are:
HARRY@MARIST (A Harry Williams)
URL:mailto:ravi@mcnc.org (Ravi Subrahmanyan)
URL:mailto:billw@score.stanford.edu (Bill Westfield)

INFO-A8 was created on December 9, 1986.

Subject: 3.3) How can I retrieve files from FTP sites by e-mail?

There are several general-purpose FTP mail-servers. These may be used to retrieve any files available from anonymous FTP sites on the Internet.

1) mailto:ftpmail@decwrl.dec.com with no subject line, and two-line body with line 1 help and line 2 quit

2) mailto:ftpmail@grasp.insa-lyon.fr (body: help) Please, European users only.

3) mailto:bitftp@pucc.princeton.edu (body: help or ftplist for a
list of anonymous ftp sites)

Of the mail-servers listed here, I recommend this "BITFTP" server. To help you
get started using it, try this example of retrieving files from the Umich
Software Archives (through the barnone.citi.umich.edu mirror site). Send a
message to bitftp@pucc.princeton.edu that says exactly:

```
ftp barnone.citi.umich.edu
user anonymous
cd atari/8bit
dir
cd Telecomm
dir
get ft80v037.txt
get icet.txt
binary
get ft80v037.arc
get icet.arc
quit
```

4) mail BITFTP@DEARN or to mailto:BITFTP@vm.gmd.de (body: help or
ftplist for a list of anonymous ftp sites) (Europe only)

Subject: 3.4) How can I post to Usenet newsgroups by e-mail?

From the internet-services/access-via-email FAQ, maintained by "Doctor Bob"
Rankin.

Mail the text of your post to:

```
group.name-news@newsbase.cs.yale.edu
group.name@pubnews.demon.co.uk
group.name@dispatch.demon.co.uk
group.name@paris.ics.uci.edu
group.name@crs4gw.crs4.it
group.name@berlioz.crs4.it
group.name@magus.dgsys.com (unverified)
group.name.usenet@hkucs92.air.org (unverified)
```

For example, to post to comp.sys.atari.8bit, you might send your
message to:

```
comp.sys.atari.8bit-news@newsbase.cs.yale.edu
```

Be sure to include an appropriate Subject: line, and include your real
name and e-mail address at the close of your note.

Subject: 3.5) How can I access the World Wide Web by e-mail?

Swiped from the WWW FAQ, which is maintained by mailto:boutell@netcom.com
(Thomas Boutell), here is how to access a web page by email:

mailto:server@mail.w3.org (preferred) or to
mailto:listserv@info.cern.ch (older address) containing
the following single line. (What you put on the subject line doesn't
matter; blank is OK. This line should go in the text of the message.)
You will receive as a reply a simple page intended to help you learn
more about the Web.

send http://www.earn.net/gnrt/www.html

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of
files for many computing platforms, including the Atari 8-bit computers. For
more information:

Jody Lenn, mailto:lenn@atari.archive.umich.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich
Archive. The Archivists request you use these mechanisms in this order of
preference:

1) The number one way to get into the UMich archives is via AFS. If you have
AFS, all our files are kept in the directory
"/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT!
Specifically, use:

URL:file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software
Archives" choice. Specifically, use:

URL:gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
URL:gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
URL:gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
URL:gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari
/8bit

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

URL:http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
URL:http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

URL:ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are several mirror sites which are all updated from the home site regularly:
URL:ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
URL:ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
URL:ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
URL:ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
URL:ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
URL:ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files (.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You might also suggest what permanent 8bit subdirectory you'd like your file to end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files (.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less) and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please name the parts in the subject line. This is really helpful as the parts usually don't arrive in the proper sequence. Also, please include a message labeled "file transmission," containing a short description of the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to have seen no uploads for years, but there are some files here that aren't

on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no (Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate directory. Please include a readme file with each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson, mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock: ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari 8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the QACE Archive?

The Queensland Atari Computer Enthusiasts have a fairly large FTP site. It is located in Australia and is the local internet sight of Super Products. Contact James Bradford, URL:mailto:sup8pdct@closer.brisnet.org.au for more info.

URL:ftp://203.4.149.98/8bit

Subject: 4.7) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only)
on a Atari 8-bit.
If You have any comments, write to:

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

The Cleveland Free-Net is the hub system of the NPTN, the National
Public Telecomputing Network. It can be accessed by any of the following:
telnet://freenet-in-a.cwru.edu, telnet://freenet-in-b.cwru.edu, or
telnet://freenet-in-c.cwru.edu (129.22.8.32 or 129.22.8.51).
Type "go atari" to reach the Atari SIG.

Those who add their names to the Atari SIG user directories are
automatically members of the official Atari user group C.A.I.N. - Central
Atari Information Network.

The Cleveland Free-Net Atari SIG publishes the CAIN Newsletter, maintains
the CAIN Home Page on the WWW, and keeps the "Who's Who in the Atari
Community E-Mail Directory" listing. Send correspondence and press
releases to mailto:xx004@cleveland.freenet.edu (Atari SIG).

Subject: 5.2) What is the Youngstown Free-Net Atari SIG?

Youngstown Free-Net (Youngstown, Ohio USA)
telnet://visitor@yfn.ysu.edu (192.55.234.27)

Type "go atari" to reach the Atari SIG. Write to
mailto:xx140@yfn.ysu.edu for more information.

Subject: 5.3) What is the National Capital Free-Net Atari Users SIG?

National Capital Free-Net (Ottawa, Canada)

Internet access to NCF is via

telnet://guest@freenet2.carleton.ca (134.117.1.39) type "go atari" at any menu
telnet://guest@freenet3.carleton.ca (134.117.1.22) type "go atari" at any menu
gopher://gopher.ncf.carleton.ca and choose:
'National Capital Freenet (NCF) Information by Gopher'
http://www.ncf.carleton.ca/freeport/sigs/computer/atari/menu/

This is the Atari computer(*) users special interest group.

Select the Bulletin Board for the latest Atari related news on the SIG
To get information on the other options select the menu option in question
and read the ABOUT message.

For more information, please contact Jack Kitowicz (ac382) on the
National Capital FreeNet. Comments & Suggestions for improvements to the
Atari SIG are always welcome.

Subject: 5.4) What is the Victoria Free-Net Atari Computer Users SIG?

Victoria Free-Net (Victoria, Canada)

telnet://guest@freenet.victoria.bc.ca (199.60.222.1)

type "go atari" at any menu

Facilitators: Gord Hooper (mailto:ua558@freenet.victoria.bc.ca)
Ted Skrecky (GCACE Librarian)
(mailto:ud264@freenet.victoria.bc.ca)

The aim of this SIG is to assist Atari Computer users. We can provide
assistance with XL/XEs, STs, and Falcons, whether you are a new or
experienced user.

Subject: 5.5) What is the Closer To Home BBS?

Kept by mailto:Dave.Blears@closer.brisnet.org.au (Dave Blears), this is a
BBS in Australia which supports the 8-bit Atari.

telnet://guest@closer.brisnet.org.au (203.4.149.97)

Subject: 5.6) How can I access the World Wide Web by Telnet?

This section swiped from the WWW FAQ, which is kept by
mailto:boutell@netcom.com (Thomas Boutell).

An up-to-date list of these is available on the Web as
http://info.cern.ch/hypertext/WWW/FAQ/Bootstrap.html and should be
regarded as an authoritative list.

telnet://telnet.w3.org
A telnettable browser provided by the W3 coalition.

telnet://www@www.cc.ukans.edu
Offers Lynx, a full screen browser which requires a vt100
terminal. Log in as www. Does not allow users to "go" to
arbitrary URLs, so GET YOUR OWN COPY of Lynx and install it on
your system if your administrator has not done so already. The
best plain-text browser, so move mountains if necessary to get
your own copy of Lynx!

telnet://www@www.njit.edu
(or telnet 128.235.163.2) Log in as www. A full-screen browser
in New Jersey Institute of Technology. USA.

telnet://www@www.huji.ac.il
A dual-language Hebrew/English database, with links to the rest
of the world. The line mode browser, plus extra features. Log
in as www. Hebrew University of Jerusalem, Israel.

telnet://sun.uakom.cs
Slovakia. Has a slow link, only use from nearby.

telnet://www@info.funet.fi
(or telnet 128.214.6.102). Log in as www. Offers several
browsers, including Lynx (goto option is disabled there also).

telnet://www@fserv.kfki.hu
Hungary. Has slow link, use from nearby. Login is as www.

Subject: 7.1) What WWW pages support the 8-bit Atari?

Subject: 8.1) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

==> #classic - Classic Games and Systems Collectors.

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) Okay, how about a .dcm file?

A .dcm file is a format unique to the 8-bit Atari which is used to convert entire disk images into files. To work with .dcm files on the Atari you'll need:

Disk Communicator 3.2 by Bob Puff.
filenames: Archivers/dskcom32.arc or Archivers/diskcomm.arc (same thing!)

Subject: 9.4) What is an .xmo file?

.xmo stands for XMODEM. The idea was that the file was not plain text, but was a binary file. As a binary file, it had to be downloaded using a file transfer protocol such as XMODEM. The use of ".xmo" as a filename extender was popular once, but has been discouraged for years.

Subject: 9.5) What do I do with .XFD and .ATR files?

These are two standard formats for Atari disk images used by the various Atari emulators running on other types of computers.

The .XFD format originated with the ST Xformer emulator;
the .ATR format originated with the SIO2PC utility.

Preston Crow keeps a small site filled with the latest utilities for manipulating Atari disk images with non-Atari computers:

URL:ftp://ftp.cs.dartmouth.edu/pub/crow/atari/

Subject: 10.1) What 8-bit Atari emulators exist for other computing platforms?

These are the five emulators that are usable.

1) ST Xformer 3.0, from Branch Always Software, for the Atari ST.
URL:http://www.halcyon.com/brasoft/

2) PC Xformer 3.5, from Branch Always Software, for MS-Windows.
URL:http://www.halcyon.com/brasoft/

3) Rainbow, by Chris Liam, for the Macintosh
URL:mailto:lamcw@aston.ac.uk
URL:http://www.aston.ac.uk/~lamcw/emulators.html

4) Atari Emulator for Unix and Amiga, by David Firth
Latest version: 0.3.3
URL:mailto:david@signus.demon.co.uk
URL:ftp://ftp.demon.co.uk/pub/emulators/atari/ (158.152.1.44)

5) XL-It! 0.12, by Markus Gietzen, for MS-DOS
URL:mailto:magi@stud.uni-sb.de
URL:http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html

---

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None

Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T 2.7 XE (128K) or 1.1 (48K) by IceSoft (Itay Chamiel)
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: XMODEM download
Autodial: Yes (2.7 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.7 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.7 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation
available from mailto:brucka@eruvin.jct.ac.il

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have

]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad M.Kokoszkiewicz (KMK), mailto:conradus@plearn.edu.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:preston.f.crow@dartmouth.edu ,
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software
Services (see the companion vendor/developer list), allows both low
density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe
Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard
floppy drives to be used on the Atari. A utility is included to
read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on
each computer. The RS 232 ports need to be connected
together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be
connected. Just cross the transmit and receive lines
and join the grounds together. (Transmit is pin #2,
receive is pin #3 and ground is pin #7 on the 25-pin
port.)

The right hand pin on the 'long' side of a female 'D'
connector is #1. There are 13 holes on this 'long'
side, 12 holes on the 'short' side. The numbers go from
#1 on the right to #13 on the left on the 'long' side
and from #14 to #25 from right to left on the 'short'
side. #25 is closest to being under #13. A male

connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C port.
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o
25 14

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed but also pins 4 and 5 as well as 6 and 8. Or better yet, make a true 25 wire, straight through cable and use a commercial null modem. A commercial null modem is just a small device with the correct lines already crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB

- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades
- Floppy Board
- Percom drive upgrades

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Fast but still relatively slow I/O, kludge through joystick ports for 800. Rare

==> K-Products KPI Hard Disk Drive Interface (formerly from Supra)
Some limitations on drive type and size and total number of drives in sys.

==> Fine Tooned Engineering Multi I/O (formerly from ICD)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Computer Software Services Black Box
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface from Konrad M. Kokoszkiewicz and Jacek Zuk
- two IDE drives can be handled as well
- up to 8388607 logical sectors per drive
- up to 8388607 logical sectors per partition
(limited to 65535 by existing disk operating systems)
- up to 15 partitions simultaneously
(limited to 9 by existing disk operating systems)
- up 58 kilobytes per second in read or write operations
(limited to 32/7 in read/write operations by existing operating systems)
- native IDE mode for a future disk operating system
- emulation mode for existing DOSes like MyDOS, SpartaDOS, BWDOS.
- booting from any partition (even on machines with non-upgraded XL OS)
- write-protection feature
- executing non-DOS software from a hard drive partition
- the partitions may be created freely (there aren't fixed partitions)
The interface operates as normal PBI device and has a connector for 130XE
computers (and other, those have such connector). Tested with various
Western Digital, Seagate and JVC drives. Compatible with the MyDOS 4.50,
SpartaDOS 3.2g, SpartaDOS X 4.20, BWDOS 1.10 and a lots of DOS applications,
demos and games.

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

Subject: 12.4) How can I use an IBM-PC as a storage device for my Atari?

Original by Dave Paterson

SIO2PC is a cable and software combination that lets you use your PC as up
to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to
16 megs. SIO2PC also lets you redirect the printer output to your PC

printer or to a file on the PC. High speed drives are emulated (a la US Doubler).

All these functions are transparent at the Atari end; you never notice the difference between SIO2PC and regular drives, except that the SIO2PC drives are faster than any others (except Ramdisks and PBI interface drives).

SIO2PC 4.04 is shareware by Nick Kennedy.
filename: sio404.zip

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system. MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/ developer list); MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missle Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.

820 Printer -40 col.
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige &
black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801
1030 Direct Connect Modem -300 baud, with ModemLink software
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, with XE Term software
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari
components?

As with the rest of this FAQ list, please let me know if any of this
information conflicts with the units you have. I'm also not sure how much
of this section is valid outside North America. If it's not valid where

you are, I need to hear from you!

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:
1030

9 V AC ???? VA (??? A) Atari#CO61516 transformer:
1010
9 V AC 15.3 VA (1.7 A) Atari#CO14319 transformer:
400,800,822,850,1010,1200XL
9 V AC 18 VA (2.0 A) Atari#CA014748 transformer:
400,800,810,822,850,1010,1200XL
9 V AC 18 VA (2.0 A) Atari#CA016804 transformer:
400,800,810,822,850,1010,1200XL
9 V AC 31 VA (3.4 A) Atari#CO17945 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551
9 V AC 50 VA (5.6 A) Atari#CA017964 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551

9.5 V AC 40 VA (4.2 A) Atari#CO61636 transformer:
1027

24 V AC 3.6 VA (150 mA) Atari#CA016751 transformer:
830

5 V DC 1.0 A (5.0 W) Atari#CO70042 adapter:
65XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CO61982 adapter:
600XL,800XL,65XE,130XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CA024814 adapter:
600XL,800XL,65XE,130XE,XE Games System
5 V DC ??? A (??? W) Atari#CO81982 adapter:
XL/XE

6 V DC 300 mA (1.8 W) Atari#??????? adapter:
"410P"

9 V DC 500 mA (4.5 W) Atari#CO16353 adapter:
XEP80,SX212,2600
9 V DC 500 mA (4.5 W) Atari#CA014034 adapter:
XEP80,SX212,2600

9.3 V DC 1.93 A (18 W) Atari#CO18187 adapter:
Indus GT,5200

11.5 V DC 1.95 A (22 W) Atari#CA019141 adapter:
Indus GT,5200

5 V / 12 V DC 1.1 A (5.5 W / 13.2 W) Atari#CO62297 adapter:
1400XL,1450XLD

These draw their power from the SIO +5 V:
XM301 (60 mA),XC12,ICD/FTe P:R:Connection

Draws power from the 600XL PBI:
1064

These have built-in power supplies (plug directly into the wall):
410,815,820,825,1025,1029,XMM801,XDM121

The power supply requirements for the following are still needed:
??? V DC ???? A (???? W) Atari#CA060535 adapter:
835

XC11 program recorder (no brick needed -> internal or SIO source?)

OTHER:
The ICD/FTe Multi I/O (MIO), all versions, can use both AC and DC supplies. But stick to voltages of at least 6.2-7.2 V.

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and

export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which
it refers to as "OASIS PAL modules". This OASIS demo module comes with an
excellent message system. The OASIS file system is one of the most
complicated that I have ever seen. It consists of "file libraries" with
suites of "file types". There is quite a bit of overhead involved in
performing a download (which may be a good thing, as it discourages file
hogs). There is a commercial version of OASIS called "OASIS IV" that
performs networking. There was an OASIS network between Boston,
Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word
of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank
Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial
programs. I haven't heard anything about OASIS IV and CARINA for a while,
but PRO!-BBS is still a viable commercial enterprise last that I had heard.

Subject: 13.6) What version of Atari BASIC do I have?

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A

234 C

Subject: 13.7) What are the Standards for Used 8-Bit Stuff?

Developed by mailto:b.poehland@genie.geis.com (Ben Poehland)

When selling used 8-bit Atari equipment in the comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group, please consider describing the condition of the materials you are selling using these standards. This will go a long way toward preventing potentially highly-contentious misunderstandings. Usage is voluntary, but recommended.

LN (Like New)-- Item is pristine, unused, w/all manuals & original packaging materials.
EC (Excellent Condition)-- Item is little used, good working order, physically clean, may have a very few minor cosmetic blemishes, w/original manuals.
GC (Good Condition)-- Item is in good working order but slightly soiled, contains worn parts or minor scratches/dings that betray heavy service or old age, w/original manual or copied manuals.
FC (Fair Condition)-- Item in working order but missing manuals/accessories; heavily worn/soiled or cosmetically damaged.
BC (Basket Case)-- Item does not work, is damaged/butchered, missing manuals & accessories etc., but contains salvageable parts.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." The latest version may be obtained in the following locations, among many others:

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev
http://www.cis.ohio-state.edu/hypertext/faq/usenet/atari-8-bit/vendev/faq.html
news:comp.sys.atari.8bit news:comp.answers news:news.answers
mailto:mail-server@rtfm.mit.edu , message says:
send usenet/news.answers/atari-8-bit/vendev
quit

You can also ask me for a copy at mailto:mcurrent@carleton.edu

---

Subject: 14.2) Where is my nearest 8-bit Atari BBS?

Rick Detlefsen is presently compiling a new comprehensive Atari computers bulletin board systems list. Contact him by any of the following for more information:

Rick Detlefsen Compuserve:74766,1561
Genie:R.DETLEFSEN
Internet: mailto:74766.1561@compuserve.com

Or by Mail: ATARI BBS LIST
C/O RICK DETLEFSEN
8207 BRIARWOOD LANE
AUSTIN, TX 78757-7642

Subject: 14.3) Where is my nearest 8-bit Atari user group?

Rick Detlefsen is presently compiling a new comprehensive Atari computers user groups list. Contact him by any of the following for more information:

Rick Detlefsen Compuserve:74766,1561
Genie:R.DETLEFSEN
Internet: mailto:74766.1561@compuserve.com

Or by Mail: USER GROUP SURVEY
C/O RICK DETLEFSEN
8207 BRIARWOOD LANE
AUSTIN, TX 78757-7642

Subject: 14.4) How do I use my new or emulated Atari?

"The Unofficial Atari 8-bit New User, Emulator Help FAQ" is maintained by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick). Bill and his FAQ are excellent sources for information on basic usage of the 8-bit Atari, and for information on the 8-bit Atari emulators which run on other computing platforms. See:

http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html

Subject: 14.5) What prominent Atarians are reachable by e-mail?

The "Who's Who in the Atari Community E-Mail Directory" includes people involved in all of the Atari computing and gaming platforms. This directory is maintained by the managers of the Cleveland Free-Net Atari SIG. Write to mailto:xx004@cleveland.freenet.edu (Atari SIG) or see:
http://ace.cs.ohiou.edu/personal/mleair/whos_who.html

Sound like the CPU chip has a heat problem. The 800 used the
original 6502 so if you can find one it shouldn't be that expensive. Try:

American Techna-Vision
15338 Inverness St.
San Leandro.Ca. 94579

Orders: 1.800.551.9995

I just want to thank you for the informaiton, but also to let you know that the address and phone number you gave me are no longer correct. I looked them up, and here's their current info:

American Techna-Vision
1903 Fairway Drive
San Leandro CA
(510) 352-3787

They are supplying me with replacement chips. Now I just have to find someone who is willing to install them!

:)

No, the PRO cable does use a ICL232 (or MAX232) not a 1489. There's quite a
difference between the two chips.

A lot of programs were made with only the 800 in mind. The XL's and XE's were
slightly different, and the fact that some programs don't like those modes
reflects this.

You have not trully lived, till you have died.
Shadowman.

3347. New version of Imageman

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-04 00:00:00 UTC
From: Ivan Mackintosh <ivan@rcp.co.uk>
Message-ID: <31B408ED.4B2D@rcp.co.uk>
Source record: 83372

Imageman is a PC DOS utility that allows XFD/ATR images to
be created or manipulated (files added/deleted/extracted).

The new version V0.2 can be obtained from the XL-It web page:

http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html

under the link "Emulator Tools". (My web site still has
problems and will not be running properly for 2-3 more weeks)

Changes to the new version:

* A browser used for loading images;
* Enhanced density support includes creating, adding, deleting
and extracting;
* Convert existing single density disks to enhanced density
(for extra disk space).

Ivan

> likely be using on the Atari side, you could spend an entire day uploading
> the stuff (like I did).

It's probably worth it to get an 850 or a P:R: (in other words, an
interface that gives you a standard serial port on the Atari rather than a
direct-connect modem) if you are going to transfer a lot of stuff. Then
you can hook the Atari to the Mac with a null-modem cable and transfer
files with a terminal program on each at 9600 bps. Saves a lot of time.

Here's my setup: Mac serial port <--> Mac modem cable <--> null modem ($5
at Radio Shack) <--> female-to-female gender changer (homemade, but you
can buy one anywhere) <--> 25-pin to 9-pin P:R: modem cable <--> P:R:
Connection <--> 1200XL. I use ZTerm on the Mac and BobTerm on the Atari
and have no problem transferring files at 9600 bps using XModem or YModem
protocol.

Anyone who wants more details about the setup (it _is_ a bit tricky now
that I look closely at the spaghetti on my computer table), feel free to
e-mail me!

I'm aware of this, but I was talking about games that run on my real 800XL
with no translator. For some reason, they just die on Xformer in XL mode.

That sounds like San Jose Computer. I remember Marcus, the owner, when they started doing Atari stuff on Almaden Road and they were then called San Jose TV. They moved to Sunrise Center on Blossom Hill Road, then a warehouse near Monterey Highway and Alma. Anyway, swapping parts or even entire computers is a common way of fixing Atari stuff, so don't be upset or surprised in the future. To his credit, he always backed whatever he did for me. I bought a couple of his custom built 810s in wooden boxes. One of them was a little off in alignment and when I brought it back, he fixed it on the spot, no questions asked. I think it was a 90 day warrenty on his work, which is usually plenty of time to see if something isn't right.
Anyway, he's not in business anymore as far as I know, but we in San Jose are lucky to have so many others that support Atari Computers. There's B&C Computervision, American Technivision, Best Electronics, and maybe even a few others I don't know of, that support and sell products for the 8 bits.

Which modem? If it's an XM301 or SX212, then you'd need an SIO splitter that allows 2 "end-of-chains", because these modems have only one SIO port. If it's a modem connected to an 850 interface, then the 850 (with its 2 SIO ports) would be connected between your computer and the APE cable. I hope this helps.

Well, if you read the license that comes with it (in the directions)
it says presently it is freeware, not going to release source code,
etc. Since it is a license, the holder of the copyright can ban anyone
from using it (like a company has say an internal CAD program, that
they wrote. Everyone who works for the company can use it and 3 of
their outside vendors, but no one else can. Similar)
I have been in contact with him and he says he doesnt use it anyway,
he prefers real computers.

Can somebody tell me what are the DCM,ATR,BIN,XFD file formats
used for. I know XFD is used by Xformer. I have the ST Xformer.
Will I be able to "use" the other formats?? I've been out
of the 8bit loop for quite a while. I decided to dust the thing
off and get back into the picture. What is the latest release
of ST Xformer?

Sounds like the same problem I had with my 800 way back in 1982. It's
a cold solder joint- you need to go inside the case onto the MB and
reflow all the solder joints, and press on all the chips you can find,
clean the memory cards, the OS card, and the CPU card (inside the case
when you take it apart.) That's propably do it. Oh yeah, blow all the
dust out of the unit also.

3358. 8 bit archive help

Does anyone know if this setup will work:
I have an extra machine that I plan on installing Linux on.
I get unlimited internet access.
I will get an extra phone line.
I will leave the extra machine connected to the internet, with some kind of re-connection when my server logs me off. (Which they do with alarming regularity. for no reason)
Is there some software or some way for people in the net to access some kind of FTP thru this machine connected to the net?
As I have the archive for 8 bits going, by email right now, and I cannot get any server space anywhere. (At least not for free!)
As I am not looking to make a profit from this endeavor, I am also not looking to pay for space. I figure It will be about 50 MBS once its all collected. Right now I have about 15 MB, all zipped and ready to go. I have been u/l to justin's (link thru my homepage http://mars.superlink.net/scharles) but that's not as satisfying as having it sorted my way (Plus, all my stuff is tested).
Does anyone have any input on this idea, or know where I can get an account on a University server somehow? They never seem to care what's on their servers!

What the hell is PDF? I've heard of it, but I don't know what it is,
and THAT strongly suggests that I won't be able to use or print it. So
please REFRAIN from using it in your Atari-8-bit-related WWW pages, okay?

This points up an important point in the development of Atari-8-bit-sup-
porting Web pages/sites: the people who need your information the MOST,
seem likely to be those who have not progressed much beyond the good ol'
Atari 8-bit, and who therefore CAN'T handle all the latest-and-greatest
data/document formats. Look at all the effort that's gone into being
able to display GIFs, and we _still_ can't display JPEGs or unpack ZIPs;
so let's not make matters even WORSE, while we can still prevent it, okay?

>use with the 'Atari800' emulator, and I imagine that I have to stick them in a

>disk image first...

Well, Cameron, here's good news: your "problem," ISN'T. The "atari800" emulator (I assume you mean the one from David Firth) can handle .XFD disk-image files "directly." Just invoke the emulator with a command such as

atari800 blah1.xfd blah2.xfd

When you get into the emulated Atari environment, then, "blah1.xfd" will appear as D1:, and "blah2.xfd" will appear as D2:. If "blah1.xfd" is in any way bootable, it will boot as though it were a disk. That's all there is to it!

(I'm using "atari800" on OpenVMS under DECwindows with the full set of Xwindows capabilities. Write me if interested.)

DCM - Disk Communicator format. Has advantages in terms of size but
is only really used by native Atari programs.

ATR - Atari disk image format. Used by the emulators, SIO2PC and APE.
I keep all my images in this just for ease of use. Not compressed at
all though so every image takes up 92K, 133K etc, unless you zip or
gzip them.

XFD - Xformer disk image format. Identical to ATR except without the
16 byte header. I believe both dos emulators can read both formats
but don't quote me on it.

BIN - not an 'official' extension. I've seen it used in archives to
denote a binary atari file which can be Loaded from atari dos etc.
Put it on an ATR with Imageman and try to load it.

PRO - disk image format used by APE Prosystem to make images of fuzzy
sector, phantom sector etc disks. You can run these on a real atari
using APE but not on the emus.

You've got that right! The Antic and GTIA chip, PM graphics with all those priorities, DLIs, etc, etc, etc seem to be almost impossible to emulate completely, even on Pentiums. Xformer is close to getting it right, but Darek seems to have lost interest in completing what has been wonderful work, so far. Others are making great claims, but every one I've seen comes up way short of even an old 400. I hope these programmers stick with it though. What a super challenge it is.

Ask your provider about the cost of a dedicated SLIP connection.
On ours, unless you have a dedicated line, you aren't supposed to set up
your system to log in automatically when you aren't at the keyboard.

DCM is used by the 8-bit Diskcomm program. BIN files are loaded from the
Atari DOS menu. ATR is used by SIO2PC. I believe there is software to
convert between all of these formats, but I don't have an emulator. You
can find ST Xformer and PC Xformer at http://www.halcyon.com/brasoft/
under "Free Downloads". The final version of ST XFormer is 3.0.

Yes, it's called inetd and it comes with Linux :)
If you choose the network option when installing your Linux
distribution it will automatically start an ftp daemon when you boot
Linux, the directory that people have anonymous access to differs with
different distributions but you can change it all anyway. Get used to
file permissions and chmod or you might find that although it's great
how you can access all your msdos partitions from Linux, it's not so
great when anonymous ftp'ers can do it! It defaults to a reasonably
safe setup though. As far as I can tell, I don't pretend to be a
Linux guru.

Have you tried NYX? If you can get verified they seem to be very
helpful. You'll need a notarised letter or summat. I know it's a
hell of a lot harder from over the pond.

Yes, Steve has apparently provided the schematics for the self powered 14C89 which is much easier to make than the MAX232. In either case it's not the same chip as the 1489.

Sounds like your board--probably the CPU, actually--doesn't like heat.
I think American Technavision (of San Leandro) still has 'em; they can't
be more than five bucks each. The good thing about Ataris is that they
are cheap enough that it's a good way to learn about "open heart surgery"
on computers. The bad thing is that there is a finite, fixed and slowly
shrinking supply of them, so we can't sacrifice *too* many units.

Or, alternatively, stay tuned to the newsgroup. I see reputable regular
contributors selling them frequently, often in the $10-20 range, depending
on how many other cables and power supplies come with them.

I have a malfunctioning 400 I'd like to fix, just for the hell of it.
I already have a working 800 and 800Xl, but it might be fun (in a
masochistic kinda way) to play with that membrane keyboard for a while. :)

Source record: 83400

Why are people still using 8-bits?

Please....don't take it the wrong way. I am overjoyed that I found this group and I am looking forward to getting an 800xl and learning everything about it that I can, but I really need to satisfy my curiosity.

Is is just for fun? Is it like old car clubs or something? Is it a challenge? The games? Nostalgia?

It sure looks like everybody has come a long way. When I was using the 800xl there wasn't anything like the type of discussions going on here around (on the BBS's in the Chicago area that were all, or at least mostly, running BBS Express by Ledbetter,)

I guess I just want to hear that it isn't just cost that is holding people back from using a p.c.
You can get a decent 386 for under 200 complete.

please, no smart-ass responses to this post, I'm a good guy.....

> of ST Xformer?
>

BIN and COM are just atari binaries

DCM was some disk image compression program inverted on the 8bit.

ATR is a disk image for the SIO2PC cable (a device that has a DOS PC
emulate an atari disk device).

PC Xformer 3.5 is the latest version of Xformer. Runs on DOS.
ST Xformer code is now Public Domain.
Freeware 8bit emulators are available for Linux, DOS, Mac.

Linux: Atari800
DOS: XLit
MAC: Rainbow

I think all of these can use ATR files(and PC Xformer). Dont know
about XFD.

There are PC and Linux programs to translate between DCM and ATR

And Brasoft(who makes Xformer) sells Gemulator to emulate an ST on
DOS/Windows.

Hope all this helps.

Yes, there is a new design for the PRO cable which also uses a 1489 chip. Steve (the author of APE) said that the 14C89 is the CMOS version of the 1489 chip and works better because of a lower power consumption (he said it was scarce on the PC serial line). He also said the regular 1489 should work. I started building the original cable, and I've got everything except the capacitors and the ICL232 chip all wired up and ready to go, but now I may change to the new design.

3378. SIO2PC, -- a hard (re)start!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-04 00:00:00 UTC
From: moriarty@imada.ou.dk
Message-ID: <1996Jun4.110218.13841@imada.ou.dk>
Source record: 83403

Hi,

About a year ago I decided to dig my old 8bit out of the closet and
try to backup all my software on my PC harddisk.

comp.sys.atari.8bit should make that an easy job. But I've found that
the 8bit FAQ and the SIO2PC documentation is very bad. I hope that
future releases of the FAQ will describe the process of reviving
your 8bit better. What should be described better?:

1) Which SIO2PC interface?

I have found at least 4 different versions:

o The old 2 chip whit .

o The mc1489 version (74LS189).

o The ICL232/MAX232 (that's what I used).

o The APE pro-system also using ICL232, but it can't be
electrical equivalent since it's using DTR instead of RI
in the PC com-port. (Could you sort this one out, Steven??)

o Did I see a 74HCT00 interface somewhere??

2) Which Emulator, APE/sio2pc?

o Apart from a significant price difference, what facilities do
they provide?

3) What 8bit DOS are available?

I have at least 6 different DOS:

o ATARI DOS 2.0s, ATARI DOS 3.0 --- both pretty useless

o ATARI DOS 2.5, 2.5XL, MACHDOS --- Standard DOS

o MyDOS 4.53 --- Very powerful!

o BIBODOS 6.1 ---- Very powerful, came with XF551.

Then there's SpartaDOS, which I haven't got.

The FAQ just say: Go get MyDOS/SpartaDOS, but what about actually
listing the differences? diskformats, SIOcommands, Drive needed,
# of Drives....

I think that both the FAQ and SIO2PC docs (you need to figure out the version of every doc) need a cleanup. This is of course a big job, but I think better guidance would make more use their old 8bit again?

Two general questions:

1) Are there any software to let the PC act as a SIOBUS master, reading you ATARI drives?

2) My sio2pc (the software) hangs every time I enter a bad command. A reset of the PC is necessary (Ctrl-Alt-DEL not enough). Apart from that it works fine. Booting from the PC. My setup is:

130XE,XF551, SIO2PC w/ MAX232 (1 chip)
Victor PC, 80286, DOS 3.03 (I know it's old)
sio2pc v3.19, starting command 'sio2pc 1'

To Nick: I can't find your bug-report requirements but I hope this is enough.

What you are asking was actually responded to about a week ago. It went something like
this...
Because they are FUN to use...

They're fun to play games on...
mold into something else...
add stuff too...
program (in whatever language tickles your fancy)...
communicate with...
talk about...
listen too...
draw with...
view pictures with...

PC's aren't nearly as much fun.

They're difficult to make work...
keep working properly...

add things to (even the new fancy pentiums with
plug and play)...
They have programs that are too big...
that blasted 640K base memory (DOS and Win3.x)...
too much weight...

You decide which is better. Heh...

Hmmmm... the binary load thing works fine for me, but for some reason I can't
copy the file onto another disk!

i.e. I'm in Atari DOS 2.5. When I select "L" (binary load) and specify
"H0:ARCHON.BIN", it loads fine. But when I select "C" (copy file) and
specify "H0:ARCHON.BIN,D2:AUTORUN.SYS", it says Error 170 (file not found).
How can this be?

Has anyone else run into this?

thanks,
Eric

I'm not sure - quite possibly. You'd have to check with Computer Software Services here in Rochester, NY - the number/address has been posted a few times recently.

I highly recommend it - I can't imagine using an Atari 8bit without it.

XFD and ATR are both disk image formats used by the emulators.

DCM is a diskcomm file, which is a compressed disk image. BIN is just
a generic binary file. On the Atari there is no difference between
.EXE, .BIN, .COM, etc. The extender means nothing to the OS. You
could even name an executable .TXT and still execute it.

For me, it is a delayed fulfillment. 14 years ago, the cost of an Atari 800
was prohibitively high(near $1000). But recently I got one finally,...
for $15. The performance is relatively a joke these days but I enjoy
BASIC programming with it. Actually, I have a special feeling for any computer
which gives 'BASIC prompt' right at power-on without any whine(disk, fan).
Since I studied EE, I know how a computer operates, but it still makes me
wonder when I watch a simple BASIC program sum 1^2 to 100^2 in seconds.
Strangely, I don't get such a feeling when I work with a PC or a Mac.

Hey, that's pretty funny. Considering I'm using my $5000+ desktop as a slave array of devices for a computer that sells for $20 these days, or that I have one of my notebooks hooked up solely to make .PRO images!

But seriously, the Atari 8-bit's have been more of a way of life for the people that 'grew up' with them. I can't imagine not having my trusty old XL around, and I don't know if I'll ever see another computer that was as neat as my first Atari 400.

>I already have a working 800 and 800Xl, but it might be fun (in a
>masochistic kinda way) to play with that membrane keyboard for a while. :)

That's one reason I'm so excited about picking up my new CPU chip... I can actually install it myself. I'd never try this on my Powerbook! hehe.. Actually I have an Atari 65XE which is in working order, so my Atari 800 is just icing on the cake. I also have two working Indus drives, two 850 modules, a 300 baud acoustic modem (not using it to surf the web, thanks!)... and I have a boxful of spare power supplies, cables and sundry manuals and such.

Dunno why I'm telling you all this, but I'm just excited to discover that the 8-bit Ataris still have a following!

:) Ken

3390. 1050 drive gone south

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-05 00:00:00 UTC
From: cdyson@sog.com
Message-ID: <31b50636.2741859@news.redshift.com>
Source record: 83317

Just fired up my 1050 drive after 8 years and its not working.
When power is applied the drive homes then spins for a short
time as usual but then starts spinning again every 10 or so seconds.
Doesn't respond to any commands from the 800. Anybody have
any idea what might be wrong with it? Worked fine the last time
I used it.

Speaking of the 1010! I got mine back in '83, and I HATED the flimsy construction of those damn plastic buttons! They had thin stems inside that pressed against metal tabs to operate the mechanism. These stems were always breaking off! I can't remember HOW many times I tried to super glue, splint and otherwise try to reinforce those damn things!

It seems like it wasn't the world's most robust thing, either. I got a 410 years later that actually works much better!

I still have the 1010, though. Looks nice, but that's VERY deceptive!

In the US, the XF551 came with either DOS 2.5 or DOS XE. The DOS 2.5
manual didn't mention that the drive was capable of DSDD!

> Then there's SpartaDOS, which I haven't got.
>

Either Mydos or Spartados will work with almost any disk drive, up to 8
drives or hard disk partitions, and ramdisk. There are doc files for
Mydos, giving technical information about the disk formats and commands.
You can even get source code for it. On the other hand, Mydos does not
have built-in support for high-speed floppy drives like the US Doubler or
Happy. Spartados is shareware. You can get a manual from Fine Tooned
Engineering, but I don't think you can get source code.

Check ftp://ftp.valleynet.com/pub/users/j/justin/atari8. It's on one of
the games*.zip disk images, I think somewhere between games10.zip and
games15.zip (not sure off-hand).

Howdy

Can anybody extrapolate on Rainbow? That is, where can I find it, how good is it, how well will it run on a slower Mac II, etc? (I'm not too optimistic--my computer had a bunch of trouble running Activision's Atari 2600 Action Pack :/)

Thanks

Ok, the books have all been parted out. And though I have received
several offers on the hardware, none of them have panned out so im
offering this stuff again...

Time to clean out the basement. All of this 'stuff' has to go, you can
make me an offer on the whole lot or part of it. I will be inclined to
give a much better deal to the person who offers to take it all...

the stuff:

800xl without power supply (works fine, tested with my XE power supply)
1050 disk drive (unmodified) with powersupply/SIO cable works fine
1050 disk drive (not working/fixable?)
Joystick-connect 300 baud modem with manual
SIO-Parallel port (RS-232) cable
Joystick-Parallel port cable

Books: gone already

Make me your best offer plus shipping. This hardware weighs about 25# so
please don't make me a 'shipping included' offer.

You're supposed to destroy the saucer base (which I expect you did). But then, as you say, nothing happens - just an empty landscape as far as I recall (though it has been at least 6/7 years since I played it properly). I think I used to save each time shortly before the first saucer appeared on every level. That way I wouldn't have to tackle the nasty ones with the red (?) coloured lasers (took me ages to get the best shield I could find to absorb one blast of that). Did anyone discover whether it has a more interesting ending?

Hi;
I'm kind of new to the internet thing, and am not quite sure how to get info around efficiently, but I found your name connected with 8-bit Ataris and wondered if you could pass this along to the embers of the Atari 8-bit community:
I am a (regretfully) lapsed Atari 8-bitter who collected a fair amount of equipment and software over the last couple of years. While I hope that I'll have some spare time some day to putz with this stuff again, one thing I seriously doubt that I will have any future need for is my Multiplexer from CSS (Bob Puff's group). If anyone out there would like to have this, please get back to me with a reasonable offer via my E-mail address. It's a shame to let this neat little gadget go to waste if there is someone out there who would enjoy using it.
jmsliker@execpc.com

I can definately say the the one chip (max232) version of the SIO2PC cable will work with APE. I one of these mounted inside my 800xl and it has been working fine with APE.

As for the 2 chip version, I'm not sure (can't remember if I tried my two chip version) but I thought there was a configuration option to select 1 or 2 chip version.

This game was originally called something else, was it? A title
published by Electronic Arts. The only name I can recall is
"Quest for Quintana Roo", but Quintana Roo was a completely different
game.

"Zombies" had a snappy tune.

No, there are 2 different types of cable - and they can both be made
using several different designs, but the same chips! Are you confused
yet?

SIO2PC, can be made with the old 2 chip design, the MAX232 or the 1489
(both work under 1 chip setting). This cable is used with SIO2PC _or_
APE to connect your Atari and disk drives to your PC. The PC emulates
additional disk drives using images, lets you print to lpt1: and with
APE you can use your PC modem.

APE Prosystem cable, can be made with MAX232 or 1489, this cable is
only used to connect a 1050 to your PC, to make exact copies of copy
protected diskettes which you then run on your Atari using the SIO2PC
cable.

I don't exactly know why two different cables are necessary but as
they seem to use different flow control techniques it might be
something to do with matching the speed exactly on the 1050. I'm sure
the inventors had good reasons!

3409. Uploaded: Atari800-0.4.2.tar.gz

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-05 00:00:00 UTC
From: David Firth <david@signus.demon.co.uk>
Message-ID: <1996Jun5.210854.289@signus.demon.co.uk>
Source record: 83336
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

```
The latest version of this emulator can be downloaded from:-

ftp://ftp.demon.co.uk/pub/emulators/atari/Atari800-0.4.2.tar.gz

It is distributed in source code format and should compile on all
UNIX systems using X Window. The emulator has also been run at
various times on non unix systems including: CBM Amiga (very slowly),
and VAX/VMS systems.

Changes in 0.4.2
----------------

- Test code for faster screen generation, enabled by defining DIRECT_VIDEO
within "atari_custom.c". It needs a little more thought with respect to
collision detection, hence it is disabled by default.
- Better PMG Priority Handling.
- Tidied up code accessing hardware registers
- Changed handling of B, D and I flags.
- Changed handling of NMIs.

Changes in 0.4.1
----------------

- Flashes background colour while performing direct Serial I/O
- Minor optimisation to Player/Player collision detection
- Minor changes in CPU emulation
- Correction to new cartridge code causing it to fail under XL/XE
emulation (Thanks to Neil Shipp)
- New targets in the Makefile for freebsd systems (Thanks to Ivo
van Poorten)

Major Features
--------------

+ 48K/52K Atari 400/800 emulation (optional RAM between 0xc000 and 0xcfff)
+ Atari 800XL emulation.
+ Atari 130XE emulation (but Antic access the same bank the CPU is using)
+ OSS Super Cartridges.
+ Wide / Normal / Standard Playfields.
+ Display List Interrupts.
+ Vertical Blank Interrupts.
+ All Antic Display modes.
+ GTIA graphics support for *all* Antic modes (GTIA Characters etc.)
+ Player Missile Graphics with priorities and collision detection.
+ Reads both ATR and XFD disk files.
+ Disk swapping for XVIEW, MOTIF and Amiga versions.
```

+ PIL modes - allows memory between 0x8000 and 0xbfff to be toggled
between RAM and ROM.
+ Horizontal and Vertical Fine Scrolling
+ Sound Support on Unix using the Network Audio System
+ Printer support

3414. 2-player option in Xformer?

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-05 00:00:00 UTC
From: Thomas Main <tmain@appstate.campus.mci>
Message-ID: <31B644D0.6C88@appstate.campus.mci>
Source record: 83341

Hello:

Is there a way to play two-player games using PC Xformer?

I'm trying out the demo version 3.3 and have only had sucess with the cursor keys for player 1.

Also, does anyone who has the commercial version want to talk about how good the joystick support included in it is? I'd like to know. How about sound?

I'm also looking at XL-it!, but it seems to crash my computer a lot and runs terribly slow on my 486DX2/66 with Win95. What have your experiences been? Does it support joysticks? 2-players?

Thanks.

> with no translator. For some reason, they just die on Xformer in XL mode.

Perhaps even in emulatiom, some games need the translator disk. XL-it
which is only XL would need it, but Xformer has 800 mode so it's a moot
point there. Fix XL can be made into a disk image since it doesn't use
the boot sector like the Translator does.

the reason your probably being knocked of is because theres no activity between your machine and the ISP one
way to fix this is to get software that allows you to ping every so often. i've seen this for windows95 & NT
I'm sure there has to be one for linux. secondly if you are planning to go 28.8 people will fall asleep trying
to transfer files, if more the 5 users are on at a time I recomend you get ISDN a bit more expensive but worth
it. As for FTP Server theres a ton of shareware ones.(try www.shareware.com) if i were you just forget linux
get NT server 3.51 or beta 4.0 it comes with everything you need to set up an FTP and 10 times less
complicated to maintain.

Luis....:)

3417. Alternate Reality problem

Newsgroup: comp.sys.atari.8bit

From: jvogel@crl.com
Message-ID: <4p5q94$oba@crl10.crl.com>
Source record: 83344

Years ago, I bought Alternate Reality: The City for my 400, but had to take it back because it didn't work after the character selection screen. (when the adventure was actually supposed to begin). Why it didn't, I don't know. Today I downloaded The City .ATR images and tried them on my 800 (via APE). I got exactly the same problem!

Was this a game written especially for the XL series? Or did it require more than 48K?

It was originally called Zombies, by some small outfit.

Electronic Arts, in their big licensing sweep, bought it up, cleaned it
up a little, added some levels, and re-released it as The Realm of
Impossibility.

Awesome game.

I think the safest bet would be to run the PRO system under dos itself, not a shell. The timing has to be very correct for it to be able to collect the needed info. As far as running APE under '95, it does perform well. Some 8-bit things are more sensitive to disruption than others however. Still the fault lays with '95's time slicing, which occurs and causes hiccups in most time critical software.

I own the registered version, and have never been able to get the joystick to work. The 'sound' support is a joke. Most of the good 8-bit games do not work properly on Xformer.

>I'm also looking at XL-it!, but it seems to crash my computer a lot and runs
> terribly slow on my 486DX2/66 with Win95. What have your experiences been?

The one saving grace of Xformer is that it is the fastest of the emulators, however you still may need more than a 66. As far as I'm concerned the Xformer still is an utter piece of rubbish, which fails to live up to almost every advertised function.

Message-ID: <4p6ofr$6ir@news.tcd.net>
Source record: 83268

It could be a couple things, first of all try opening the top if your modle has the flip out locks where you lift the lid to the cart port, if not then unscrew the two screws holding the door cover on, and you will see 4 banks of ram cards..

Pull the forward bank out and then pull the last bank out put the last bank in the slot where you pulled the first bank...boot it up, and see if you still have the problem, if so then move the second bank to the last bank..if the problem goes away with either then you have a ban 64k ram on the card you put in the last slot...the rams generaly are socketed and you can replace all of them inexpensively..

If it still has the problem after this, then go for the CPU..??

Or I have a working tested modle will send you for $15.00 shipped guranteed to work..?

The Ram cards will say RAM on the edge...

Bob

:) Yeah I just read his message, I didn't realise they had this attitude.
I know people have different attitudes about this but personally I
think that it's a little anal to worry about copyright issues on games
which are no longer commercially available. To me it's like the issue
of a landlord who keeps perfectly good properties empty while there
are homeless people on the street outside. Well, maybe that
comparison is somewhat drastic. I used to work in an electrical
appliance shop, and if we took in something for a part exchange
promotion e.g. an old vacuum or whatnot, we had to break it up with a
lump hammer before we put it in the bins. What's the relevance? I
don't know. But it's still annoying me.

I'm not sure about the memory requirements, but one thing to bear in
mind is that when you start the game, it writes some data out to disk
2 side 1 so when using real floppies you couldn't write protect the
second disk. You could also only use a character with the disk 2 that
you created it with, i.e. if you used your original disk, you had to
keep using it for that character. If you write protected the disk, it
would just stall at the point after you have 'joined' which sounds
something like what you're getting.

Why? I just can't see the reasons for this. Hosting an ftp site with
old out of date software seems a lot less naughty than running a news
server carrying alt.binaries.warez.* to me.

Nope, me neither. It'd be a pain to have to restart in MSDOS mode
every time.

I'd figure the timing would be more critical using
>the PRO cable, true?

Yeah I would think so, the 1050 will only put out (!) at a set rate,
so in order to replicate those fuzzy sectors etc, I suppose the PC
would have to be listening to it continually.

.... A GREAT BIG "AMEN" to that! ....

Hi Chris,

Boy, can I empathize with you! Not only is PC Xformer CRAP, but its author,
Darek Mihoka, is mentally unstable (put kindly). I recently sent him an email
to ask for the 3.5 upgrade, as I'm a registered owner of 3.2. After not hearing
from him for 2 days (as in so many times in the past), I sent him ANOTHER msg,
saying that my next msg. would go to c.s.a.8. This got an immediate response!
He came back at me with a foul "nasty-gram", even though I was never impolite in
either of my msgs. to him. He even demanded an apology. Well, I COULD have gone
right off, but in the interest of peace and harmony, and not wanting to stoop to
his foul level, I DID offer an apology, then asked that we "bury the hatchet" and
would he just e-mail me the upgrade. His response??? He came back at me with
another "verbal bashing", calling me a "goddammed cheap bastard" for building my
own PC Xformer cable from plans which HE provided to all his customers in a mass
mailing! He then removed my name from his customer list, and deleted my access from
the registered download site! Can you imagine that?

I really feel sorry for anyone else that has had to put up with the unstable and paranoid
antics of Mr. Mihoka. Fortunately, he's the only software dealer on the internet that
I've had such dreadful problems with.

Best of luck to you ...

Bill
(ps .. I'm going to CC: this to the newsgroup, as I think that anyone even THINKING about buying PC Xformer should know what they are getting themselves into, BEFORE they buy it!)

Source record: 83279

I picked up a bunch of Atari stuff, got what I wanted, and am either
going to give it away, or throw it away.....

I prefer if the person who wants this stuff comes and picks it up,
however, if you pay for shipping it's yours. I should warn you there is
about 20-30 pounds, and about six boxes of stuff....

here is the rough list (don't e-mail me for a complete list, I don't
have time to sort through everything....):

(1) Atari 400
(1) Atari 410 tape drive
(1) 16K Ram upgrade
(2) Atari 800's
(2) Atari 850 interfaces
(2) Atari modems (the old kind where you put the reciever on the modem
(1) Koala pad (have box too)
(1) Small monochrome monitor (about 9 inches?)
(3) boxes of books, software, and other misc. stuff.....

Again, I prefer if you pick up, but shipping is available (at a
cost to you, prior to shipping)> I'll take the first offer in
Northern California, and then consider shipping after.

If not claimed by Monday, June 10, it goes to Mr. Dumpster......
Sorry, not a lot of room in my office........

Brian

Probably not, since Atari doesn't use PC standards. It's an RCA-type
monitor if it uses the DIN plug in the back of the console.

|> (mpp made a lot of modems that connected to the joystick ports) and
|> emailed the stuff to himself. (YUCKY SLOW!)

Ok, so I'm following up my own thread. I managed to come up with an
alternative method to transfer files from the 8bit to the Mac:

Requires ST Xformer and Xformer cable.

(1) connect 1050 to the Atari ST via the Xformer cable
(2) format a 720 DOS floopy on the Mac (PC Exchange enabled)
(3) insert the Mac formatted 720 DOS floppy into ST Drive
(4) copy the 1050 disk to an XFD image using the Xformer software
(5) copy the XFD image to the Mac 720 DOS floppy

I guess it could be made even easier by connecting the ST and Mac
together across some kind of serial link. The real trick here was
formatting the DOS floppy on the Mac, the MAC can't deal with ST
formatted floppies, but the ST had no problems with the Mac formatted
disk.

About the XFOrmer 3.5 ....
I have used it for over a month. Certainly it is not like the real thing. But it does support my joystick (Gravis Game Pad). I have plugged it into a joystick port on my soundcard or into a joystick port on my serial port card. Both work OK.
BUT, joysticks and the PC do not really go well together. Especially in DOS. In Windows, there is a joystick calibration module in the Control Panel. That helps keep things working OK. But you need to do that in each session, for best results. There is no calibration module for DOS programs??? (any ideas???)
I think that Darek is not making a whole lot of $$$ from the XFormer. I am guessing that he really is directing his business venture towards the Atari ST crowd. I do not own any ST's. I have 4 Atari 8-bits.
I consider the XFormer as kind of a convenient half-way device to look at your images and to run most BASIC software programs. I still enjoy using XFormer with SpartaDOS 3.3A. (If any one wants a copy, then you can e-mail me at DougF@gnn.com). I kinda doubt that Darek will continue to develop the XFormer. There is not that much $$$ in it for him. Remember that he is running a business. The XF3.3 (free) is almost as good as XF3.5 ($40).
Lately, I have changed my thinking that the best way to use Atari software is not with a PC emulation of the Atari CPU. BUT, the APE software and cable will allow you to bypass the Atari disk drive and get 100X better storage capacity and convenience, using your real Atari. You can copy over your real disks and just keep them for archive purposes.
It is amazing to me that there are still many grown-up (?) adults who are spending valuable (?) time with their Ataris. I continue to think of my Atari as "The Little Computer That Could".

Happy Computing to all, from Doug Feldman

This isn't a translator issue!! I'm talking about games that run on my
800XL, they run on XL-it, but they just die in XL mode on PC-Xformer.
(They run in 800 mode)

I think this is the reason why people think that Xformer has horrible
compatibility. Xformer defaults to XL mode, and I wonder how many
people switch to 800 mode and retry.

Neither. It's a composite video monitor which can be used with a VCR or
video game. I don't think VGA or SVGA even existed before the Atari
8-bits went out of production.

(Eric C. asks WHY?)
WHY?, Eric? BECAUSE the A8s are neat. I can barely figure the busses, PCI, IDE, SIMMs, connections, etc. on my new 120 mh DX486 thingy I got. I must admit that I am a bit phoney in that I don't have an A8 set up. But I have a BUNCH of Atari stuff, I just got a sc1224 monitor from Don's Deals for $18 + $20 ship. Now where can you find a deal like that. I also got 'Atari Plantetarium' and 'Star Raiders' for my STs in this sale, and 10 Atari patches for $2.50. Where else can you get that kind of stuff?
Back to the guilty feeling about not having a A8 set up, for many months. My daughter got a divorce, there are 7 people, 7 cats and 6 dogs living in my house. My father-in-law passed away and now I'm piled up with stuff from his estate. We're crowded here. Oh, yes, guilt. The thing is, I WANT to set up my A8 and also check out my new ST stuff. I just don't have work bench space. Sure, I do word processing, communications, midi, etc. etc. on my new 486. But this 486 is like something I couldn't buy (I didn't, it was given to me.) I can buy A8s, take 'em apart, stick a 30 year old oscilloscope on it and look at wave forms and wonder how the thing works and come closer to understanding than I EVER will with the latest Pentium or Quadra Macintosh.
I'm not a 'power user'. A 'power user' is a sucker that buys new software and hardware every six months and wants to the computer to answer the fone, take a msg. send a fax, scan in Playboy', play a game that takes forty weeks to complete, and stuff like that. I want to understand how IT WORKS. I come closer with the A8 than I ever will with a new, expensive computer I can't afford to bust anything on.
I hope this lets you know some of the passion I have for Atari, particularly A8.
In my position, I've had no greater satisfaction (computer wise) than talking to Itay Chamiel over the internet for a couple weeks and actually figuring out how to make XMODEM crc16 work.
I'm sure others have other reasons, but theres mine.

3454. IMAGEMAN help needed

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-06 00:00:00 UTC
From: "A.P. Hilliard" <pash@en.com>
Message-ID: <31B761D3.28AC@en.com>
Source record: 83292

I'm trying to use IMAGEMAN.EXE to put together disk images to use with either Xformer or that Atari.exe emulator, but none of the disk images I create with IMAGEMAN work! Both emulators give me a 'BOOT DISK ERROR' or something along those lines when I load a disk image I've made with Imageman.

Am I forgetting to include something in the images like DOS.SYS, and if so, how the heck would I put that on the disk image?

I've even tried editing disk images (both .XFD and .ATR) that work with the emulator, but as soon as I edit them (remove something or add something new) they won't work.

My copy of Imageman didn't come with a readme file (I don't think), so could someone clue me in?

The trouble I'm going through just to check out Qbert on the 8-bit! :)

Actually, Zombies was from Bram, Electronic Arts liked it so much they
commisioned the author to write a sequel, of sorts; Realm of
Impossibility. It includes all the original Zombies mazes (With locks
on half of them!) And 6 more!
Gee Whiz!

3456. Re: APE PRO cable

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-06 00:00:00 UTC
From: scharles@superlink.net
Message-ID: <31b625d9.4602340@news.superlink.net>
Source record: 83347

Ultimately, what I see happening is that the Emulators will get up to
the level of the c-64 one, and 8 bits will disappear (I hope not)
along with the PRO system, unless it is incorporated into one of the
emulators. (Not likely at this juncture, I understand).
Besides, it's still fun to remove the copy protection.

Like being able to crack software protection on it. Can't do NOTHING
on the PC.
Plus, All the problems I've had with the last 3 pc's I've had make me
want to pound the @$@#%^~!@ing things through the #%@#(!%)(! Wall!
Nothing beats the simplicity of the old atari's and the simplicity of
adding most of the upgrades to them that are available.....No IRQ's,
and such to worry about. More truly PLUG AND PLAY than any pc.

I am concerned that people are actually comparing 8-bits to pentiums..

There is no comparison. I can understand the nostalgia, I want to be nostalgic,
it just that a p.c. is much more capable than an atari 8-bit. Why are people trying
to prove otherwise? Especially in the business enviroment. Is there even a spreadsheet
I could run on the 800xl?

I can't wait to see alt.comp.sys.pentium.

Example posting:

Does anybody know how to start Netscape from Windows ?95? ?
I click on the icon once, but nothing happens. I think that if I can get
it to run, I could browse some newsgroups at turtle speed (28.8)

Do I need more than the 32megz of RAM this dinosaur came with?

Anyway..

The 800xl will always have a special place in my heart, but lets not compare two.

Anybody have one for sale? (with a drive please)

But we know this version of DOS does allow access to H0: because I can
binary load off of it. It's the same version of DOS that can't find
the same file when I use the Copy command in place of the Binary load command.

CSS is still in business? Didnt they make the 1050 duplicator and the
impossible?

3463. Need to find an architecture/functional spec for atari 8bit chips

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-06 00:00:00 UTC
From: cy <cyrus.malek@amd.com>
Message-ID: <DsK740.1ul@txnews.amd.com>
Source record: 83354

Where can I find an architectural or functional spec of the primary chips in an atari? I've got "Programming the 6502", and this book provides a good overview of the 6502, instructions, etc...

I don't think I have the information on the GTIA/POKEY/ANTIC/whatever chips there may be - and this is the info I need. I want to put together a behavioral model of an 8bit system that I can use to test add-on devices (via simulation).

Any help out there?

Also, I have asked this before, but what has happened to the info-atari digest/archive...I haven't seen much activity as of late in the archive.

Cyrus

Get a 1N32A or 1N914. You can get them at Radio Shack. I have used
the 1N914 but either should work. Should be able to use a 1N4148 to.

>The Mims book doesn't tell much about the actual construction of circuits
>so I'm looking for any tips anyone can share, and perhaps some of you
>would also be interested in doing it yourself. Let's talk!!! :)

Takes less than an hour to build it. You might find some help at your
local high school if they have an electronics program or from a local
amature radio club but its preaty much the same as how its layed out.
The only thing about the ProSystem interface is you need an external
5 volt supply to run it. Other than that, good luck..

>Off to practice some soldering...

It's really fun. Wish I could see better. Kind of do it by touch now
days.

Later.

The PC3 was an IBM clone put out for a very short period by Atari,
around the ST era. It was about the time that Atari started it's long
trek into the wilderness.....
Not sure if they marketed it in the US, I only ever saw it at Silica
Shop over here, one of the biggest ST dealers of the day.

Having met Darek in person a few times and also having talked with him via phone a few more I have not found either of your statements to be correct. First lets talk about PC Xformer 3.5 (I got my upgrade for 5.00) with no problem via Toad Computers. It works great. I have used a great deal of my Atari 8bit programs on it with lots of success. I can't even tell you the number of games I can run with it and lots of apps and utilitys as well. Alot of the problem I see people having I have not been able to duplicate here. While still other problems I find are caused by people not fooling around enough. Many programs did not work when I loaded them, however 90% of them worked by selecting different options such as 800, XL or 130xe modes along with basic off and turbo on/off.... Somethings don't work but I can say I have hopes they will and the way to make this possible is NOT by bad mouthing Derek or his software! If you don't care for Derek don't deal with him but go thru someone like Toad Computers their great people!

2nd Derek's personality: I don't care what Derek's personality is like personally. Though I have never had a hard time in my dealings with him, his improtance to me is not his view of life or what he does on his day off. It is supporting a program that I paid for and so far I keep getting updates and more things are working better!

I will say one thing, when every Atari finatic in the world was raving about those bastard Tramiels He was one of the few to step up and tell the truth about them. He has never tried to win a populaity contest and as far as I can see has remained loyal to the Atari userbase alot longer than Atari Corp themselves did! Remember they are the ones that shelved the 8bit system and introduced the ST platform and never supported it EITHER.

If you want get back to me via netmail at terryr@newreach.net and I will be more than happy to help ya with any of your PC Xformer problems I can.

Terry

What's wrong with it? Any ideas? The electronics? The drive mechanism?

Does anyone know of American Technavision still sells the 1050 drive
mechanism? Last I checked about a year ago, they had a bunch of 'em
for $14.95 each or 2 for $24.95.

If the problem is the drive mechanism, you may want to give 'em a call.
(I don't have the number handy but it was recently posted.) Even if
you can get a 1050 used somewhere else for almost the same price (actually,
1050s sell for more than the computers--usually 800 or 800XL--do), when
an item is "obsolete" and no longer being made, the importance of having
spare parts becomes greater and greater.

If the drive mechanism seems fine, heck, buy a 1050. Or two. For the
right price, I wouldn't mind buying 10 or 20 just to feel secure in
having enough backups for the rest of my life. (I only have 4 now, plus
two 1050 drive mechanisms acquired as described above.)

B&C is a great resource for the "can't get it anywhere else and/or
gotta have it *now*" items (which occasionally we *all* come across),
but I think B&C wants something like $50-60 for an 800XL. When I
first rediscovered the Atari in late '94, I found one at Goodwill in
virtually brand new condition for $6.99. People sell 'em here on
the newsgroup in the $20-30 range.

But living and working so close to Santa Clara, it's nice to have
such a resource close by when I really want it *now* or can't find
it cheaper anywhere else.

Take M.U.L.E. for instance. Last time I checked, they were selling
M.U.L.E. for $29.99 when most other games they had were selling for
$9.99-14.99. (Hell, I even broke down, cracked open the wallet and
forked over $33 with tax to buy a copy.) Why? Try finding it anywhere
else. Try getting someone to sell you a copy. That is the value of
B&C. Usually, they charge more than you can find on the net or in
private dealings (hey, they *do* have to pay for a storefront and put
food on the table and I can appreciate that), and few knowledgable
net-savvy Atarians will look there first, but as a last line of defense
they're a great resource for the "community."

I haven't gone there in at least six months. I'll have to make it
out there again soon. It's not like I work more than five miles
away from their store...

Here's an even easier way- If you send me the disks, I will transfer
them for you and add whatever software is on them to the atari
archive. (If you like) the format on the pc is the same as the format
on Rainbow.

Has anyone else tried these under Xl-it? I got Realm of Impossibility to
run, but only ran across 1 zombie, and
sometimes the screen would scroll to another area many screens away from
my character's present location,
either leaving him in limbo, or stranded in space. I don't know how to
run Zombies. Can anyone
tell me how to run .bin or .com files in Xl-it?

thanks,
-Scott

Definitely the way to go. I use a lot of emulation software, MSX,
Coleco, NES, GameBoy, and it's great. But when it comes to the Atari
stuff, 99.9% perfection isn't good enough. And I think we're pretty
spoiled now, just think back 10 years, if you could buy an SIO
subsystem which had 8 drives, a printer interface and a modem, how
much would you pay for it??

> It is amazing to me that there are still many grown-up (?) adults who

Well, personally I think modern PC games are too complex for their own
good. There's nothing like firing up Defender on the 8 bit for a good
blast. There's a saying, "Keep It Simple, Stupid!".

Cross-posted to: comp.sys.ibm.pc.games.marketplace,comp.sys.cbm,comp.sys.ti,comp.sys.apple2,comp.sys.apple2.marketplace,comp.sys.amiga.software,comp.sys.atari.8bit,comp.sys.mac.games.marketplace,misc.forsale.computers.pc-specific.software,misc.forsale.computers.other.software,misc.forsale.computers.mac-specific.software

I am posting this message for a friend without his own Internet account.

ALL SOFTWARE PACKAGES ARE ORIGINALS WITH COMPLETE DOCS, DISKS, AND
BOXES, unless noted with a * which means there is no box. All opened disks
have been tested and I will guarantee they work.

Rather than post separate for sale messages for each computer as I have done
in the past, I thought I'd combine them into one large list so people could
see everything I have available. If you are interested in anything, please
read the end of the message before replying.

Items listed in this order:
Part 1. Commodore 64/128 game software (many: $2.50-$4 each), datasette
Part 2. Amiga 3.5" game software (4 games @ $4-$5 each)
Part 3. IBM old business software (several @ $3-$5 each)
Part 4. Apple II PFS disks, GS/Mac ADB-style MIDI interface
Part 5. Atari ST and 8-bit software (several non-games @ $2-$3 each)
Part 6. TI-99/4A cartridges (2 educational @ $3 each)
Part 7. DBase II/III computer books (several)

Feel free to make reasonable offers on anything below. Few prices are firm,
especially if you are buying several other items.

=== Part 1. Commodore 64/128 (all 5.25" disks) ================================

$2.50 each

Deceptor
Force 7
GEOS Desk Pack I *
Sky Runner

3 for $10

Blue Angels
Die Hard
Oil Barons (big and heavy package)
Paperclip 64 *
Paperclip Spell Pack *
PHM Pegasus
Print Power (+Atari)
Top 20 Solid Gold (Cosmi) *
Top Fuel Eliminator

TV Sports Football
X-15 Alpha Mission

$4 each

Ace of Aces
Beyond Dark Castle *
Beyond Zork 128 *
Border Zone *
Defender of the Crown
Grave Yardage *
Kings of the Beach *
Millionaire *
Monopoly (Leisure Genius)
Murder by the Dozen *
Nord and Bert *
Pipe Dream *
Tomahawk

Hardware:
Commodore 64/PET Datasette.....$7

=== Part 2. Amiga 3.5" disks ==

Jack Nicklaus' Golf, no box....$4
Midwinter.....$4 without box, $5 with box
Pioneer Plague, no box.....$5
Warlock.....$4 without box, $5 with box

=== Part 3. IBM (mostly 5.25" disks) ==

The following business programs are complete with original manuals and disks.

Chartmaster 6.21 by Ashton-Tate [*] $4
Comms (1987) by Zortech $3
Diskette Manager III 1.0 by Lassen Software [*] $3
Double DOS (1986) by Softlogic Solutions $4
Dr. DOS 6.0 by Digital Research [*] $4
Form Filler 1.5 by Block Publishing $5
Inside Track II by I-Track Corp $5
Lotus Freelance Plus 2.0 by Lotus $5
(can't tell if it's a demo - a sticker was neatly removed from each disk)
Lotus Graphwriter 1.0 by Lotus [*] $4
Lotus Metro 1.0 by Lotus [*] $4
PC Focus 3.0 by Information Builders $5
Primetime Personal (Time Manager) 1.23 by Prime Time [*] .$3
Prodex Phone Management System 1.4 by Prodex [*] $3
Q&A Write 1.02 by Symantec [*] $4
Secretary Bird (1988) by Software Toolworks $5

Note: [*] indicates that the package and/or disks have a sticker which say
something to the effect of "Evaluation Copy" or "Demo version - not for
resale". I think most, if not all, of these are still full working

versions which were meant for stores to demo to customers. Feel free
to make reasonable offers on the whole lot.

=== Part 4. Apple II+/e (all 5.25" disks) ==================================

Hardware: Apple-brand MIDI interface with cables (plugs into ADB port) - $16

ORIGINAL DISKS ONLY for 15 different PFS:File, PFS:Graph, PFS:Write, etc -
50 cents ea. disk - can provide a complete list if interested

=== Part 5. Atari ==

Atari ST 3.5" software - $2 each ** untested - I don't have an Atari ST but
I would refund your money on any unlikely bad items **
E-Z Track MIDI Sequencer - new, unopened (3 of them)
Personal Pascal *
ST Key *
Zork I disk (original disk only) - $1

Atari 8-bit 5.25" software - $3 each
Atariwriter (cartridge) *
Home Filing Manager (disk) *
Pilot language (cartridge) *
Print Power (Atari/C64 disks)
Print Shop (disk) *
Telelink (cartridge) *
Turtle Tracks (disk)

Also looking for Clowns & Balloons game disk for Atari 8-bit -- will trade

=> Take ALL 6 Atari ST and 7 Atari 8-bit items above for $24 + shipping

=== Part 6. TI-99/4A ===

Working cartridges - no boxes

$3 each

Beginning Grammar, no docs
Household Budget Management, w/ docs

Cartridges WANTED (will also trade the above for or possibly buy):
Beyond Parsec, Bigfoot, Choplifter, Computer War, Crossfire, Joust,
Jumpman Jr., Munchman 2, Scrabble, Space Journey, Spy's Demise, and Tris.

=== Part 7. Books ==

I have too many DBase books and would like to sell most of the following.
If any of them interest you, please make an offer on each in the $3-$6
range.

Advanced DBase III Plus Programming and Techniques by Miram Liskin
Advanced Programmer's Guide to DBase II and III by Luis Castro
Advanced Techniques in DBase II by Alan Simpsons
Advanced Techniques in DBase III by Alan Simpson

Command Performance DBase II by Douglas Hergert
DBase III Plus & Local Area Networks by William Bates
DBase III Plus Programmer's Library by Joseph-David Carrabis
DBase III Plus To Go by Peter Randall
Everyman's Database Primer Featuring DBase II by Robert Byers
Expert DBase III Plus by Judd Robbins
Programming with DBase II by Cary Prague
Understanding DBase III Plus by Alan Simpson
Using DBase II by Carl Townsend

==========

The above prices do not include shipping. I'm in California. Depending on how far away you are, how many items you want, if they have boxes, and how heavy everything is, the shipping cost usually ranges from $4 to $8 UPS or priority US mail. I don't have time to deal with lots of small transactions, so I need to ask a minimum of $15 worth of items. If you buy a lot of stuff at once, I will make you a deal on the shipping. In general, a few pieces of software cost $4 or $5 to ship.

I will only ship within the continental UNITED STATES.

Thank you,
Randall

Please send e-mail to steven@rain.org and include at the top of the message or in the subject header: "Forward to Randall". Because these messages will be hand-carried on floppy disk or sent to me via modem only once or twice per week, it may take me a little while to respond.

Steve

The official docs from Atari--"The Technical Reference Notes" (which include the hardware manual)--are available as well. I really regret not seeing them years ago when I was doing 8-bit programming. IMO they make all other sources of info ("Mapping the Atari," "De Re Atari") seem rather wordy and incomplete.

Some info is in the original Developers manuals. The use to be
abailable at B&S Computervisions, probably still are. If you want to do
some serious programming and/or hardware hacking, you need these
manuals. They are available for all of the 8-bit machines except the
1400 series. If someone happens to see a set for the 1400XL or 1450XLD,
let me know. I want a set. I have the rest.

The 1400XL and 1450XLD were never released. There were a few prototypes
that got out. The 1400XL was aimilar in looks to the 1200XL, but (i
believe) had speech synthesis. The 1450XLD also included atleast 1
internal parallel connected floppy drive. It also looked like a 1200XL
but with the back part raised to house the floppy bays (2). I don't
remember what else it had, but at the time, it was the coolest piece
around and everyone wanted one. Sorry to say Atari dropped the ball and
then came out with the XE series instead.

It can't be either if you used it for your 8-bit. It must be composite and/or S-VHS (has y/c inputs) compatible. That is you have seperate luminance and chroma inputs if it is S-VHS compatible.

>Is is just for fun? Is it like old car clubs or something? Is it a challenge?

>The games? Nostalgia?
>

I'll add my $.02 to this discussion:

I've had a bunch of different computers over the years, starting with one of the very first 8K Commodore PETs, then an Atari 800, then a Commodore Amiga 2000, then (concurrently) the PC of the week, presently a 486DX5/133 MHz.

I will never say that the Atari is a "better" computer than my 486...I can't think of any sane person that would say that any of the 8-bit DOS versions are "better" than Windows NT Server, which is whay my 486 is running. Obviously, the 486 runs circles around the 800, and one can hardly compare 24Mb of RAM to 48Kb of RAM.

Having said all of this, I was so happy to get my old 800 back I was beside myself. You see, computers back in the early '80s had something these PCs don't have--personality. The machines were simple by today's standards, but they were FUN. I can't say that my 486 is fun--it's competent, fast, powerful, all of that stuff--but it's not FUN. I have spent about $100 so far getting my system back to where it was back in 1985, including getting some spare parts and such, mostly so I can play Archon. There's a PC version of Archon, but the version on the 800 is more FUN than the PC version.

The machines are so complex these days that neither I nor any other individual could ever understand all the wheels within wheels that make the things tick at a low level, even though I am a respected and highly-paid networking expert in the PC arena. I can tell you lots of stuff about how to make hardware and networks work, but I can tell you how to set up ROM calls to get the disk drive to read and write sectors on the 800. As another person mentioned, I can crack programs on the 800 but wouldn't have a prayer on a PC. Who's got time to learn x86 Assembler? It took me a couple of weeks to learn the simple 6502 instruction set.

Anyway, for me, the attraction to the 8-bit os a combination of nostalgia, fun, and an attraction to a much simpler type of machine.

Just my $.02.

First of all, this guy doesn't seem to know what he's talking about!
"Old 8088 computer," indeed! And when did Radio Shack _ever_ sell
anything but Radio Shack (TRS-80) or Tandy computers? They certainly
never sold anything from Atari as far as _I_ ever heard! I can't comment
on what an "Atari PC3" motherboard might be. I'd be interested in hear-
ing how this turns out, though. :-)

The reason I still use my 8-bit has nothing to do with what technology I currently have access to, either at home or at work. First off, they ARE fun. they remind me of a time when THEY were the top of the line in graphics and home technology.

With the Atari 8-bit and it's vast array of memory maps and books on it's inner detailed workings and all it's available programming languages (BASIC, C, Pascal, ACtion! Logo, Forth, Assembly, etc.etc) and it's relatively small size, it's a machine you feel you can TOTALLY master. You can control every aspect of it. You can customize almost every part of it, hardware wise and software wise. You are the boss. It dances to your tunes.

It has great games you still can't find on any game machine, PC or whatever.

It has Alternate Reality! :)

3490. Sio2pc Cables For Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-08 00:00:00 UTC
From: Bradley.Bacik@uc.edu
Message-ID: <4pagnh$67j@dfw-ixnews7.ix.netcom.com>
Source record: 83217

I made myself and a few others in the group sio2pc cables last fall.
Because of the "minium order" one contends with at electronic
suppliers that have the 232's and the diode I happen to have 2 cables
to sell. These are Nick's one chip design and the will work with
sio2pc and APE. The asking price is $50 per cable which includes
shipping.
Anyone interested please email me at : Bradley.Bacik@uc.edu

Please specify what type of pc connector you want, 9 or 25 pin

-Brad

Wow, this is really neat. I used to be really serious into the Atari 8bit scene many years ago, even wrote full bbs software. In any case, I have boxes of the stuff in the basement which someone might be interested in. Since I did development, some of it is particularly obscure:

A handful of Atari 800s (one with 80column adapter, all w/48k)
Atari 130XE
A handful of 850 adapters
A handful of 810 and 1050 drives (two of them HAPPY)
720K drive (requires percomm comtroller)
Multi-I/O board with HARD DISK CONNECTOR!
Atari HARD DISK will hook up to 130XE (including ADAPTEC controller)
(the hard disk is probably blown, but it only was 10meg anyway)
(the controller probably works though, will go up to 128meg)
(this thing is really neat, u never seen an atari move so fast...)
1027 printer
brother printer
pile of monochrome monitors
some 300 and 1200 baud modems
probably more I can't remember at the moment
also many great technical guides and info from ATARI and aftermarket publishers, including the MAPPING THE ATARI book.
Lots of software on disk, cartridges (basic xe, assembler editor, tools, and games)

This stuff can be viewed either in the Washington DC area or the Columbus, Ohio area. I travel between them frequently. Any reasonable offers accepted. I cannot guarantee operation of any individual piece because it has not been used in eons. I will ship it all if desired, but expect a lot of stuff...

I cannot imagine where people are getting this unbelievable statistics from
for emulation. The program doesn't run at least *half* of the stuff I put
through it.

>and turbo on/off.... Somethings don't work but I can say I have hopes
>they will and the way to make this possible is NOT by bad mouthing
>Derek or his software! If you don't care for Derek don't deal with
>him but go thru someone like Toad Computers their great people!

Since I purchased the software, I will say whatever I feel about it. No one
is going to change my mind that the Xformer is crap. After all these years,
it should be working right by now. My biggest problem is the blatant lies
used in advertising it. It does not work as advertised. The fact that any
one could call emulation what that thing does for sound alone kills me. I
would never buy another thing from him again. It was a mistake to buy Xformer
in the first place. I'm not looking to bad mouth anyone, I am simply
providing my experience with the software, and sharing my views on it. Had
someone been honest to me about Xformer, I would never have purchased it.

Just located some sofeware that I had prepaired 5 years ago?

K-P 1001, Basic games, Batts, Zapp, Richochet, Dragon , Encore
Seabat,Norad2, Arena, gobblers, Makedog, Disaster Lander,
Bomer,Golf Batgamon, Chickeb, Gooblins

K-P 1003, Keynote by Clarence Tippets, Non Basic, keyboard music
type file with source code you can modify..

K-P 1002, Dice, Acrobat, Biffdrop, Cannonduel, Gambler, Skydiver
Duengon, Monopoly, Timemachine, Starwarp, Simon, Guesser..these
are Basic type games..

K-P 1004, Times Table Tester math educational type disk written
because his daughters had a problem with math...by Clarence
Tippetts..Not before released.

K-P 1005, Demondungen Basic Game worth the effort...My 4 children
have used this game over the past 5 years and have enjoyed it,
None have beat this basic game due to the multi-levels envolved.

Price per disk...$3.00 shipping encluded...

Sure there is a spreadsheet for the Atari 800xl and other computers, There was one packaged with the Indus Disk Drive, Synase, put out Syncalc avanced electronic spreadsheet for the older machines and a version to take advantage of the 128k in the 130XE.

Peachtree, put out a complete business package for the Atari they do not have it avaiable anymore, I have a complete set, called Accounting, Back to basics accounting system, General Ledger, Accounts Receivable, Accounts Payable, for use with the Atari 800, 800xl, 1200xl...works on the 130xe also.

And there are probably several more products out there for users that others are familiar with and will respond.

As to competing with a PC, it just wasn't designed to in the first place. It does a good job for its class, and many hackers have taken it far beyond what Atari had in mind for it at the time..

I said it run 90% of what I fed into it and it does. Nothing about it
unbelievable to me! The first day I got it I sad and loaded perhaps 50
games. I found like 3 that did not work at all. I found a few that I
had to tinker with and still more that I needed to adjust the screen
with such as RiverRaid. I could not get SpartaDos to work but now that
I have 3.3a even it works great!

>Since I purchased the software, I will say whatever I feel about it. No one
>is going to change my mind that the Xformer is crap.

Thats your opinion and like you said since you bought and paid for it
you can say whatever you like. However there are always others with
there own opinions. Such as mine.

> After all these years, it should be working right by now.

Maybe so but many of those years were devoted on running it on the
Atari ST which had no where near the horsepower or the hardware to do
it! I BOUGHT the Transformer for my ST. I paid 39.00 for it with the
cable at the World of Atari show in DearBorn Mi back in 87 or 88. A
week or so later the program became public domain! Was I pissed? A
little but the idea that maybe with the PD available more people would
use it and help develope it. I was rather naive back then and actually
believed the ST had a chance of doing it. BIG MISTAKE! The PC version
though actually has a machine with the abilitys needed to make it work
without the hardware limitations. I've used XLit and found it to be
VERY promising but not a faithful as Xformer yet. With xformer I am
using joystick, d/d d/s disk imgs heck I have even created 360k
*.ATR files with programs on them that work great. Sound works though
not completly perfect, and I can use my 1050/ Track drives. I will say
I was a little upset that I have not been able to write to the
external disk drive only read/boot...

> My biggest problem is the blatant lies used in advertising it.
> It does not work as advertised.

Yup I'll admit there is much hype in its claims and I agree with you
there should be a little more honesty. However I have found far worse
blatant lies and hype from MANY companys including Atari themselves.

> I would never buy another thing from him again. It was a mistake to buy Xformer
>in the first place. I'm not looking to bad mouth anyone,

Maybe it was for you and I can appreciate your feelings. However as
far as badmouthing goes it would appear that you are doing just that.
Of course maybe your own dealings with Derek have warrented this. I
merely offered a counter position in that came from my experiance.

>Had someone been honest to me about Xformer, I would never have
> purchased it.

Yes it does sound that it was not close to your personal expectations.
Honestly though consider that you can buy an Atari 8bit computer like
the 130XE for as little as 5.00 today it would seem that the best way
of emulating would instead just buying the real thing. I did not by
the xformer to replace my Atari 8bit systems I bought it as sorta a
toy so it don't really bother me a great deal since I spent so little
on it...

I have the book (original disk version) - had all the components - have even mapped all the levels somewhere. And selected all the best bits, stored the better ones and tested them in combination. From memory though I couldn't find a shield that charged proficiently in one particular band that some saucers attacked with - it charged slowly in that band only from excess energy produced by the generator - meant it would only survive one or two shots in that region before becoming empty - didn't manage to find a shield that gave me large quantities in _all_ bands though, only ones that charged best in specific bands and small amounts in the remaining ones).

Saving before each saucer appeared however meant I was able to rip through the later levels with sub-standard equipment and pick up better bits early - it was only about 6 years ago (a few years after I first completed it) that I bothered to collect everything, and was still unable to find the perfect shield.

Anyway, did you find anything of interest after destroying the saucer base on level 20 or just an empty level and nothing left to do?

Paul.

3504. Good News, Bad News (help!)...

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-08 00:00:00 UTC
From: vhase@pop3.cris.com
Message-ID: <vhase-0806962147390001@cnc008031.concentric.net>
Source record: 83231

So, after poking around and finding out about as much as I can for a person who's never seen one before -- I go out in search of an Atari 800...

What I find at a Swap Meet is awesome! A guy unloading an 800, 410 cassette recorder, 1025 printer, tons of software and, what I thought was the coolest part, a Indus GT Disk Drive (that's a HALF height drive? Wow, I thought Apple II Drives were big!). All the power adapters and manuals. A bunch of Analog magazines. All of this at a decent price, $60 -- I know, some will think that's a real BAD price, but, hey, I got everything I needed all at once so leave me alone about it, 'kay? =)

So, that's the Good news..

Then, tragedy strikes (this would now be, of course, the bad news). During my first day of retro-gaming mania, the very cool, GT drive bites the dust. Dead. It's very cool sector display just shows gibberish and it spins no more. Gone (sniffle). I do some investigating and find that the seemingly-nice-guy-who-is-in-reality-a-filthy-no-good-so-and-so didn't have the right power adapter for the drive, so he just stuck one in that was kinda' close (drive and power supply were MIGHTY hot at the time of death).

HELP!! I NEED A DISK DRIVE!! I CANT BE BROUGHT THIS CLOSE TO THE EDGE AND JUST LEFT HANGING!! all those wonderful games -- ALL ON DISK (unless, of course, I want to play the Kids On Keys or Alphabet Zoo carts -- *blech*)!

Darn it, it was such a nice drive. Double density, two ports in the back to allow daisy-chained drives (or the cassette recorder) without an interface. LED track display, write-protect button. Switch from single to double with the press of a button (gotta stop now, getting all misty-eyed again)....

So, If you've got a drive or two to unload, drop me an E-Mail. I can do NOTHING until you do (except re-learn the alphabet).

Thanks in advance ---

Vincent Hase
(vhase@cris.com)

BTW, will I need the interface if I use more than one Atari drive (or, worse yet, with the first one)?

er, lets remember that when the 520ST came out, your average PC ran at
4.77Mhz, maybe had an 8Mhz TURBO mode and came with 640K and an EGA
screen if you were lucky. A winchester drive (hard disk) was a costly
optional extra for ALL machines then, even PC's. I don't think that
spec of PC clone could emulate a dog turd, never mind an 800XL.

Hi everyone,

Awhile back I found a large 16 meg sparta dos disk image for sio2pc...

Since then I have lost it as well as the ft site which I obtained it from.

Does anyone have such an image out there? Anyone know of an FTP site I
can obtain this image from? Please send email since I am unable to check
this site on a regular basis...

Thanks,

Mark

3510. Black Box

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-09 00:00:00 UTC
From: Jim Graham <jacomp@one.net>
Message-ID: <31BA6608.74E@one.net>
Source record: 83237

I have a CSS Black Box with cables for SCSI, modem, and printer. I also have the drive I used, but it has
striction(it sticks!) problems. Works great when I can get the drive to spin. Make me an offer. Send to
jacomp@one.net I also have a couple of 800XL's(working),a 130XE(works) and 2-1050 drives(also work).

If someone out there is interested, I might sell my entire collection of machines and software. This
includes at least one of every production 8-bit Atari made.(One is a Rambo 800XL with 256 and Newell Omniview
OS with a switch for the original OS.) (from the 400 to the XEGS). Also many other things such as 810 drive,
Indus drive, Atari's 360K drive(XF..), US doubled 1050, ICD Serial/Parallel interface, 80 col. box with Atari
Writer 80, a couple parallel interfaces, new in box 1020 printer, old 820 printer, about 50 carts and many
disks, with instructions. I also have a good collection of Analog, Antic, and Compute! magazines and many
books. Atari touch tablet, ect. I really don't want to piece all this out, I don't have the time to fool with
it. E-mail for a complete list if you are really interested. Everything mentioned above works and most is in
almost new condition. I do not have boxes for most, but I do have most of the documentation.

If you're really into classic computers, I also have several Commadore machines, 64 & drives, Vic 20,
SX-64. A couple of TI 99/4a's,(biege and silver) one with expansion box, an Aquarius(Mattel), a Timex Sinclair
with 16K, a Apple II+ and drive II, and a Tandy Color Computer 2.
Thanks -Jim jacomp@one.net

3512. 1050 in a daze...

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-09 00:00:00 UTC
From: mldcs@anet-dfw.com
Message-ID: <4pe4pa$j6s@news.anet-dfw.com>
Source record: 83239

I left my 1050 on for several days, and yesterday I noticed that it was sitting there with the "door" open and the access light coming on every five seconds and shutting off again. I can hear some kind of motion inside when the light is on. The system will not boot from the floppy anymore. It goes straight to the Memo Pad. Does this sound like anything easy to fix? Or is it time to shell out for a new 1050?

Thanks...

>> Isn't that an oxymoron?

What I meant was that I never was able to buy an Indus drive that
didnt get CONSTANT G4 Read errors- I had three of them then I learned
better and stuck with 1050 happies for my DD use.....everyone who
called my BBS back in 83-85, sorry for all those bad D/l! Eventually I
ended up storing the bulletins on them (the ones that werent in the
ramdisk)

If I recall from my last usage of xformer, if you enter a command line
like this it will boot dos, and set the image as d2:
ATARI mydos.atr qbert.bin
where atari is whatever your xformer executable is called, mydos.atr
whatever your dos is called, etc. etc. etc.

Yes, Indus drives were pretty cool back in Atari days. But they were
the drive that used DC adapters with the same plug as everything
else(AC).

Have you tried finding the correct power supply?

As many have done lately, I too have revisited my 130XE in the basement, I also have an old 386/16 with a 100Meg HD..

Is there software/methods of using the atari software with the 386 or better still can I beef up the atari with the parts from the 386. I would be nice to use the HD with the 130XE

3517. Ape Diagrams.Anyone..?

After driving Steven mad asking questions re APE I now want to get on
and build the 2 cables. I have had not much luck getting one of them
from the online manual for ape.....Very busy page and I have only
limited time to get online at the moment...:-((

SO if anyone has diagrams for the cables (1489 & 14c89 versions)
please please mail them to me so I can start storing my collection in
the safest possible means....

BTW thanks for the help Scott (yogi). Keep the CD going...

TIA....

FYI, I just took a look at one of mine. The Output is listed as
11.5 VDC @ 1.95Amps. I have fixed them in the past, a couple that someone
connected to a 1050 Power Supply. In both cases all I had to do was
replace the 2 Voltage Regulators mounted on the Main board, towards the
rear. They are a little tricky getting the Floppy deck out if they are the
early production ones.
Good Luck; Rich Mier

I just bought an Atari 800XE with a XC12 tape drive (at a flea market), and was wondering how it works. I tried hooking it up to my TV but all I see is a black screen. Do I need system software or is it in ROM? I don't have any tapes. I don't even know if the computer works, I would appreciate some help for a true 8-bit beginner!
Thanks, Hal

How's this for a deal...I'm giving my Atari 800 and other hardware away for FREE. All you have to do is pay for the shipping. I have an 800, 2 5.25" floppy drives (one is a 1050, one is from Indus), a 300 baud modem, and a bunch of software with the manuals. All the cables are included and all the hardware still works, as far as I know (it did the last time I hooked it up two years ago). I would like to give all of it to the same person so I don't have to deal with shipping hassles. I would like to give this stuff to a charity, but I will give it to any good home if no charity is interested. If you are interested, drop me a note at FreeThinkr@AOL.COM.

Hmmm, why do you say that? I've worked with the Atari 8-bit disk drives for years and have always found them to be the most reliable. I'm still using the one I originally bought in 1983. Rana's were the most troublesome, even when they were working!!! :)

> Good Luck; Rich Mier

Well, now this makes things more interesting... My supply IS 11.5 volt @ 1.95 amps. I THOUGHT that was incorrect due to the original brochure (this guy kept everything) listing a power consumption of 12 volt @ 2.5 amps.

Perhaps that was just the working specs in the listing. Obviously, we can't both have the same incorrect supply (a Databyte?) -- and yours work.

So that leaves me with a new question -- what the heck happened?

The power DOES come on, but it doesn't spin and go through the startup "pass". In the track window is something that looks to me almost like an error code, First a 6 appears, then an 8 and another 8. If, after multiple turn-ons, the drive DOES spin (this has happened twice), nothing else happens. It just spins with no information in the track window. In either case, the Atari doesn't recognize it anymore.

Were the units that you fixed totaly dead, or did they show strange signs of life like I have mentioned above? Also, how hot do your drives and power supplies get? When mine stopped, as I mentioned, they were extremely hot (not "egg cooking" level, but definitely beyond the realm of normal -- somewhere around "frighteningly hot").

I'll definitely look into replacing the voltage regulators anyway. Why not, it does no good to just sit there and STARE at the thing. =)

Thanks for your input --

```
OS/A65
------

This is the announcement of "OS/A65" version 1.3.6g,
a 6502 CPU Multitasking/Multithreading operating system
I wrote some time ago and which I have put on the Web.
It's copyrighted under the GNU public license.

For those who do not already know about it, please see the info at
the end of this text.

The new stuff in this version is:

Fully tested and ported C64 version available!!!
-------

The C64 port means, that the whole stuff has successfully been ported
to a computer without MMU (which the originating CS/A Computer had),
including making all the stuff 'thread-safe'.

The C64 port will also surely give a good base for other ports to common
6502-based computers without MMU, namely the apple ][ and some Atari 8-bit
machines. But I don't have any of these machines any actually I don't have
the time. But if any of you wants to do this, feel free to do so.
Finding the '#ifdef C64' should be a good start to see what is
C64 specific and what needs to be changed for other systems
(have a look at oa1/oa1si.a65, oafs/fsiec.a65, oadev/oa1dt.a65).

You find it at the usual place: http://www.tu-chemnitz.de/~fachat/csa/

From the old announcement:

------------------------------------------------------------------------

OS/A65
------

This is the announcement of "OS/A65", a 6502 CPU operating system
I wrote some time ago and which I now put on the Web. It is
copyrighted under the GNU public license.

Some of its features are:

- preemptive multitasking/multithreading

- (kind of) microkernel design
```

- filesystems for PC FAT disks and CBM floppy drives on a IEEE488 interface
or CBM serial IEC bus

- runs on 6502 computer with and without MMU

- developed on a selfdesigned and -built 6502 computer

If someone is really interested in, I can also write an article for
a publication or so about it. But, well, 8 bit times are gone...

I'm coming from the Commordore world, not from atari (8bit) nor apple side.
The hardware is close to CBM3032 compatible, but the kernel itself is
completely hardware independent. So just the device drivers have to
be rewritten for porting it to another platform.

It is a good machine/OS to do some small control tasks,
where you can watch them from another shell...
My computer controls my audio equipment via infrared signals ;-)

Well, if you are interested in, here is it's homepage:

http://www.tu-chemnitz.de/~fachat/csa/

so long
Andre Fachat

None of the 8-bit computers ever came with any kind of storage drive floppy, hard or otherwise. You can add a hard drive to the 600XK, 800XL, 65XE and 130XE since the XL's have PBI ports and the XE's have the ECI port. To do this you need some interface unit such as the CSS Black Box, or ICD MI/O. Then you need an SCSI or SASI to MFM or RLL adaptor and of course the hard drive and power supply to run the drive. You'll also need a DOS that can deal with hard drives, like MyDOS or (IHMO better) SpartaDOS. I use SpartaDOS X, a 10MB drive a 256KMI/O and SASI/MFM adaptor on my 130XE. Works Great!

It's a COMPOSITE COLOR MONITOR -- It is NOT VGA or SUPER VGA compatible.

> screen, when it's first turned on?

The original 800 did not have basic built in, it was released on cartridge.
(The XL and XE's do have built-in BASIC, however)

As for the memo pad, there's really not much to do with it other than type
messages on the screen.

> - How do I use the data cassette, if I can fix it, and where can I
> get a schematic for the data cable& cassette player.

To use the cassette, hold down the start key when you turn on the computer.
The machine will make a long beep-like sound. This is the prompt to
load a cassette, you then need to push play, and return on the computer
(I think) The tape should then start loading.

If the program on cassette is a BASIC program, you of course, will need
a BASIC cart. To load a basic program from cassette, use either
CLOAD or LOAD "C:", when it's finished loading, type RUN.

> - What type of carts does an 800 take? e.g. Same as game machine XX??

Do you mean "XE Game Machine"? If so, yes. Many cartridges are labeled
"LEFT CARTRIDGE" on the top, but nearly all use the left cartridge slot on
the 800.

I remember that recently Radio Shack started selling classic Atari carts
through their catalog. I don't know if they've discontinued this practice.

Also they no longer sell Tandy computers, they're now into selling IBM
branded machines, and recently they were selling ASTs.

>
> Am I dreaming this, or does anyone else remember this as well?

You are correct. They came up with a few clones. (1986 or 87 I believe)
The line didn't last long, the lack of expansion slots was their downfall.

> screen.

How exactly did you hook it up? The single RCA jack in the back is not for
composite video, it requires a switchbox (which Radio Shack still sells).
If you have a monitor port on your model, you can get a connector for it
which has composite output.

> Do I need system software or is it in ROM? I don't have any tapes. I
> don't even know if the computer works, I would appreciate some help for a true

You should have BASIC built-in. Most software was distributed on cartridge
or 5 1/4" disks. It's tough to find cassette tape software. Cassettes are
a royal pain anyway, you won't WANT to use them.

I don't think that the 130XE will take your PC's hard drive -- if you really want to waste your hard drive (please don't flame this response), I'd get an emulator -- I think Branch Always Software sells one -- and place that along with a ton of ROMs on your hard drive, upgrade the 386 to a 586 -- Global and other mail order places sell them -- and then, you have a really supercharged Atari without bothering with all the wires inside it (plus, you will still have some more space to run apps on your PC). Granted, a few of the programs will not work, but I can't really find a better solution.\

Cassettes have probably disappeared from the market, not because they weren't popular (remember all the Thorn Emi games that were only sold on tape format), but since the tapes have probably deteriorated (anyone who has used them lately will realize how often the tape will snap in the middle of loading an old program). You're probably right about not wanting to use the cassettes -- they were a real big pain.

Anyway, I'd look for a 1050 disk drive (mine held up pretty well until I blew it up by plugging in the wrong power supply); it's a LOT EASIER to use -- Atari copied its usability off of the old Apple II's -- and some of the newer, better games that were released after the companies migrated from tapes to disks and before the PC changed everything, will run pretty well (if you look for them).

3545. XL mode on PC XFormer

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-10 00:00:00 UTC
From: Ken Siders <103311.1224@CompuServe.COM>
Message-ID: <4phdh2bce1@mhafn.production.compuserve.com>
Source record: 83175

To make more ML programs work in XL mode.

Make a backup of ATARIXL.ROM, you might still need it for some cases. If you don't have this file with PC Xformer download an earlier version if Xformer and get it from there and put it in the same directory as the PC Xformer EXE file. (seems like it wasn't with XF33demo when I downloaded it). If ATARIXL.ROM is present it loads it, if it is missing I think it has an internal copy it uses.

In the ATARIXL.ROM file: (assuming first byte in file is byte 0)

Change bytes 17, 291, 657, and 1137 to 169
Change bytes 18, 292, 658, and 1138 to 0
Change bytes 19, 293, 659, and 1139 to 234

Change bytes 0 and 1 (word size) to the new sum of bytes 2 through 8191.
(This should be decrementing the value by 12 but I am not sure)

This changes a LDA TRIG3 command to LDA #0 and NOP to let the OS know a cartridge is not installed.

Let me know if this works for anyone.

Go to http://www.nacs.net/~classics/ and read about APE.
Get (or build) the sio2pc cable and use your PC's HD to store
your atari files as disk images (.xfd / .atr).
You can now use the PC as an atari disk drive !

> Imageman.
>

Hi !!.
You need not only write DOS.SYS and DUP.SYS on a disk to make it boot.
you need to write dos files using Dos.
In the Xformer emulator comes a file named DOS25.XFD, you can convert it
ti ATR for use with XL-it!
start your emulator like this:

atari -nobasic DOS2.5.ATR YOURDISK.ATR

where YOURDISK.ATR means the disk you wnt use as boot file,
then go to DOS menu and select option (H), write dos files to disk 2

so, you can use now yout .atr file as a boot disk.

I'm starting a cmputer collection, picked up an atari 800 with no
power supply and a data cassette with a broken data cable for $4 .
Also an atari cart. that didn't fit in either slot.
I know nothing about Atari computers, thanks to Atari8bit FAQ I found
out my Fax modem power supply was the same as an 800's.

This is what I'd like to know..
- Does this computer have a built in Basic Language? If so, where can
I get a Text manual for it? Can I get a Doc for using the note pad
screen, when it's first turned on?
- How do I use the data cassette, if I can fix it, and where can I
get a schematic for the data cable& cassette player.
- Can I connect my PC to the 800 without having to find a RS232 "Box"
to trensfer programs& gamefiles?
- What type of carts does an 800 take? e.g. Same as game machine XX??

Ivan,
Your new version of Imageman (2.0) is fantastic. I was using your previous version almost daily. This upgrade is terrific. Now I don't have to remember the names of the images I want to manipulate. This is a major improvement.
Thank you for your programming efforts.

The 800 does not have a built in language. It uses a Basic cartridge.
The 600XL, 800XL, and XE models had Basic built in.
The Note Pad doesn't really do anything except let you type on the screen.
You can't even save what you type. The XL/XE computers had self test
programs instead of a note pad.

> - How do I use the data cassette, if I can fix it, and where can I
>get a schematic for the data cable& cassette player.
If you find any pre-recorded cassette games, you would run them by
pressing Start on the computer and Play on the cassette player.
You might find schematics somewhere, but it's probably easier to find
another cassette player, or better yet, a disk drive.

> - Can I connect my PC to the 800 without having to find a RS232 "Box"
>to trensfer programs& gamefiles?
Look up "SIO2PC" in this newsgroup on Dejanews or Altavista.

> - What type of carts does an 800 take? e.g. Same as game machine XX??
>
Same as the Atari XL or XE. Not the same as the 2600, 5200 or 7800.

I don't know... I've owned these two Indus GT drives since 1984 or so, and they've never given me any trouble. I've loved them!

>
>Paul.
No paul,
Sorry to say...even with the cool laser that killed ships in 1 or 2
hits, adn the shields that recharged almost instantly in all 5 or 6
bands, the game still ended rather sadly after all the bases were hit on
level 20..I think I do remember going back and forth and killing level
20 several times over..if you dont save it, you should be able to
re-deploy there...It has been far too long (six years or so) since I
have played it also....Just one more reason I need to backup all my
Atari software on IBM format and get with the 90's.
Especially since Im a COMP science major...My atari can ONLY do soo much
for me....Mind you..attaching to my mainframe on a dummy terminal
through 9600 baud isn;t anything to sneeze at for my setup using
an atari....But I would like to save some of these disks before they
desolve in front of me.

Sorry, I have only the one board. The interface to the XE is a card
like device that has 2 cart slots on it. It plugs into the MI/O cabme
then into the ECI port. Works great with R-Time8,SpartaDOS X and BASIC
XE (All plugged in at the same time.) I suggest contacting Fine Tooned
Engineering or possibly B&C Computervisions.

3562. FS/T: Atari 8-bit computer items [06/11/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-11 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4pje2f$jle@sjx-ixn6.ix.netcom.com>
Source record: 83189

All VGA FS/T lists are updated weekly and are available on the WWW at
http://www.io.com/~vga2000/

This list was last updated on 06/11/96

NOTE: Screen shots of some of these games are available on my
web site.

I have the following Atari 8-bit software and hardware for sale or
trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. For faster service, please
include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
given priority (especially if the trade offer overwhelms me).
I collect for over 40 different systems, so please feel free
to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed.

5) No package deals on games or systems. All prices are clearly
listed. If you want a better deal, please check out the
volume discounts listed at the beginning of this message.

6) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. My personal
philosophy is that something is only worth what someone is
willing to pay for it.

7) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted.

8) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 6.00 Atariwriter
$ 5.00 Basic -- for the 400 and 800
$ 6.00 Basketball
$10.00 Delta Drawing (Spinnaker)
$ 7.50 Deluxe Invaders (Roklan)
$10.00 Jumbo Jet Pilot (Thorn EMI)
$10.00 Kids on Keys (Spinnaker)
$10.00 River Raid (Activision)

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1200XL COMPUTER.

This item has not been tested.

$19.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #3

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 65XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$34.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #5

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$32.00

*****

LOT #6

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 9.00

*****

LOT #7

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$24.00

*****

LOT #8

ATARI 800 COMPUTER *AND* ATARI 1050 DISK DRIVE, for parts only!

These items are not working, but might be used as a source of parts
(example: the 800 keyboard and chips).

$14.00

*****

LOT #9

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$29.00

*****

To reserve an item listed here, please contact me.

Please include a list of the items that you are interested in,
and your full postal mailing address. Thank you!

3565. WTB: PAL Atari

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-11 00:00:00 UTC
From: scharles@superlink.net
Message-ID: <31bd8f0b.2023419@news.superlink.net>
Source record: 83192

I am looking to buy an Atari in America that's been modified with the PAL Antic so that the screen doesn't jump on the PAL software. Prefer a 130xe but will live with an 800xl. This acqusition is essential to the building of the 8 bit archive, as I am receiving hundreds of games that seem to be PAL, they start to run, but crash, and I can't tell if this is because it's a corrupt file or because I do not have a PAL machine. Or if anyone has the PAL antic available and the modified OS rom, will buy those for insertion in my own 130xe.
Thanks! Email info to: scharles@superlink.net

3566. Community Memory discussion list

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-11 00:00:00 UTC
From: mcurrent@carleton.edu
Message-ID: <19960611120858.aaaa001vW@babyblue.cs.yale.edu>
Source record: 83193

From: Patrick Hogan <phogan@ala.org>

NEW LIST ANNOUNCEMENT

Community Memory -- Discussion List on the History of Cyberspace

Please repost widely

Computer Professionals For Social Responsibility (CPSR) announces the creation of "Community Memory -- Discussion List on the History of Cyberspace," a moderated discussion list whose purpose is to explore the origins, history and development of computer networks, computer hardware, software, and computer science, and the environment collectively known as "cyberspace." Emphasis is placed on human factors -- on who knew whom, how ideas spread and originated.

This list is dedicated to the belief that awareness of history is an essential ingredient which can help us make reasoned decisions in the present and future. By exploring the history of cyberspace, topical issues we face today -- such as privacy concerns, equality of access to computing, hacking, computer literacy, intellectual property rights, funding long-term R&D -- are placed in a broader, historical context. A primary focus will be the evolution of ideas in computing and the use of computers.

Many of the people involved in the creation of important technologies and organizations are on-line and we ask them to consider joining this list. CPSR hopes to attract people who can provide first-hand accounts from a wide-range of experiences, going back to origins of digital computing in the 1940s to the present day. These include government-funded projects, academic programs and organizations, private enterprise, grass-roots organizations.

CPSR also invites anyone with a curiosity and interest in learning about the origins and history of cyberspace to subscribe.

This list is named Community Memory for two reasons. It wishes to store and record the memories of how this world of interconnected computers and people came to be. The name also makes reference to the original Community Memory Project in San Francisco, created in the early 1970s, which may be the world's first grass-roots electronic bulletin board (whether this is true is an example of an appropriate discussion subject). This list will be archived and stored in a companion World Wide Web site, with information stored by topic (http://www.reach.com/matrix/community-memory.html). Archival material, in electronic format, is also welcome on the Web site.

Given the breadth of this subject, Community Memory is moderated to insure topicality and focus. The degree to which this discussion list fulfills its mission depends entirely on its ability to attract people with primary-source information. It is difficult to judge what message flow will be like at this point. The moderator, David S. Bennahum (http://www.reach.com/matrix) welcomes questions at davidsol@panix.com.

To subscribe to:
"Community Memory -- Discussion List on the History of Cyberspace"
please send a message to:

listserv@cpsr.org

The body of the message should read:

subscribe cpsr-history <your first name> <your last name>

****
ABOUT CPSR:
CPSR (http://www.cpsr.org/home.html) is a public-interest alliance of computer scientists and others interested in the impact of computer technology on society. As technical experts, CPSR members provide the public and policymakers with realistic assessments of the power, promise, and limitations of computer technology. As concerned citizens, we direct public attention to critical choices concerning the applications of computing and how those choices affect society.

Please Repost Widely

Date: 1996-06-11 00:00:00 UTC
From: dh395@cleveland.Freenet.Edu
Message-ID: <4pkbid$qj8@madeline.INS.CWRU.Edu>
Source record: 83194

In a previous article, amdf@mail.telepac.pt (Agostinho M. Silva Ferreira) says:

>Is it possible to use my good old 1029 dot matrix printer
>with my PC ?
>
>All suggestions and solutions are wellcomed.

It would be quite possible w/ the prosystem cable and a small TSR to
capture requests to the printer and send them to the 1029 using the
correct protocol.

If there is enough interest I might write such a program. Anyone
interested please e-mail.

> so, you can use now yout .atr file as a boot disk.

Imageman creates disks as though they were formatted with AtariDOS. This
includes the 3 sector boot loader. In Imageman version 0.1 this boot
loader was corrupt and hense if you copied DOS.SYS and DUP.SYS onto the
disk it still wouldn't boot. Version 0.2 is out with this bug fixed.
It can be obtained from the XL-IT site:
http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html

By following the Emulator Tools link.

I left my 1050 on for several days, and yesterday I noticed that it was sitting there with the "door" open and the access light coming on every five seconds and shutting off again. I can hear some kind of motion inside when the light is on. The system will not boot from the floppy anymore. It goes straight to the Memo Pad. Does this sound like anything easy to fix? Or is it time to shell out for a new 1050?

Thanks...

>goes straight to the Memo Pad. Does this sound like anything easy to fix? Or

>is it time to shell out for a new 1050?

Call Computer Software Services, at the telephone number(s) recently posted here (or call directory assistance for Rochester, NY, area code 716), and speak with Bob Puff. Believe it or not, he has in the past been able to diagnose drive problems over the phone, by listening to 'em run (or not), along with your description of the symptoms. Then he can presumably tell you whether HE can fix it, or what to have someone ELSE fix. Best of luck to ya.

Actually the Black Box doesn't add any extra ram. You have the option when getting one to have some extra ram that is only used as a printer buffer. The MIO is the device that adds extra RAM (256k or 1Meg). I find the Black Box is a much more stable hardware add-on than the MIO. I did some MIO repairs and they are a bitch to fix when something goes wrong with the ram circuitry. Also if you don't have proper cooling on the MIO they will eventually warp due to the power supply being slightly inadequate. I also found that the Black Box works with odd hard drives better. I had a ancient 10 meg SASI drive made by XEBEC that the MIO just couldn't format but my Black had absoulutly no problems.

3577. Poor Poor Atari Oldtimers

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-12 00:00:00 UTC
From: "robert cortese"@netmagic.net
Message-ID: <4plmu8$s6g@news.netmagic.net>
Source record: 83110

Ahh, the days of past are gone...

Lately my pops has been feeling a little depressed. You all know him as RICORTES. This was his last haven to talk real about the atari and not all of this flaming stuff. C'mon people, stop wasting time on trying to find cracked games and stuff like that. I know Derrick Mahocka is a prick but I gotta give him some credit for bringing new interest into the atari world.

What I wanna see happen...

Derick and all the other Emulator writers need to quit trying to be a stingy with their code and let some other people look at it. I've heard my pop give at least 20 good sounding tips on why all the emulators run slow and how to go about fixing them. I don't know if he's reading this but other guys too like Bob Woolley could also put some good stuff into the pot of emulators as well.

Derrick I must of heard at least a million times complaining, "you damn fucking pirates,, fuck you you pee brained pieces of shit" or something to that effect. If your so damn worried about piracey quit sniveling like a little bitch and do something about it. Go talk to all the people that own these games AKA phillip price, and ask them if you could have the right to sell them on a web page. I would gladly pay $10 bucks for AR if I could play it in a window while downloading, but most of the emulator out there don't work with it yet so I gotta sit here and bitch.
Hey I got 40 megs of web space I don't use. I would gladly give it up if someone who's worked with these people before could go in and get the licenses for all the old software. I'd pay a buck for any of the old cart games as well.

I guess I just wanted to let you oldtimers know there are some youngens out there who actually hold down a real job and would gladly pay you for your past endeavors. I currently got a copy of ar the city and ar the dungeon so I guess I owe $20 bucks. Either Gary Gilbertson, Dan Pinole, or phillip price please respond to this I really want to mail you some cash. I have no right to hold onto your code without paying for it.

Allright so all you people that can't tell me what a display list interupt is get the fuck out of here. My pops is sad as hell that you bastards are taking away his favorite newsgroup. Atari.wares is for people with no brains or class, this is where all the REALLY COOL people hang out. Your not cool so LEAVE!!!

Well, there are a few companies out there selling PIRATED software -
now is that right?
All everyone "whining" as you say it with the software wants is to
distribute it freely- just like the Apple II and C-64 archives are
doing. Nothing at present exists like that for the Atari, and all
those old programs are withering away on floppies somewhere. In fact,
the authors probably don't have copies either. (In fact, P.P. gave
permission for AR to be distributed as freeware).
Since I have started archiving the 8 bit stuff I have gotten requests
from about 4 software authors that asked for a copy of their own game!
So an archive would seem like a good idea, no?

You might try this. Take it apart and reseat all of the socketed chips
under the metal RFI shield. If this doesn't work it 'Might' be the CA3086 at the
left rear of the main board. When it sits there cycling, it sounds like the UCode
is trying to initilize, getting so far and then going back to Address 00 and restarting.
I've seen it before but it always seemed to be something different. A few just
needed the chips to be reseated.

Good Luck; Rich Mier

3581. I'm APE over APE!

From: gt7288b@acmex.gatech.edu
Message-ID: <4pnjpu$q13@catapult.gatech.edu>
Source record: 83115

Has anybody gotten MYDOS to work with the Xl-it emulator? I have no problem running it under PC Xformer. Was just wondering if anybody knows of a fix.
On a DOS note, I'm guessing all those SpartaDOS's don't work since the emulators don't emulate the 130XE (I seem to remember they required one of the later computers Atari put out) It was always my favorite of the Atari DOS's.

Not much, maybe $10 for the 400 (depending on what kind of upgrades you might have done to it)

Carts are more a collectors realm, and its possible that you have some that are worth something. Average is about $1 per cart, tho'

Hi ---

I'm relocating to Silicon Valley for a cool job, and getting the heck out of Atlanta, Georgia (Buckhead area.)

If you appreciate obsolete computer equipment and would like any of the following and are WILLING TO COME PICK IT UP (I repeat: I will not be shipping anything!), the following is available for FREE since it's hard to justify paying to ship:

If you don't know what any of the following are, trust me --- you DON'T WANT IT! ;)

1. TRS-80 Model 3 w/2 floppy drives and 48K (?) of RAM.
2. Monochrome (green?) composite monitor from about 1983.
3. Atari 1020 printer/plotter
4. Various Atari serial/parallel interfaces (e.g. R-Verter, MPP-1100, and a P:R: Connection)
5. An Atari Rana 1000 floppy drive. (The one with all the cool lights.) Note that door is slightly damaged, and disks are sometimes hard to take out.
6. Two feet of Antic (Atari) magazines from the mid 80's.
7. A Black Box DB-25 A/B switch.

All of the above that is not claimed will be sent to the dumpster by June 24th. Feel free to send E-mail ASAP if interested.

Ermm...I think Pc Xformer is a 'commercial' product that Darek gets his
profits and paychecks from. If you have any suggestions, just give it to
him and he 'should' make revisions...though I'm STILL waiting for
joystick support on Gemulator. The emulators that are PD you may get
sources but you must be a good programmer.

Alright, first off all...to get the copy portected games to run on the
emulators, you must use cracking programs first. Disks are hard and
carts are tricky. Even if you only crack your own games, you still would
have to use your 8-bit so you might as well just keep it for game
playing. This I have learned on my own. And yes Darek does complaim
about pirates, but he even told me I can get cracked copies of cart games
on-line. Go figure...

Is this 'exclusively' for guru programmers and not anyone who use an
Atari? This computer elitism makes me sick. I'm sorry that most people
are asking for cracked games to run on emulators, but consideration runs
both ways. Thank you.

Is this person for real? Are they just old enough to reach the keyboard,
or are they illiterate? Must be reading some other news group. This does not
seem to be an Atari.wares group, especially since there are no binaries here.
It's nice that you want to send those fellows some cash, but those games
haven't been in production for years. I would hazard to guess that most
people around here could describe a DLI, not that I have any idea what that
has to do with the rest of that rambling, incoherent post. How bizarre.

Source record: 83122

I'm posting this for my son, who has moved to a Falcon.

The following are offered as a package deal. The 800 is
known to work. The 130 may have a keyboard problem with
one key, at least two of the disk drives have been used
and the other two power and spin but have not been tested.

1-130XE
1-800XL
4-1050 disk drives
1-1010 tape drive
2-1027 printers
1- computer power supply
2- disk drive power supply

Some software and cables.

$45.00 (obo) shipped within the U.S.(48 states).

Will ship COD, COD fees extra.

-> From: zabin@berlin.snafu.de (Hal Zabin)
-> Subject: getting started with a 800XE
-> Date: 9 Jun 1996 19:44:05 GMT
->
-> I just bought an Atari 800XE with a XC12 tape drive (at a flea
-> market), and was
-> wondering how it works. I tried hooking it up to my TV but all I see
-> is a black
-> screen. Do I need system software or is it in ROM? I don't have any
-> tapes. I don't even know if the computer works, I would appreciate
-> some help for a true 8-bit beginner!

There is no such thing as an 800XE. You might have an 800XL, or a 600XE, or something else. The cassette recorder is just a crude storage device; you can save files to it or load in files from it--very slowly--but if you only have a cassette recorder you're basically stuck with ROM plus whatever cartridge you might put in the cartridge slot.

If what you have is an old 800 (no additional letters), without cassette tapes or a cartridge (like BASIC) you'd be nowhere. When the original 400/800 computers were turned on without a floppy disk drive (from which one would load in a DOS program), they went into "memo pad mode" on the screen. It said "memo pad" on the top line and you could use the keyboard to doodle. The XL/XE computers have BASIC built in; when you turn them on without a disk drive being attached you should go straight to BASIC and get a "ready" prompt at the top of the screen. If you didn't get that, you'd at least get the XL/XE self-test mode. In any of these three variations you'd get a screen with writing, not a blank blackness.

But even tho you don't get a screen it's possible the computer works. Maybe your power supply unit is bad. It might have a fuse blown out, for example. The first test that should be done is to plug in a different power supply and then see what happens. (Which is obviously a problem if you only have one.) You also need to make sure that it's the right power supply for the computer model, which means you have to identify the model correctly. And make sure the power supply cable is plugged into the connection marked "power" on the computer!

------------------------------------------------------------------------
SWEDISH ATARI USERS' ASSOCIATION (Svenska Atariklubben)
IN COOPERATION WITH NoCrew PRESENTS

-* THE NORDIC ATARI SHOW AND CONVENTION 1996 *-

WITH CONVENTION, EXHIBITION, SEMINARS,
DEMONSTRATIONS, CONTESTS ... AND MORE!

AT KORTEDALA GYMNASIUM IN GOTHENBURG, SWEDEN
ON THE 14th, 15th and 16th OF JUNE
------------------------------------------------------------------------
NOTE: The information in this text is not complete! Updates will come.

PRESENTATION

NAS was first arranged in 1995. It's a special show with a hacker convent,
exhibition and different seminars - all in one place.

This time the Nordic Atari Show is held in a school building, Kortedala
Gymnasium, in Gothenburg. It offers several small rooms for the hacker
contests and seminars, a big lecture hall for showing demos and films and a
normal size restaurant for the exhibition. Showers and dressing rooms are
available, and there is free carparking in the school area.

Pizza restaurant, cafe and other shops are only a few steps away from the
school. If you want to stay at a hotel please contact us for information
or visit our Webpage for details (http://www.tripnet.se/sak/nas).

Kortedala Gymnasium is fifteen to twenty minutes away from the central part
of Gothenburg. There are good possibilities for communications by tram or
car.

The dates are the 14th, 15th and 16th of June. Gather with your friends and
join us at a very fun and exciting show for Atari users around the northern
and european part of the world!

This year the exhibition and seminars are arranged by the Swedish Atari
Users' Association (Svenska Atariklubben), and the hacker convent by
NoCrew.

Below are all the activities, and the low entrance prices. Last year they
were a little bit high, but this year we hope it's suitable for all
wallets!

THE ACTIVITIES

For more detailed information see below.
```

exhibition
retailers and different associations will be there

hacker convent
competitions for FALCON, STE, ST and 8-bit

demonstrations
Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars
about programming, Internet, multitasking etc

others
competitions for the non-programming experienced
(lottery, MidiMaze-contest, harddisk throwing, CocaCola-drinking etc)

THE PRICES

type payment SAK-member non-member

3-day entry prepaid SEK 100 SEK 125
3-day entry at the door SEK 125 SEK 150
1-day entry at the door SEK 50 SEK 75

The T-shirt is gasping yellow with a fine black print. Highest quality.
Don't miss this fantastic offer. Limited quantity.

T-shirt prepaid SEK 75 SEK 90
T-shirt at the door SEK 100 SEK 120

A cafeteria with low prices on CocaCola, Jolt, sandwiches, buns and
other tasty products will of course be available.

If you live in Sweden, you can order your tickets to NAS96 via
our Webpage at http://www.tripnet.se/sak/nas

Otherwise, if you live outside Sweden or don't have WWW access, and want to
order tickets to a lower price, please pay the right amount of money to our
Swedish postal giro account

nr 73 69 10 - 1

before the 31st of May 1996. Don't forget to state your name, address,
country, telephone, fax, email address and SAK membership nr so that we
know who's paying.

THE EXHIBITION

The exhibition will be open on the following times:

Friday 14th 12:00 -- 21:00
Saturday 15th 09:00 -- 21:00
Sunday 16th 09:00 -- 16:00

If you and your company or organisation wants to join the exhibition, then
estimate the space you need and pay the fee to us. We offer you different
sizes (measurements in Swedish meters) depending on your needs.

4,5 m2 costs 500 SEK
9,0 m2 costs 1000 SEK
18,0 m2 costs 2000 SEK

If you want more space, then every extra m2 is 150 SEK. Please contact us first to get further information.

The retailer's fee includes full entrance for two persons.

Nonprofit organisations can join the exhibition for free (with a space of 4,5 m2). This includes full entrance for one person.

Please pay at our Swedish postal giro account,

nr 73 69 10 - 1

before the 31st of May 1996.

State your company/organisation name, address, country, telephone, fax, email address, contact person and space needed. If you'd like to speak at a seminar about something, then tell us about it.

THE DEMONSTRATIONS

More will be added as soon as we get to know about them.

BBS We'll be showing STraight BBS, with products as Semper, LED, Octopus etc. Sysop Bertil Jagard will be answering questions and demonstrate different situations, as well as speaking about ethics and problems with communicating.

MagiC What is MagiC? What is multitasking? Find out by using MagiC 4, and swapping between those programs. Learn about problems and get tips from experienced users.

Making How can magazines be made with Calamus SL? We'll be showing how magazines the Swedish Atari Users' Association (Svenska Atariklubbens) with SL magazine "AtariMagasinet" is made. Tips, problems, features and possibility to make yourself some visit cards or other things to take home.

THE SEMINARS

More will be added as soon as we get to know about them.

Internet What is Internet and how can I use it with my Atari? Experienced administrators will be talking about Internet - history, how it's made, the future and more. We'll put it in reality too, with products for Atari computers that all of us can use - easy!

THE CONVENTION

NOTE: This is preliminary information. Updates will come.

Which computer? Atari in all forms. We want the hackers and the democoders. The Linux freaks. The MiNT people. The Jaguar nuts and everyone else that uses Atari in some form.

Demo contests

BIG ONE
No limit at all. Should be able to run on a Atari compatible computer
present on NAS96.

SMALL ONE
The limit is the shoesize squared (european) of the deliverer in bytes.

World cup in alfabutton

We will try to break the world record in typing a to z on a standard
keyboard. So far, way below two seconds. Go practise...

Films and demos

We will alternate between showing films and old demos on our big
screen projectors. Of course newer ones as well.

Prices

They will most certainly show up and be of good quality.
More info to come.

More information is available from larkov@tripnet.se, or visit NoCrew's
homepage at http://www.dd.chalmers.se/~f93labr/nocrew/index.html

FURTHER INFORMATION ABOUT NAS96

The best way to get new information is to join our NAS96 mailing-list.
Write to nas-users-request@tripnet.se and include the following in the
message text:

subscribe nas-users <your email address>

Our homepage is also informative to visit. It is at
http://www.tripnet.se/sak/nas and is updated whenever it is needed.

If you want more information about NAS96, then use any of the addresses or
telephone numbers below. Email is always the fastest way to get answers.

3596. SDX & XEP80

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-12 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <31bf82a5@pianosa.demon.co.uk>
Source record: 83129

Hello All,

Can anyone tell me where I can get hold of a *PAL* XEP90 driver, other than the Atari one?

The reason I ask is that the Atari one doesn't work under SpartaDOS X, and the SDX one is NTSC.

Thanks for any help.

I agree. Now if you want to talk trash, talk Trak (or was it Trac?).

What you need is a Basic Cartridge, part number CXL4002, you can do nothing with the note pad. The basic cartridge goes in the left slot as well as any other cartridge you come across that will fit the slot made for the Atari.

3599. Jay B's Video Game Auction #2 Update #5 (Part 1)

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-12 00:00:00 UTC
From: Jason Bonanno <jayb@worldnet.att.net>
Message-ID: <4plc29$i34@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 83202

Welcome to Jason B's Video Game Auction #2 (Part #1) (Update #5)

Attention: This auction is listed in two sections (Part 1 and Part 2). All e-mail and usenet updates will include both sections.

There are over 700 items for sale on this auction and I will be holding another contest for
the 1st, 2nd and 3rd place bidders. The prizes are all BRAND NEW in the box:

1st place...SONY PLAYSTATION/SEGA SATURN (winner's choice)
2nd place..SUPER NINTENDO/SEGA GENESIS (winner's choice)
3rd place...ATARI JAGUAR

Please note my new e-mail address: jayb@worldnet.att.net
Please send all bids to this address.

Please include your full name and address when you make your first bid so I can quickly give you your total with shipping at the end of the auction.

If for any reason you would like to be removed from my e-mail list, simply let me know and I will do so immediately.

Rules:

1. Send all bids to jayb@worldnet.att.net
2. All bids are in increments of $1.00, $.50 if an item is under $1.00.
3. This auction will end 6/30/96 at 12:00 A.M.
4. Any bids after 12:00 A.M. on 6/30/96 will not be accepted.
5. Contingency bids are accepted.
6. I will update at 8:00 P.M. everyday (except Saturdays). Via usenet and e-mail.
7. Payment will be in checks and money orders only (in U.S. dollars).
8. Please allow 7 days for personal checks to clear.
9. No group bids.
10. Please do not quote entire message in your reply.
11. Shipping will be by U.P.S. ground, unless it's only paper items which will be sent U.S.P.S.
12. Buyer pays all shipping charges.
13. International bidders welcome. (All international packeges will be shipped USPS)
14. I reserve the right to withdraw any item(s) from the auction.
15. Feel free to ask me any questions.

Condition Chart:

@@@@@@@@@@@@

Sounds like you have lost your zero track sensor, it is either 1 of two things..first..possible dirt in there causing it not to sense, or secondly it had burnt out..try cleaning it with something but be carefull not to break the post off the head that goes into the slot..

3601. Re: Good News, Bad News (help!)...

You might check out the power supply first perhaps it has bit the
dust, either too much too little? They read 11.5v but actually
put out in the range of 15v dc, which is fine..

You can locate an Atari 5200 power supply part no CO 18187
11.5vdc
1.95 amps which also will work fine..

Bob

3602. Re: Wanted: MIO to XE Connector

Newsgroup: comp.sys.atari.8bit

What you are looking for is the Card Edge connector, there is not
a cable that I am aware of for the XE to the MIO. Two people
have rights to them now..FTE has one if you can find him..I own
the rights to the other and have them in Stock. Price is $15.00
plus $4.00 s/h

Hey! You were pretty close! I opened it up to look at the sensor, and I
discovered that I actually have a sticky head transport! It get's very
stubborn out towards track 0, simulating the sensor problem you suggested.

Thanks!

Mark C. Lowe

Think again......

There WAS an 800XE planned (don't ask me why). I have a
flyer with a picture of this unit. Don't know why they
planned on bringing it out, but apparently it had similar
specs to the 65XE.

At least a few prototypes are known to exist.

3606. Re: use an 1029 dot matrix printer with a PC ?

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-13 00:00:00 UTC
From: david.moeser@ccc-bbs.com
Message-ID: <8C271B1.111C000AE7.uuout@ccc-bbs.com>
Source record: 83009

-> Is it possible to use my good old 1029 dot matrix printer
-> with my PC ?

The answer is yes, but you have to be an electronics expert to do it.
I know an electronics professor who tackled this kind of thing just for
the fun of it. "All these home computer components work on 5 volt
logic," he said. You need to take the pinouts of the printer and the
pinouts of the IBM and build a cable to match up the right pins with
each other.

Message-ID: <31c0d51b@pianosa.demon.co.uk>
Source record: 83011

Whilst reading the usual rubbish I find here, DAVID MOESER wrote something
interesting to All about getting started with a 800XE:

Hello DAVID,

DM> There is no such thing as an 800XE. You might have an 800XL, or a

Read the FAQ. There is/was such a beast. Same as 130XE, in everything except
RAM (64K). Sold in Eastern Europe, mainly.

(I LOVE to reply to my own msgs.)
I GOT IT!
I'm going to send the posters of huge auctions a copy of
'How to sell things on the usenet, how to do it, how not to do it'
This is a msg in news.annouce.newusers.
Basically it ways if you aren't a regular participant in a group,
don't try to sell things in the group, don't spam, etc. If you
really want to sell stuff, get a www page, etc.

3610. Jay B's VideoGame Auction #2 Update #6 (Part1)

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-13 00:00:00 UTC
From: Jason Bonanno <jayb@worldnet.att.net>
Message-ID: <4pnlqk$seo@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 83132

Welcome to Jason B's Video Game Auction #2 (Part #1) (Update #6)

Attention: This auction is listed in two sections (Part 1 and Part 2). All e-mail and usenet updates will include both sections.

There are over 700 items for sale on this auction and I will be holding another contest for
the 1st, 2nd and 3rd place bidders. The prizes are all BRAND NEW in the box:

1st place...SONY PLAYSTATION/SEGA SATURN (winner's choice)
2nd place..SUPER NINTENDO/SEGA GENESIS (winner's choice)
3rd place...ATARI JAGUAR

Please note my new e-mail address: jayb@worldnet.att.net
Please send all bids to this address.

Please include your full name and address when you make your first bid so I can quickly give you your total with shipping at the end of the auction.

If for any reason you would like to be removed from my e-mail list, simply let me know and I will do so immediately.

Rules:

1. Send all bids to jayb@worldnet.att.net
2. All bids are in increments of $1.00, $.50 if an item is under $1.00.
3. This auction will end 6/30/96 at 12:00 A.M.
4. Any bids after 12:00 A.M. on 6/30/96 will not be accepted.
5. Contingency bids are accepted.
6. I will update at 8:00 P.M. everyday (except Saturdays). Via usenet and e-mail.
7. Payment will be in checks and money orders only (in U.S. dollars).
8. Please allow 7 days for personal checks to clear.
9. No group bids.
10. Please do not quote entire message in your reply.
11. Shipping will be by U.P.S. ground, unless it's only paper items which will be sent U.S.P.S.
12. Buyer pays all shipping charges.
13. International bidders welcome. (All international packeges will be shipped USPS)
14. I reserve the right to withdraw any item(s) from the auction.
15. Feel free to ask me any questions.

Condition Chart:

@@@@@@@@@@@@
MT----------MINT
EX----------EXELLENT
VG---------VERY GOOD
GD---------GOOD
FR----------FAIR
PR----------POOR
@@@@@@@@@@@@

The condition chart listed above is only to be used as a guideline. I am not an "official " expert and my chart is just a general collector's opinion.

The Prizes: (This section will be updated daily)

1st Place-----------Playstation/Saturn----------$192.00---------rwagner32@

2nd Place----------SNES/Genesis--------------$174.50---------mfmurdock@
3rd
Place-----------Jaguar-------------------------$145.50---------emeral29@

All Items listed are tested and in working condition unless otherwise stated.
All Items are fully guaranteed, just contact me if there is a problem.

First Robt. Cortese:
I miss your dad, but this isn't a perfect usenet. Robt. Cortese says his dad, Rick, don't read csa8 any more or something. Robt. doesn't (or didn't) realize that Phillip Price has the rights to AR and has made them freeware, the author has granted permission to distribute AR freely (the A8 version.) PP don't want your money, Robt.! If dad is turned off by csa8 squabbling, discussion of 'piracy' and whining, well, ok, sorry, csa8 has actually been without too much of that stuff lately, until today's steeeenking auctions. These guys post updates twice a day too.

Second: STEEEEEEEEENKING AUCTIONS:

I just downloaded a huge 158k days worth of csa8. 104k or 2/3 was steeeeenking auctions. Now, I don't have time to mail bomb these people, but I sure would like to see these huge auctions off csa8. These auctions really detract from csa8 because many European users pay by the byte and can't afford toparticipate when there is all this crap. If anybody has any suggestions, like maybe I should put in phoney bids or something, let me know.

Russ Gilbert
now at a new address (an old address, actually)

Hey! How does your software quote the wrong person?

Anyway, what this proved to be was the step motor getting a bit ragged in one place. I removed it, put some 3-in-1 oil in there, and now it operates as good as new! Now the assembly operates smoothly in the Track 0 area again. It sounded like maybe some bearings in the motor were grinding. The oil fixed it right up... for now, at least. :-)

3614. JHV and Soft

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-13 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <4polc2$76d@widukind.worms.fh-rpl.de>
Source record: 83136

I wrote a little time ago about the Abbuc JHV 96 and some people are not sure what a great show means.
At the last ABBUC JHV have been 3-4 Trader KE-Soft, AMC-Soft, People from Pockey /ANG and the ABBUC. There were about 70 visitors at the show and 20-30 people who showed soft- and hardware. There have been many ABBUC Regional Groups.
IF you travel from the USA or England you could be disappointed, i wrote my review from the side of german Fair's. At the german shows are between 50-100 visitors. So please call the ABBUC for more informations or dial the ABBUC Mailbox.
If someone has thougth that there would be more than 100 persons at the german fairs its my fault.

Here are the names of some new (94/5) Games:
Sexversi
Rockman
others follow when i meet Kaisersoft.

Take a close look to The great Atari 8 Bit Resort from M. T.

3615. Question about 800xl

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-13 00:00:00 UTC
From: potsy11187@aol.com
Message-ID: <4podb0$b15@newsbf02.news.aol.com>
Source record: 83137

I recently bought a used 800xl.. .I have a few questions

How do you run basic ? I know it has it built in on ROM, what do you type at the ready prompt to get it? What are other things you can type at the ready prompt? (besides DOS)

Also, I have a 1050 disk drive, and i am having a problem. I'm pretty sure i have the disk head clean (the little white rectangle underneath that long plastic arm), but no matter what disk i try (DOS 2.5 or others) I always get a "BOOT ERROR" message in the blue screen... can someone help? Maybe a cable error?

Please respond to the newsgroups, thanks
Potsy

You may have the same problem I did with my MYDOS45.ATR that I tried
to use on XL-It it was a double density ATR and XL-it appears to only
do single. On SParta DOS get version 3.3a and it will work great on
Xformer or XLit

I recently picked up a ton of 800 computers and 800XL computers at an auction. I have checked each and everyone for any problems. All work great. I am selling the 800 computers with a basic cart for 8.00 each plus shipping. This does not include a power supply. I have a few of these but need them for disk drives I am also selling.

800XL systems include powersupply and are 18.00 each plus shipping.

810 disk drives I have a bunch of these also all checked and ready. I am asking 10.00 each for them plus shipping , 8.00 extra with powersupply

1050 disk drives I am asking 15.00 each for these plus shipping and 8.00 extra for power supply.

Track Disk drives I am asking 25.00 each for these plus shipping and 8.00 extra with powersupply. The Track drives are pretty neat. You can hook a printer up to them directly and they also have a 34 pin slave connector on them that you can hook up an external drive to. This can be another 5.25 or if you want you can hook up a 3.5 floppy external drive to them. You will need to find a DOS such as MyDOS or Sparta that allows you to enter the tracks and sectors though for formating.

All of the above have been checked and found working.

Well, assuming that the drive door is closed, a BOOT ERROR can be caused
by a flakey cable, a bad disk, or if your drive is out of alignment.

When you get the READY prompt, you are in Basic. You can also type BYE to
get the self test menu.

That *is* BASIC. The "READY" prompt is BASIC's signal to you to start
something. You can type in a program, or run one, or whatever.

>
> Also, I have a 1050 disk drive, and i am having a problem. I'm pretty

>
> Please respond to the newsgroups, thanks
> Potsy

You might try changing the drive number. On the back of the 1050 unit
is a little hole with two tabs in it (one white and one black). To
change the drive to be drive 1, you need to have both switches to one
side (I don't remember which, unfortunately). One of the switches is
behind the other.

Are the BOOT ERRORs really rapid? Or does just one error occur?

3631. Tennis.bin - XMO Files - and looking for 5 Games

Source record: 83153

I am reading this group for a few weeks now, and also got some FAQs but
I am not sure about 2 things:

I am using the PC Xformer and the XL-It emulator and could run most of
my games. But when I start Tennis.bin I only get the Intro-Screen.
Maybe someone has an Bootdisk Image?

I also found some facts about XMO Files, but I can't do anything with
those files. Is there a program to handle them (Sorry if this is already
answered in a FAQ File, but I have not found anything.

I am also looking for the Game-Files of those games, I only have them on
Casette:
Thrust, Super Breakout, Power down, Olympic Skier and the Football
Manager (of Addictive Software). Maybe someone has Atr's or something.

Peter

cybrchld (cybrchld@agetech.net) wrote:
: Can anyone tell me where I can get a list of the parts needed to build
: an SIO2PC cable single chip version .

: luis....:)

Here are the parts I used for the APE cable, which, I believe, is the same as the one chip SIO2PC cable. Somebody correct me if I'm wrong about that.

The chip:
1489 Quad Line Receiver
(Radio Shack Cat. No. 276-2521)

Signal Diode:
IN34A Germanium Diodes (pack of 10)
(Radio Shack Cat. NO. 276-1123)

The nice thing about having the catalog numbers is that the parts are numbered in order on the radio shack racks, I think.

One Atari SIO cable.

Either a 25 or 9 pin serial connector/cable, depending on what kind of serial port you have on your PC (make sure you check to see if you need a male or female version).

If you have a 25 pin connector, you might be able to fit the chip assembly inside the connector shield. If you have a 9 pin connector (like me), you might need to buy a plastic box (also available at Radio Shack) to put the assembly in. On the other hand, you might be able to attach a 25 pin connector to the end of your serial cable, put the chip assembly inside that, and then connect that to your serial port using a 25 pin to 9 pin adapter, but I'm not entirely sure if this would work; I used the box method. If you also are going to use the box method, buy some plastic grommets (also at RS, collection of assorted sizes) so that your cables will be safely secured inside the box. Also you'll have to drill two holes in the box for the cables. The RS boxes can take that without cracking, I've found :)

If you see READY on you screen you are at the Atari BASIC editor. You can write programs, RUN"D:BASICFIL.BAS", LOAD"D:BASICFIL.BAS" then RUN, ENTER"D:BASICFIL.LST" then RUN. LIST a program file that is already loaded.

If you are sure the disk you have really does have AtariDOS 2.5 on it, then place that disk into the drive. Be sure that the switches on the drive (in the back) are set for drive 1! and that the SIO cable is connected properly to the computer and drive. Turn on the drive and then the computer. It should make some noises on the monitor/TV speaker and the drive light should come on. The drive motor should be running and then you should see the READY prompt on the screen (XL/XE computers except 1200XL). 400, 800 and 1200XL will put you a the DOS Disk Utility Package menu screen if you don't have a BASIC cartridge installed in the cart. slot (left cart slot on 800).

If the speaker sounds like its burpping and you get and BOOT ERROR, then something is wrong with the connection to the disk drive or with the drive itself, or the disk does NOT have DOS on it (NOT a BOOT disk).

Actually, SpartaDOS is very different in its design from AtariDOS and MyDOS. It uses memory differently too. To use SpartaDOS 1.x -> 3.x you need an XL or XE with >=64KB RAM. SDX (cart.) could be used on any of the 8-bit Ataris (I haven't tried it on a 4K 400, but it might work there too.) It doesn't load into RAM to work. At least not the major part like the disk versions.

There is a gentleman working on a SpartaDOS image maker/file mover (DOS<=>image) utility. He's also working on the Amiga version of something very similar to PC Xformer (XL).

Anyway, SpartaDOS hasn't seemed to be conquered yet for emulator disk images. At least not that I know of. I hope someone does soon. I love SpartaDOS.

Now if I could only bet BASIC XE to be usable in PCXf. (sigh)

: Does anyone know how to change an 8bit Binary/Executable to a 8k/16k
: ROM file.

What about to a banked cartridge file? I know Rainbow supports banked carts.
What other emulators do?

Also, speaking of binary -> ROM.. would anyone consider building a
SuperCart for me with a copy of MyDOS 4.53/4 on it? :) That way I can
just PLUG in MyDOS, plug Action! on top of it, turn on my XL and go! :)

Oh! And maybe add a switch for when I need to boot real disks but don't
wanna wear out my cartridge port? :) >I'd< buy it! Rick Cortese?
Interested!? ;)

3641. COMPUTE! Game

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-14 00:00:00 UTC
From: Craig Henrichs <ralph@cts1.internetwis.com>
Message-ID: <31C12FF5.52BB@cts1.internetwis.com>
Source record: 83018

I have a 10/81 issue of "COMPUTE!", which has an article on an Atari Basic program which creates a Boot Tape game called "Shoot". I have an Atari 800 with 48k, and an Atari 810 disk drive, but don't have an Atari 410 tape drive. Since I don't have a tape drive, I can't type in the program.

Is there anyone who had transferred the game from a Boot Tape to a disk or Boot Disk? Or does anyone know how to change the basic program to create a Boot Disk file or a regular binary file?

If anyone has this game on a disk, could you send it to me? I'll pay for the postage. If no one has this game on disk, can I get a quote on an Atari 410 tape drive?

I would appreciate a reply.

Craig Henrichs

3642. another question about 800xl

Newsgroup: comp.sys.atari.8bit

Message-ID: <4pr6cm$9cv@newsbf02.news.aol.com>
Source record: 83019

i think you have to view this with the standard windows PS spaced font
I have my 1050 disk drive hooked up to my atari like this

the 'o''s are the two port in the back

i follow the procedure, i turn the computer off, turn on the disk drive, then put in the disk (and close the door/) then i turn the computer on... the disk drive whirss for about 5-7 seconds... then i see "boot error"... I have cleaned the drive head several times... I do not hear any abnormal noises in the drive (except those that are expected of the motor), and i have tried all disks i have... these were all in a basement for a couple of years... but i've even tried those in their boxes sealed in those little plastic notebooks that software used to have...

The guy said it worked last time he used it (the disk drive).. what's the best way to isolate the problem? i don't know if its the drive, or the disks... (i hope it is the latter).

Also, with the program APE, can i use a 5.25" ibm-pc drive with my atari (as an actual drive, not to copy disks with)?

please reply to the newsgroup,
Potsy

3643. Atari 850

Hi Atarians,

here is a short list of Polensoft from 94/5:

Cyborg by SikorSOft c 95
It's a very hard Puzzle Game. I can not say more because i
haven' t seen it.

Around the Planet by Mirage c 94
Flying around with a Heli. I don't know more about this game.

Fire Stone by SikorSoft c 95
It's a 100% ported Clone of the classic Boulder Dash with not
so big Levels. Funny

Sexy Six by SikorSoft c 95
A close to master mind but with 256 Color nude girls. Six girls
lose their clothes and more than 34 girls on 3 Data Disks are waiting
for you. Pictures are good looking "mmm" and the gameplay is as good
as the grephics.

Rockman by Mirage c 95
It's a great jump and run from Polen that rocks. Nice animation, good level
design and with good music/sfx. A lovely cute hero is waiting for your.
It will keep you playing on and on.

Starball by Mirage c 95
A game like OXYD on the ST... from Jakub Husak. Very hard and very well.

Crypts of Egypt by Mirage c 94
A game like Cavernia but not as good as the original.

Years ago, Compuserve used .XMO for any file that wasn't a plain ascii
text file. An XMO file could be anything: a Basic program, a binary load
file, a picture, an arc file... There was a program called WHATIS that
could identify most types of files.

Interesting. I have a disk of Koronis Rift, and a photocopy (?) of the "book," don't remember where they came from, but were probably "inherited" from someone's used-Atari-stuff collection that I bought somewhere, somewhen. I don't see (or at least don't remember seeing) anything about how to "save" the game. How is it done?

I also don't recall seeing much of anything "useful" about how to tell what the various artifacts were, or what they did. How is it that you guys can tell that a particular artifact "charges slowly," or "in a particular band," etc.? I don't remember ANY useful information on this sort of detail, from that photocopy... The doc was, as I recall, very open-ended...

Any detailed docs or summaries would be very appreciated!

You don't really know if it is the disk drive or a bunch of
messed up disks (less likely). So, what you need is another
disk drive to try the disks on. I suspect it is the disk
drive. Amer. Technavision has 1050 mechanisms for about
$19.95 or something.

I bought the cable from Software Support International in Vancouver, WA. SSI
only carries IBM, C64, and Amiga stuff. Their catalog says that the cable is
for a C64, but it's working ok with my Atari 800. The only problem is that
they want $12.95 for the cable plus $5.50 for shipping (that's the cost for
regular shipping not for over night shipping!)

(I don't know how complete this is, especially about 'bands' and
maps.)
KORONIS RIFT - Operations Manual

24 Febrius, 2249.

For three days your Scoutcraft has been travelling through empty
space, on its way from one foresaken part of the galaxy to another.
You're a technoscavenger, making a living searching for abandoned
technological systems - but for all the luck you've had in the last
month you might as well be an intergalactic drifter. Psytek, your
science droid analyzer, is monitoring the instruments. There isn't
much to do - not much, that is, until suddenly Psytek flashes an
urgent message:

POWERFUL RADIATION FLUX
DETECTED:
COORDINATES 45:90 RELATIVE
AZIMUTH AND ELEVATION
Powerful is right! Your instruments indicate rads in the ten thousand
range. "Any idea what it might be?" you ask.

NEGATIVE. CHARTS INDICATE
EMPTY SPACE FROM HERE TO STAR
SYSTEM 583
Strange. And stranger still, when you deploy the Scoutcraft's
optical sensor, you discover a large, solitary planet - one that
simply doesn't exist according to the charts. But there it is, it's
surface cut with deep chasms and ancient rifts.
You call up a dimensional coordinate grid of the radiation flux.
Sure enough, the lines of the grid are ruler straight until they reach
the area of the radiation flux. There, they become as warped and
tangled as the wiring of your third-hand Scoutcraft.
A powerful radiation flux...a planet cut with deep rifts...
Suddenly a wild idea occurs to you. Have you stumbled upon the
legendary Koronis Rift?
Seven hundred thousand years ago, the Ancients ruled the stars - a
confederation of over thirty different races whose technological
achievements were unsurpassed. According to legend, the Ancients used
the deep rifts of a planet called Koronis as a testing ground for
their most powerful weapons. Finding the fabled Koronis Rift has been
a dream of technoscavengers for centuries. Now, just maybe, you're the
one....
As soon as your ship moves within range, you activate your on-board
detector. Tuned to the Ancient's standard wavelength, it should tell

you whether this mysterious planet contains any caches of powerful technology.
Instantly, the detector registers the loudest alarm you've ever heard. Koronis Rift...it must be!
You signal Psytek. "Prepare the Surface Rover for descent."
Using the optical sensor, you snap an orbital photograph of a section of the planet's surface. A moment later Psytek announces:

SURFACE ROVER READY FOR DESCENT.
"What about the Repo-Tech Robot?" you ask.

RT ROBOT EQUIPPED AND ON BOARD.
The Scoutcraft, with Psytek in control, will orbit while you explore the planet in your Surface Rover. You can always summon Psytek to come pick you up at any time - as long as you're in the clear and not under attack.
There's no time to lose. Koronis Rift, the greatest treasure trove of technology in the galaxy, is waiting....

QUICK START

1. Launch Scoutcraft
Once your disk boots up, you'll find yourself inside the Surface Rover, ready to explore the planet Koronis. To start scavenging, press the fire button on your joystick.
2. Koronis Rift
The planet Koronis is cut by deep valleys, called rifts, which are ringed by mountain ranges and sprinkled with hills. You land in Rift One which looks to be the least dangerous.
3. Hulks
The vehicle you see on the ground before you is just what you've been hoping to find - an abandoned hulk, a war machine of the Ancients.
4. Video Displays
Check out the video displays at the top of you're screen. To the far left, the circle with a glowing dot at the top is your directional display. The glowing dot points toward the nearest hulk, directly in front of you.
5. Search
To search the rest of Koronis Rift for Ancient technology, just turn your ship until the dot is at the top of the display, and then move forward.
6. Drive
To turn on forward drive, just push the joystick forward. To turn off forward drive, pull it back. Push the joystick left or right to turn in those directions. Simple.
7. Guardian Saucers
Those are Guardian Saucers swooping in. They are out to destroy you. New waves will keep coming until you destroy their base on Rift 20. You've got only two choices - to evade, or to destroy them. To fight back, use your joystick to position your targeting cursor - the small cross hair that moves within the viewing window. With the cursor

centered on an enemy saucer, push the button on the joystick. One hit may not be enough. After all, these Guardian saucers will stop at nothing to protect the hulks of Ancient technology. And that's exactly what you're after.
8. Looting Hulks
The radiation levels on Koronis are enough to fry a Dromodite. So you'll have to send your Repo-Tech Robot out to loot the hulks you find. But you can't do anything, until you've destroyed all the attacking saucers and positioned your Rover next to the hulk. Then you'll see the options "LOOT HULK" and "CALL SHIP" appear beneath your viewing window. To enter the option area, move the cursor to the bottom of the viewing window andpress the button. Move the cursor to the right until the indicator light above "LOOT HULK" comes on. To issue the command to your RT Robot, press the button on your joystick. The RT Robot will bring back any useful systems it finds in the hulk. To return to the Scoutcraft, activate the indicator light above "CALL SHIP" and press the button on your joystick.
9. Final Objective
Destroy the saucer base on Rift 20 by gradually increasing your capabilities on the earlier levels. You can end the game anytime by returning to your Scoutcraft to cash in on all the technology you've found, but you cannot claim the entire planet for yourself unless you destroy the Guardian Base.
10. Pause and Restart
Press the SPACE BAR to pause the game. Press it again to resume. To reset the game press ESC.

SYSTEM ICONS
The following lists standard military systems of the Ancients, along with symbols commonly used to identify them. Other types exist that have not yet been identified.

LASER - Chromoquantized laser, capable of emitting a beam of destructive energy in a single color frequency.
SHIELD - Chromoquantized shield, capable of defending against energy weapons of various colors.
GENERATOR - comprising stand power supply.
POWER RESERVE - a high capacity energy storage device.
RADAR - Remote sensing device, designed to locate a specific type or class of objects. May also serve as compass or direction finder.
ECM - Electronic countermeasure device, capable of interfering with enemy detection gear and rendering the user harder to detect.
DRIVE - Propulsion module, for augmenting or changing the ability of the Rover to move over terrain.

***** * * * ** * * * ***** ** ** **
******* **** ** ** ** ****** *** ** ** *

```
* **** * * * * **** *
POWER **
LASER SHIELD GENERATOR RESERVE RADAR ECM DRIVE
```

STRATEGY AND TACTICS

Add a new module to an empty slot by selecting the slot and hitting the fire button. Use the "Add Module" option only to replace existing modules.
Some strategies will score more points than others. For high points, either try to bring back lots of modules for dismantling, or try to gather enough powerful waepons quickly, then get to Rift 20 and destroy the Guardian base.
Most radar modules point only to hulks made by the same race. If you first figure out what kind of modules an Ancient race is good at, then you can use radars made by that race to tell you if and where you may find more of those modules. Save the radars of useful races with Psytek for use on later rifts.
Mapping the rifts will help you from game to game. Some modules will help you in making maps.
Pay careful attention to energy flow. Powerful modules may require more energy than you can afford. If you add stronger shields and lasers to your Rover, you'll need to get stronger generators and power reserves too.
Unusual modules may work only on certain colored saucers, or for limited amounts of time. Pay attention and experiment. You may find improved versions in later rifts.
Note the progression of colors in the saucer weapons and shields. Once you recognize the pattern, you can plan ahead by having the modules you'll need to defeat or evade the saucers coming up.
Differently shaped saucers have different attack patterns. Adapt your attacks to their patterns.
Cutting through passes and staying near mountains can throw saucers off their pursuit, particularly if you have a good generator and drive.

Hello Craig,
I am sure that I will be showing my age on this answer, but I have that SHOOT program you asked about. I actually typed that in myself and it was the first binary load game that I ever had for my old Atari 800. Yes, it was meant to be loaded in from a BOOT CASSETTE. But, I still have a headache just remembering how much effort that was to type it in.
A few years later I bought a utility to convert binary loaded cassette files into binary load disk files (Atari only).
I found that game on one of my first Atari game disks. I will send the file to you by e-mail. It is less than 2K of programming. If anyone else is curious to see this early game, I will send it to you by private e-mail.

Happy Computing, from Doug Feldman in Ann Arbor, MI

3663. WTB: XC-11 or XC-12 Tape Drive

Hi,

Looking for tape drives from the same era as the XE-series computers.
I believe there were 2 of them; the XC-11 and the XC-12. If you have one
of these in good condition that you'd like to sell, or know where I
can get one, please e-mail me at: produnl2@teleport.com

Thanks,

You need APE, an SIO2PC Cable, and an Atari.
If you are trying to use an emulator, you are out of luck. They do not
support PRO format, which is a format wherein a PC can emulate the
copy protection on a disk, enabling you to archive your protected
software.
I'm curious: what did you download, and from where? I have at most
seen maybe 6 PRO images, most are regular ATR's (already cracked, to
be used with emulators, or regular ataris)
The link to ape is:
http://seka.nacs.net/~classics/
The link to my archive is:
http://mars.superlink.net/scharles
If you want the PRO's cracked to regular ATR's (so you can use them
with emulators) Let me know. I might already have them.

>I need to find out what program uses the .PRO extender. I have

APE (an SIO peripheral emulation program) uses this format to
represent copy-protected disk images. To run them you'll need a real
8-bit connected to your PC by an sio2pc cable.

Hello all,

Rainbow version 1.2 (Atari 8-bit emulator for the Apple Mac) is now ready.

See

http://www.cityscape.co.uk/users/jx91/emulators.html

for more details.

New features include 130XE (128K RAM) and 5200 console emulation as
well some important graphics improvements. Powerbook users will also
benefit from this update in terms of keyboard layout.

Regards,

Chris Lam,
Rainbow Keeper.

3668. Looking for Atari 7800 digital signature algorithm

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-14 00:00:00 UTC
From: btomlin@crl.com
Message-ID: <4pt626$olc@crl14.crl.com>
Source record: 83045

I'm looking for the digital signature algorithm needed to make usable Atari 7800 cartridges. I've heard a version of it ran on the Atari ST.

I have reverse-engineered the digital signature verification inside the Atari 7800 itself, and it looks like one of those wonderful "product of two primes" algorithms... with a 960-bit key!

If anyone knows anything, I would be very interested in either the prime factors or a uuencoded copy of the program itself from which I can extract them, so that I can make a program to generate the signature for any given cartridge image.

I already have the 7800 side of the algorithm implemented in Turbo Pascal (check out rec.games.video.classic if you want to see it), and it would be easy to add the signature generator... IF I had the prime factors.

It took until around '85, when the Amiga came out. =) (which is
no suprise, since the guy who made the cool graphics chips for the 800
(Jay Miner) also worked on the Amiga's.)

Of course today all of this is moot, since we're primarily back
to bit banging to get decent graphics.

------------------------------------------------------------------------
SWEDISH ATARI USERS' ASSOCIATION (Svenska Atariklubben)
IN COOPERATION WITH NoCrew PRESENTS

-* THE NORDIC ATARI SHOW AND CONVENTION 1996 *-

WITH CONVENTION, EXHIBITION, SEMINARS,
DEMONSTRATIONS, CONTESTS ... AND MORE!

AT KORTEDALA GYMNASIUM IN GOTHENBURG, SWEDEN
ON THE 14th, 15th and 16th OF JUNE
------------------------------------------------------------------------
NOTE: The information in this text is not complete! Updates will come.

PRESENTATION

NAS was first arranged in 1995. It's a special show with a hacker convent,
exhibition and different seminars - all in one place.

This time the Nordic Atari Show is held in a school building, Kortedala
Gymnasium, in Gothenburg. It offers several small rooms for the hacker
contests and seminars, a big lecture hall for showing demos and films and a
normal size restaurant for the exhibition. Showers and dressing rooms are
available, and there is free carparking in the school area.

Pizza restaurant, cafe and other shops are only a few steps away from the
school. If you want to stay at a hotel please contact us for information
or visit our Webpage for details (http://www.tripnet.se/sak/nas).

Kortedala Gymnasium is fifteen to twenty minutes away from the central part
of Gothenburg. There are good possibilities for communications by tram or
car.

The dates are the 14th, 15th and 16th of June. Gather with your friends and
join us at a very fun and exciting show for Atari users around the northern
and european part of the world!

This year the exhibition and seminars are arranged by the Swedish Atari
Users' Association (Svenska Atariklubben), and the hacker convent by
NoCrew.

Below are all the activities, and the low entrance prices. Last year they
were a little bit high, but this year we hope it's suitable for all
wallets!

THE ACTIVITIES

For more detailed information see below.
```

exhibition
retailers and different associations will be there

hacker convent
competitions for FALCON, STE, ST and 8-bit

demonstrations
Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars
about programming, Internet, multitasking etc

others
competitions for the non-programming experienced
(lottery, MidiMaze-contest, harddisk throwing, CocaCola-drinking etc)

THE PRICES

type payment SAK-member non-member

3-day entry prepaid SEK 100 SEK 125
3-day entry at the door SEK 125 SEK 150
1-day entry at the door SEK 50 SEK 75

The T-shirt is gasping yellow with a fine black print. Highest quality.
Don't miss this fantastic offer. Limited quantity.

T-shirt prepaid SEK 75 SEK 90
T-shirt at the door SEK 100 SEK 120

A cafeteria with low prices on CocaCola, Jolt, sandwiches, buns and
other tasty products will of course be available.

If you live in Sweden, you can order your tickets to NAS96 via
our Webpage at http://www.tripnet.se/sak/nas

Otherwise, if you live outside Sweden or don't have WWW access, and want to
order tickets to a lower price, please pay the right amount of money to our
Swedish postal giro account

nr 73 69 10 - 1

before the 31st of May 1996. Don't forget to state your name, address,
country, telephone, fax, email address and SAK membership nr so that we
know who's paying.

THE EXHIBITION

The exhibition will be open on the following times:

Friday 14th 12:00 -- 21:00
Saturday 15th 09:00 -- 21:00
Sunday 16th 09:00 -- 16:00

If you and your company or organisation wants to join the exhibition, then
estimate the space you need and pay the fee to us. We offer you different
sizes (measurements in Swedish meters) depending on your needs.

4,5 m2 costs 500 SEK
9,0 m2 costs 1000 SEK
18,0 m2 costs 2000 SEK

If you want more space, then every extra m2 is 150 SEK. Please contact us first to get further information.

The retailer's fee includes full entrance for two persons.

Nonprofit organisations can join the exhibition for free (with a space of 4,5 m2). This includes full entrance for one person.

Please pay at our Swedish postal giro account,

nr 73 69 10 - 1

before the 31st of May 1996.

State your company/organisation name, address, country, telephone, fax, email address, contact person and space needed. If you'd like to speak at a seminar about something, then tell us about it.

THE DEMONSTRATIONS

More will be added as soon as we get to know about them.

BBS We'll be showing STraight BBS, with products as Semper, LED, Octopus etc. Sysop Bertil Jagard will be answering questions and demonstrate different situations, as well as speaking about ethics and problems with communicating.

MagiC What is MagiC? What is multitasking? Find out by using MagiC 4, and swapping between those programs. Learn about problems and get tips from experienced users.

Making How can magazines be made with Calamus SL? We'll be showing how magazines the Swedish Atari Users' Association (Svenska Atariklubbens) with SL magazine "AtariMagasinet" is made. Tips, problems, features and possibility to make yourself some visit cards or other things to take home.

THE SEMINARS

More will be added as soon as we get to know about them.

Internet What is Internet and how can I use it with my Atari? Experienced administrators will be talking about Internet - history, how it's made, the future and more. We'll put it in reality too, with products for Atari computers that all of us can use - easy!

THE CONVENTION

NOTE: This is preliminary information. Updates will come.

Which computer? Atari in all forms. We want the hackers and the democoders. The Linux freaks. The MiNT people. The Jaguar nuts and everyone else that uses Atari in some form.

Demo contests

BIG ONE
No limit at all. Should be able to run on a Atari compatible computer
present on NAS96.

SMALL ONE
The limit is the shoesize squared (european) of the deliverer in bytes.

World cup in alfabutton

We will try to break the world record in typing a to z on a standard
keyboard. So far, way below two seconds. Go practise...

Films and demos

We will alternate between showing films and old demos on our big
screen projectors. Of course newer ones as well.

Prices

They will most certainly show up and be of good quality.
More info to come.

More information is available from larkov@tripnet.se, or visit NoCrew's
homepage at http://www.dd.chalmers.se/~f93labr/nocrew/index.html

FURTHER INFORMATION ABOUT NAS96

Yes. If you have a shell account where all the client software is
executed at their end, all you need is a comms program.

That's a bit unfair, why should someone assume a product exists if
he's never heard of such a product? I made the same mistake. In all my years
of using the Atari 8-bit line, reading the mags, and product catalog, I've
never seen any reference of an 800XE. So naturally I am going to assume it
was a typo.

BTW I have heard of the 260ST, an Atari computer that was only
sold in Europe, I've also heard of Amstrad, MSX, BBC, Sinclair Spectrum and
other computers that are almost non-existant in the U.S.

I've never heard of an Atari 400XLD w/ built in disk drive, should I just
assume that Atari made those and only sold them abroad?

Yes, I guess it is typically Canadian to be critical of Americans. No
flame intended. It is frequent that Canadians encounter Americans who
know absolutely nothing about what is outside their borders. While we do
not claim to know everything about the USA, I think it is safe to say we
know a fair bit about your country, and others.

At any rate, this is not a forum for a discussion of this nature, so I
will say no more.....except I have noticed when Americans parody
Canadians they always seem to put the "Eh" in the wrong place! (I guess
that is how we know we are being parodied) :-)

Yes, it can and is done all the time. You will need a 80 colum
terminal program that emulates VT100. ICET is one and FLICKERTERM
is the other I know of. Both are Shareware. It's best to use these both
with a Moncrome monitor. A 'Unix text-based connection' is known as
a 'Shell account'. Connect and sign on and Go.

Have fun; Rich Mier

Hi folks!
I am an old ATARI user. I have a 800xl + 1050 diskdrive + 1010 + 1027
printer.
I have a problem with my printers control card (with the components).
I think a component which is on the printed circuit card of the
1027 printer has damaged. IT has 11 legs and it is green.
Can someone identify that component(What is it and what is it for)
And also where can i find a new one if it is possible.
Thanks
See you later.
My email adress is kutlu@boun.edu.tr

Try a different SIO cable. cables do go bad. Only one wire out of the 15 in the cable could be bad and cause this problem.

I own and still use mine, but at this point, you'd probably be better
off buying a new CSS Black Box. Bob Puff still makes, supports and
sells them. The MI/O has only one advantage over the BB and that is the
memory that can be used as a ramdisk and/or printer buffer. The BB has
many advantages over the MI/O though. One being that they are much more
stable, another is that they are fully supported by CSS! There are even
more advantages, like parallel floppy drive interface, wider range of
hard drive support, special utilities, full concurrent modem/ disk I/O
and much more.

From: chase@positron.rutgers.edu
Message-ID: <4pvbne$gr1@positron.rutgers.edu>
Source record: 83062

I'm getting ready to move again, and am clearing out my closets of
assorted miscellany. Most of my Atari 8bit stuff is at my parents
house in MA, but I found a few items here (NJ) that could use a new home.

* De Re Atari - by Chris Crawford (looseleaf pages, no binder though)
* Antic Magazines (Nov83,Jan86,Feb86,Dec86,Feb88,Mar88 in variable condition)
* Axiom AT-846 Parallel Printer interface

The following stuff at my parents house I can also part with,
but shipping the stuff may take some time to arrange.

* Dead 1050 drive (parts?) (not immediately available)
* Percom DS/DD controller board (not immediately available)
* 1 Full Height Drive Mechanism (not immediately available)
* Vic-20 + DataCassette player (not immediately available, no P/S)

Anyone want this stuff? Make me an offer. Give this stuff a good home.

-> >Isn't that an oxymoron?
->
-> I don't know... I've owned these two Indus GT drives since 1984 or
so, and
-> they've never given me any trouble. I've loved them!
-
-I agree. Now if you want to talk trash, talk Trak (or was it Trac?).

Actually, of the 3 trak drives we had, all of them worked great.
Except the one that my friend put the power supply cord into the
printer port. (bonehead move)
At any rate, now my pc emulates the 1050 now, so moot points. (But my
1050 still works)

If he can't find a working MIO and can locate one that doesn't work for a decent price, I can repair it.

If he is looking for a new hard drive interface inexpensively then I can supply that. I have the KPI-Hard Drive interface for the Atari 8bit, will handle (ROM) controled at this point, MFM hard drives, drive 1 is a fake floppy, drive 2 is an actual external disk drive, drive 3-8 are hard drive partitions consisting of at least 65535 bytes provide the drive can handle them..in other words 5mg through ??..price for this interface $100.00, plus s/h...will set the rom up for the drive you plan on using..(It is the old Supra Hard Drive Interface) for those that are familiar with Supra...

I also bought the rights to the 130XL, cart port to paralel buss to connect the MIO ect to the 130XL..these are still avaiable for $15.00 plus $4.00 s/h within the U.S.A. Canada and Europe add $3.00 U.S. for S/H..

From: BobKlaas <bobkla19@mail.tcd.net>
Message-ID: <4q05du$ber@news.tcd.net>
Source record: 83081

It is highly unlikely that all of your Atari 8bit disks have gone bad, but not an imposibility..it is also possible that your disk drive has gone out of alignment.

I know there are a couple of programs arround that will let you select sectors to read..find one of these and check sector 0, 16, and 39, or 38..is also ok..you already have the lid off the drive so, find the stepper motor..big round thing that controls the head. Loosen the 2 screws securing it..this is after you have checked a disk with the program..you should hear read beeps at one of the tracks I stated above...go for 0 or 16..use the track read program first on 0, if it beeps ok..then try 16 if it doesn't you problem lies here..loosen the screws on the stepper motor and move it slightly to the right if the beeps come in move it to the outer edge where they dissappear, then back the other way to where they dissapear..then move it to halfway where they are solid..lock down the screws here..and try to boot the disk.if it fails try another good disk??

One of the best disks for manual allignment is Flight Simulator II, it has protection on all tracks up to 38..if your drive will boot this disk it doesn't need aligned..(Rana Disk Drives, only a very few will be able to boot this disk due to the nature of the drive!!!!) This works for the 810, 1050, Trak, Percom, and Indus..

Hope this helps, if not..I can fix your drive..

Bob

3705. Users group in Cleveland?

3706. Re: Good News, Bad News (help!)...

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-16 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <p9INkqU.lmcclure@delphi.com>
Source record: 83083

In a message dated 6-8-96, Vincent Hase said:
|
| Darn it, it was such a nice drive. Double density,
| two ports in the back to allow daisy-chained drives
| (or the cassette recorder) without an interface. LED
| track display, write-protect button. Switch from single
| to double with the press of a button (gotta stop now,
| getting all misty-eyed again)....
|
|
Even though it might not be economical to pay for it being repaired,
I hope you post it for sale before consigning it to the trash bin.
Another person might be able to repair it, or at least use it for spare
parts for their own Indus, or for experimentation.
|
|
|
| BTW, will I need the interface if I use more than one
| Atari drive (or, worse yet, with the first one)?
|
No. With standard Atari drives, you just plug them into the SIO daisy
chain style, and set the device number (using the switches on the back)
to different device numbers.

Just a FEW of the ME#1 CD-ROM's features are:
- 460+ pics of Cindy Crawford ** FOREIGN ORDERS: **
- 200+ pics of Elle Macpherson --WELCOME--
- 200+ pics of Alicia Silverstone
- 200+ pics of Mariah Carey
- 200+ pics of Christina Applegate (Kelly Bundy) **NUDES**
- 200+ pics of Sandra Bullock
- 100+ pics of PAMELA ANDERSON aka Pamela Lee!!
- 100+ pics of Patricia Ford (sexy hot famous model)
- 50+ pics of Elizabeth Berkley (Showgirls star)
- 50+ pics of Christie Turlington (hot supermodel)
- 50+ pics of Jenny McCarthy (singled out host, playmate)
- 70+ pics of Singer Paula Abdul
- 60+ pics of Alyssa Milano, nude and clothed..!
- 40+ pics of Sarah aka Jennifer Love Hewitt **BBS READY**
- 40+ pics of Jennifer Aniston from FRIENDS
- 80+ pics of Racquel Darrian / Kelly Jackson (porn star)
- 80+ pics of Anna Nicole Smith
- 150+ pics of Adult Japanamation/Erotic Artwork
- 2000+ pics of other nude stars (too many to list!)
- 2000+ pics of clothed MISC (swimsuit etc) stars
- 1500+ pics of hot AMATEUR models, nude..
(MORE details on content at http://www.mid-night.com/cds.htm)
or call 804-686-1271 to order via phone.

Common info:
* Packed in white shipper, No signs of nudity (Wife protection plan)
* All in all, there are over 8,000 thats EIGHT THOUSAND FILES!
* All pics are high quality atleast 640x480!
* Directories are arranged in NUDE/NON NUDE ordering for easy use!
* MPEG Animations of Stars (Applegate, Salma Hayek etc..)
* Graphics viewing software for Windows/DOS
* CD is BBS ready with detailed descriptions of all files!
* This CD will save you -ALOT- of download/searching TIME!

* Too many more features to list in this message..

This CD represents alot of hard work. Here is the pricing:
$24 each (plus $2 shipping, $5 shipping outside USA)

*For FAST results, visit http://www.mid-night.com/cds.htm
And fill out a order there. We take every method of payment.

*Or call 804-686-1271 to order via credit card over the phone!

*If you dont have access to the World Wide Web and would like an ORDER FORM
sent to you via email, reply to this message at cds@mid-night.com
If you have any questions feel free to email also..

*If you dont trust the internet for ordering, you may logon
Midnight Escape BBS at 804-686-3062 hit C at the new user menu
to order the CD..

Qualifications: You must be OVER 18 & live somewhere on planet EARTH!
NOTICE: Foreign orders add $5 for shipping..

*Wholesale/Dealer/Bulk information/prices available upon request.

I bought an XE a while back that came with a mini joystick connected directly to the top of the cover of the machine. It was just a small plstic unit with a mini joystick and one little button.

Does anybody have a source on these? I'd like to get a few more.

Oh, and for all of you that have been corresponding with me via snail mail (packages, tc..), my new address is now:

James King
4096 West Yorkshire Drive
South Jordan, Utah 84095

(Just bought a rather large 5bedroom, 3bathroom house)

>appreciated.

> Luis.....:)

.bin format is usually an executable binary file. Occasionally it is a
binary picture file that can only be used with a graphic application.
It is not a disk image like XFD or ATR. To convert it we need to know what
equipment you are using. SIO2PC? Xformer? APE?
Files with an EXE, COM or BIN extension are all the same. Sometimes the OBJ
extension is also used, but an OBJ extension is not necessarily an
executable one.

If it is one of the 850 interfaces with the black metal case, then it's
more of a collector's item than the tan plastic case one.

It's a "IconTroller" made by Suncom for the Commodore and
Atari. I'm looking at the box mine came in about 8 years ago. The
Address given on it is:
Suncom
260 Holbrook Dr.
Wheeling, IL. 60090

Can't find any phone number and don't know if they are in
business anymore or not. Ohhh, modle number is "ICN108"
They also made a mouse that would work with the Atari when
in 'Joystick' mode. Have one of those around here someplace too. (Not
for saile.)

From: jvogel@crl.com
Message-ID: <4q2600$pl2@crl7.crl.com>
Source record: 83092

Looking for anyone's opinions of their favorite under-rated games; you know, not Jaggi Lines or Ball Blaster or Missile Command, etc. Looking through some of the gamesnnn.atr collection on one of the software sites, I've found that there was a *lot* of crap that was made, but from my memories there were a few priceless gems out there.

Here's a partial list of some of my favorites:

Ali Baba and the Forty Thieves (can't remember the author's name).
Sixgun Shootout (SSI)
Gauntlet (freeware, Donald Lebeau)
Retrofire (Analog Magazine type-in orbital landing simulation)
Paperweight 3.1 (The Atari self-destruct prank :)
Some Atari vs. Apple vs. Commodore demo whose name I can't recall

Anyone have their own favorites? List them here :)

John

My favorite non-blockbuster games, off the top of my head, are:

Decision in the Desert (MicroProse)
Wizard's Crown (SSI)
Fortress (Rapid Fire)
Diamond Mine (Roklan)
Aliens (John Palevich)

> Here's a partial list of some of my favorites:

Source record: 83096

```
S | From: scharles@superlink.net (Yogi)
S | Date: Sun, 09 Jun 1996 09:47:27 GMT
S |
S | What I meant was that I never was able to buy an Indus drive that
S | didnt get CONSTANT G4 Read errors- I had three of them then I
S | learned better and stuck with 1050 happies for my DD use...

I have to take issue with that. For over 12 years as an active
Indus user I've used half a dozen Indus drives (some currently
in use; others now in storage) and have hardly ever encountered a G4
error. The Indus was very sensitive. When they worked, they worked
for many years without any problems; but when they were flakey, it
usually showed up right at the beginning. Based on the experience
of a local dealer back in the '80s when the Indus company was still
in business, 15% to 20% went bad within the warranty period and
were returned to the company. They're either dependable or flakey;
there's no in-between. Same goes for users: they're either
Indus-lovers or Indus-haters. My Indus experience has been
excellent and I rate the Indus (and DD) as an important factor in
making it practical for me to have remained an 8-bitter for so long.

Pastfinder by Activision is soooooo good!

That's the main game that keeps me coming back to my 8-bit...outstading.

Came out kinda late in the machine's cycle, as I recall, so not a big
release, but I thinks it rocks.

3723. `Exhausted' 1050 ...

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-17 00:00:00 UTC
From: pih100@york.ac.uk
Message-ID: <4q2h2d$f68@netty.york.ac.uk>
Source record: 82957

Hi folks. Dug out my 800XL and 1050 over Easter time. Wonderful stuff, except my 1050 is virtually lifeless.
The red power led comes on, but there are no other signs of life.

Odd thing is that I was totally unable to read a voltage across the output from the transformer plug. Nor any voltage across the three wires going in to the 1050 from the power socket. Yet something must be, since the light is coming on. Tried various other power supplies with the same output (none of them powerful enough to drive the 1050 though) and they gave very clear voltage readings - both from the pin, across the three hard wires in to the drive itself.

I'm not sure where the problem lays. The transformer had been connected almost all the time for 9 years, until I packed everything away 2 years ago (when the loathsome x86 based machine became too good to avoid).

Could this be transformer trouble? I cannot figure out why there is no net voltage anywhere I can measure, and yet the light comes on, and the drive gets quite warm. Could my 1050 be being powered by nostalgia? ;)

I'd be grateful if anyone could suggest where the problem is, and/or how I might go about diagnosing it.
Else I'm going to be forced to have to buy another 1050 {the old one shall be put in a glass case. ;}

Thanks for any help.

Paul.

3724. COPY2PC questions

Date: 1996-06-17 00:00:00 UTC
From: mldcs@anet-dfw.com
Message-ID: <4q2v21$e21@news.anet-dfw.com>
Source record: 82958

Ok... I finally built my SIO2PC cable today. I hook everything up and all I get is one little "KERCHING" of data exchange and the system hangs there. I am attempting to boot from the PC. What the status line shows is Command:S Last:R Device:31 Err:f Sector: 2

R & S above may be backwards. I have shut everything off already. It seems like it wants to work, but stops after a minor bit of chatter. Is there a file that describes the meaning of the status line results? Error codes, etc.???

Any suggestions?

Incidently, I'm using the circuit that has a single 1489 chip, and I have about twenty feet of four-wire twisted-pair going to the PC.

Thanks...

yar! Death of An Apple! i have that somewhere.. I laugh at it every time..

Hacker (Electronic Arts) is one fav.. haven't been able to finish it yet
HitchHiker's Guide To The Galaxy is kick ass...
Megablast I has to be THE best never heard of game out there.. digitized
music routines stolen from Amiga and VERY addictive!
Arkanoids is always fun..
and I've recently been getting into playing Tetris.. Ataritris, to be exact.

3727. Old computers magazine!

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-17 00:00:00 UTC
From: historical@aol.com
Message-ID: <4q39qb$t5p@newsbf02.news.aol.com>
Source record: 82961

Some people collect stamps, baseball cards, dolls and even cars -
but, did you know that there is a group for people who collect computers!
The Historical Computer Society is an international user group for old
computer enthusiasts ("old computers" and/or "old enthusiasts"). Issue #9
of "Historically Brewed" is now out and shipping! Our biggest and I think
overall best issue yet. It contains an exclusive interview with Ed
Roberts, creator of the MITS Altair computer! Also, the final installment
of the excellent DEC pdp-8 history. "The Internet and Computer History",
"For the Collector", "Remembering Gary Kildall", Collecting home and
arcade video machines, letters, member stories, comics and more!
The Society is dedicated to preserving older and classic computer
hardware, software and literature while educating and helping it's members
as well as the general public. The Society and it's magazine were started
in the pioneering spirit of the early computer clubs. One of the most
famous groups was the Homebrew Computer Club from the San Francisco Bay
area started in March of 1975. No other single organization helped to
spawn more of today's computer legends than did Homebrew. This is why the
name "Historically Brewed" was chosen for the magazine.
Computer history nostalgia is now available to all buffs of "antique"
computing everywhere. Many people have fond memories of their early
computing days. Never has another device evolved so rapidly as to produce
nostalgic artifacts in less than a quarter of a century! "Historically
Brewed" is a forum for these people to meet and share their stories.
The Historical Computer Society intends to become the authority in
the community of retired personal computers. Hundreds of old computers are
thrown out everyday by Americans as junk, but HCS believes that these
outmoded machines have value. HCS can help owners find answers about
system operation, peripherals, software, books, magazines and service.
"Historically Brewed" is ready to become the premier circular for
information, classifieds and trading of outdated equipment, etc. New
subscriptions in the U.S. are only $14 a year or try an issue for only $3;
subscriptions in Canada are $16 and $20 international. HB is sold at The
Computer Museum in Boston, the American Computer Museum in Bozeman,
Montana and at Smithsonian Book Stores, Washington, DC. HCS, 3649 Herschel
Street, Jacksonville, FL 32205. Best, David Greelish, President, HCS

I wrote some time ago and which I have put on the Web.
It's copyrighted under the GNU public license.

For those who do not already know about it, please see the info at
the end of this text.

The new stuff in this version is:

Fully tested and ported C64 version available!!!

The C64 port means, that the whole stuff has successfully been ported
to a computer without MMU (which the originating CS/A Computer had),
including making all the stuff 'thread-safe'.

The C64 port will also surely give a good base for other ports to common
6502-based computers without MMU, namely the apple][and some Atari 8-bit
machines. But I don't have any of these machines any actually I don't have
the time. But if any of you wants to do this, feel free to do so.
Finding the '#ifdef C64' should be a good start to see what is
C64 specific and what needs to be changed for other systems
(have a look at oa1/oa1si.a65, oafs/fsiec.a65, oadev/oa1dt.a65).

You find it at the usual place: http://www.tu-chemnitz.de/~fachat/csa/

From the old announcement:

OS/A65

This is the announcement of "OS/A65", a 6502 CPU operating system
I wrote some time ago and which I now put on the Web. It is
copyrighted under the GNU public license.

Some of its features are:

- preemptive multitasking/multithreading

- (kind of) microkernel design

- filesystems for PC FAT disks and CBM floppy drives on a IEEE488 interface
or CBM serial IEC bus

- runs on 6502 computer with and without MMU

- developed on a selfdesigned and -built 6502 computer

If someone is really interested in, I can also write an article for
a publication or so about it. But, well, 8 bit times are gone...

I'm coming from the Commordore world, not from atari (8bit) nor apple side.
The hardware is close to CBM3032 compatible, but the kernel itself is
completely hardware independent. So just the device drivers have to
be rewritten for porting it to another platform.

It is a good machine/OS to do some small control tasks,
where you can watch them from another shell...
My computer controls my audio equipment via infrared signals ;-)

Well, if you are interested in, here is it's homepage:

http://www.tu-chemnitz.de/~fachat/csa/

Well, I've messed about for a couple of hours and got a few games
converted into cartridge rom format. Piece of cake for some of them,
looks like they were converted to disk by just tacking on a header and
tailer. On a couple the cartridge tailer is still in there before the
disk one. I've only been able to test 8K roms though because XL-it
doesn't recognise a 16K ataribas.rom file.

It's been more like around 10-15 a day. Most of the messages have been
fairly long and involved. It sorta has the feel of a small group of
people sitting around telling stories and reminiscing about the old
days.

So far, there has been discussion about things like the invention of the
GUI at XEROX, prehistory of Apple (Jobs and Wozniak), and government
computing standards required of small computers for the military.

If I see any particularly good quotes I'll forward them here. I don't
guarantee I'll stay on the list myself though.

Source record: 82967

As some of you are aware, the Info-Atari8 Digest has been missing for a couple months now. This means that all the subscribers to this group in mail digest form haven't been seeing any postings at all.

I've tried to contact the moderator of the digest without any luck. If anyone out there knows something about this situation that I don't, please let me know ASAP. I will proceed on the assumption that no one else has acted yet, and I'll try to find a way to get the digest going again.

The first thing to do will be to contact the administrators at the site that the digestifier runs on, to see if we can at least get access to the subscriber list. I'm trying that now.

The trak drive I have still works great. The only problem is that the case
is grounded and can short out the AC power supply connector. A bit of tape
around the opening soon fixed that.

Your big spider robot is an archaeological excavator. You have to roam about the map collecting artifacts. On the map, the color of that sector deonotes how bad the radiation is in that area. Along the way, you shoot everything and pick up tools that you can add to your spider in the next sector.

Don't try to map out the whole area--shoot straight for the top. When you hit the top, it puts you back at the bottom, but more of the map is exposed.

Your main goal (that which increases your rank) is to pick up the tiny artifacts (either little discs or big cylinders of stacked discs, as I recall) and deposit them at one of the stations (indicated by a large mark on the map). Then, your rank goes up and you get temporary bonus powers that last for as many seconds as artifacts you deposited.

That's all the detail I've got time for now--let me know if it helps or if you're still confused.

You may find that altering the timings menu helps somewhat. I had
very similar problems, especially when writing data to the PC.
Messing about with the timings improved it, as did turning off the
turbo mode on my PC (!). I got it working pretty much OK, but then I
tried APE........ I haven't had a single problem with APE, every
transfer goes fast and error-free. I intend to register it as soon as
I have some spare cash (not often!).

I think SIO2PC has problems with a combination of fast machines and
older serial cards.

Hmmmmmm.... do you mean UTP like for 10BaseT? It should be OK at
that length but I wouldn't like to feed it around the mess of
speakers, power supplies and such on my desk!

I need a bunch of hardware. Here is some of the stuff I need:

Modems (1200-higher)
850, 1050, and 3rd party drives
Interface for printer, drives, modems, ect.
Monitor (not a TV)

another thing i think i need is somthing called a black box. im not sure, becuase i really dont know how to do this stuff with hard drives. but, i salvaged a 30 meg hard drive from an Xt the other day and i was wondering if i could hook it up to an Atari 8-bit. but i dont know if i can or how to do it

3740. Atari Portfolio And Add-Ons For Sale.

Newsgroup: comp.sys.atari.8bit

From: john@duplexx.com
Message-ID: <4q4cjf$d3e@shore.shore.net>
Source record: 82974

FOR SALE:

ATARI PORTFOLIO with cracked LCD - $25.00
This works great. A small part of the screen is blank. Great for
parts or to combine with the screen from another Portfolio.

PORTFOLIO/PC CARD DRIVE - 1 for $90.00 or 2 for $150.00
NEW - STILL IN BOXES. These allow you to read and write to
Portfolio Memory Cards with your PC. Get one for the home and one for
the office. These sold for over $300.00 new.

PORTFOLIO PARALLEL PORT - $25.00
NEW - STILL IN BOX. Print from the Portfolio. With the right
software(not included) you can transfer data between your Portfolio
and a PC.

PORTFOLIO SERIAL PORT - $25.00
With tele-communications software(not included) you can transfer
data between your Portfolio and a PC, MAC or ST. You can also print
from the Portfolio to a serial printer(like some laser printers and
most Apple printers.)

BUY IT ALL - $200.00
That's the Portfolio, 2 PC Card Drives, a Parallel Port, and a
Serial Port. New that would cost over $800.00.(minus the cost of
fixing the LCD screen)

All orders will get a disk full of PC and Portfolio Software.
(Including Windows programs that are compatible with the Portfolio
Address Book and Date Book.) Sales are COD via UPS or FEDEX. Prices
do not include shipping. Actual shipping charges will apply.

Respond here or via e-mail. I will respond quicker to e-mail.

The output from the Transformer is 9 Volts A.C. Sounds like you
are on a D.C. scale.
As for fixing a 1050 that's been not run in a while; reseat all the
chips mounted in sockets (under the metal shield on the main board).

Hope this helps; Rich Mier

>I have some spare cash (not often!).

I started messing with timings, but not much. I'll try some more. As far as APE is concerned, I think I'll try that out now!

>Hmmmmmm.... do you mean UTP like for 10BaseT? It should be OK at
>that length but I wouldn't like to feed it around the mess of
>speakers, power supplies and such on my desk!

My twisted pair is just good ol' Rack Shack four-wire twisted-pair telephone wire. It won't be going through an electrically noisy environment, but should be relatively immune anyway.

Thanks!

One of my favorites was Atari's "Legacy" (I think that was the name?). It was another wargame where you tried to save the world. Simple graphics, but a lot of fun to play, with neat little explosions.

"World Karate Championship" from Epyx was also very nice -- superb graphics, gameplay, and sound. I loved it when the guy bellowed in agony when he received a low-blow. <g>

There were others I can't think of at the moment...

: screen if you were lucky. A winchester drive (hard disk) was a costly
: optional extra for ALL machines then, even PC's. I don't think that
: spec of PC clone could emulate a dog turd, never mind an 800XL.

Heh - you just described my PC! ~4Mhz, 8086CPU, 640KRAM, 20MBHD, MCGA graphics (320x200x256 or 640x480x2).

Funny thing is, when Darek was at my house, he recompiled PC Xformer (it was 2.0 or 2.5 back then) to run on an 8086, and it WORKED! It was VERY VERY SLOW, but it worked! :)

I bet an Atari 8-bit could even emulate an Atari 8-bit! :) How's about a C=64? Run it in 160x192x64 mode! :)

How about Getaway. It was from APX, and I spent a lot of time driving the car around town running away from police.

Necromancer was one of the best, and I even won it once!

Encounter was an amazing game too.

I really think Synapse had some of the best games produced, except that they were the most heavily copy-protected too. Even their tapes were copy-protected, which meant that after 20 minutes of loading it would lock up and you had to hit rewind and try again.

Yes, I'll put in mention of Fort Apocalypse and Pharoah's Curse in there.
Does anybody know if Slamball (scrolling pinball game) ever came out and
if it was any good? I remember seeing it in their ads.

Oh, I forgot to mention one of my *all* time favorites :)

Gamestar Baseball - one of the *funnest* baseball games to come out before
Hardball. Me and my friend from college still play it once in awhile
even 10 years later. We still curse and gripe and throw joysticks at
each other when one of us makes a play that puts the other at a
disadvantage :) Trying to make insane base steals was also a joy.

Action Biker by Mastertronic. That was awesome. Drive around on your
motorcycle to that silly music and pick up the pieces you needed for the
'race'.

Montezuma's Revenge.

Kickstart.

Universe. One of the largest games for the 8-bit.

Nam by SSI.

Too many to remember in one shot. :}

Most of my favorites are ones that seem to make everyones list.
But the one I liked that I rarely see anyone (but me) mention
is 'Spare Change' from Broderbund. At the time, my two kids
couldn't get enough of this game. The action and animation
was so cute (including mini-movies) that the game could have
been a dud and still been one of their favorites.

Absolutely. Those games started as cartridges!
All you have to do is write the code so that it loads from between
A000-BFFF (for 8k cart) or 8000-BFFF (16k cart). I guess you can
relocate other code from those locations, but a cart that will run on
every atari would have to be in rom in those areas. There were about 5
or 6 companies that were selling eprom burners in the 80's I don't
know if you can get them now. Anything over 16k you would have to get
a bank selection screen. Search for Ivan van Porten's homepage, he has
either the actual document on how to build bank selectors or a link to
it. I lost it.

One thing I liked about Atari products in the early ages was the pictures on the game packages. I remember the box that my "Missile Command" game came in, for the 600XL computer I bought. There were also many cool pictures in Atari magazines at that time.

Does anybody know who did the pictures for the game titles that Atari released in the old days? Was it various artists?

Anders Skelander

With all this talk of 8-Bit Emulators has anyone ever thought of making an interface to plug a standard 9 Pin joystick into the gameport of a PC.

I presume it would require some type of DAC, but it must be possible as there are a lot of GamePads out there that work as though they're digital.

Any thoughts from anyone

I had that kind of fun, too, way back when. My friend had a very good sense of timing for hitting those "heat" fastballs. Unfortunately, I was not so lucky, and struck out many a time because of that. But one day my luck changed; his finger slipped and gave me an easy slow curve. I hit a grand slam, which let me come from behind and win. :)

You get to race. That long white-ish streak that you go across every
once in a while is the race track.

I agree! This has got to be one of the best games! I never played it on the
Atari but I had it for the C-64 and it was great.

One of the most fun to play games is Activision's Zenji. Nice music,
simple idea, but like most simple ideas, it gets harder and addictive.
I play it on my 64 emulator right now, but occasionally on the atari.
They're the same.

Sorry Torsten,

There isn't much that any version of PC Xformer does correctly .. in any version
apparently. I've only had about 6 to 8% of the programs that I've tried on the
PC version work even remotely close to the way they are supposed to. Even when
I DO get one to boot ... its full of bugs, making it almost unplayable.

BTW, DON'T expect to get any support from the author of the program, Darek Mihocka.
If you DARE to ask for support, you will most likely get a FLAME msg back at you
(if you get replied to at ALL), full of "profanity". He might even do to you what
he did to me: take you off the registered users list! This, of course, is in
direct conflict with the "Terms and Agreements" of his own software license, but then,
based on his product, I guess we can't really expect him to stand behind his licenses
either.

Best of luck to you, Torsten. I hope that someone out there in the Atari Community can
help you ... you won't get any from "Branch Always Software".

Regards .... Bill

quit

Finally, you can always ask me for a copy at URL:mailto:mcurrent@carleton.edu

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" shareware/freeware/PD developers should also be listed.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, public domain
```

software/freeware/shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No product can be developed by more than one developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information is given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

More BRIEF Definitions

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware - protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

===>> Much of what is popularly referred to as PD is really Freeware! <<<==

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of the more prominent sources I use. Current Notes magazine, published by Robert Boardman and Howard E. Carson; Atari Classics magazine, published by Jim Hood and Bob Woolley; and The Atari 8-Bit Omnibus, published by David A. Paterson.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

3778. Amdek Monitor

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-18 00:00:00 UTC
From: nurmix@gateway.ecn.com
Message-ID: <4q6n90$jvi@gateway.ecn.com>
Source record: 82918

I'm selling an Amdek Color-1 composite-color monitor that works great with the Atari 8-bits. And it will also work well as a television monitor when connected to a VCR or cable box. It's in good condition and has a clear and sharp picture.

I am asking $25 + shipping costs, or best offer.
This is for US addresses only though. If you are in another country we'll have to discuss it a bit further. :^)

Please E-Mail me at: Nurmix@socal.com -or- Nurmix@ecn.com

I don't know if they're all red or not, I haven't seen one before.

But you know what it is, don't you? It's the Atari cartridge for connecting
to the "Plato" education-oriented online service. Atari spent so much time
and effort designing the cartridge, the Plato service itself was about caput
by the time "The Learning Phone" was released.

Source record: 82921

>Okay, so I've been out of AtariLand for awhile...
>
>A week or two ago I noticed that Atari stock leaped to about $8+ per
>share. Frankly...Why?

Atari announced several months ago their intention to merge with disk drive manufacturer JTS. (JTS itself is a startup, but it's a new company made up of industry old-timers.) It's a weird merger: Atari becomes a division of JTS, while Atari stock becomes JTS stock. So Atari stockholders are soon to be JTS stockholders. The Tramiel's will be on the board, but they will not control JTS.

So think of Atari stock as JTS stock, and that basically explains the sudden rise in stock value.

From the view of JTS, this arrangement gives them access to Atari's cash, and allows them to go public on the AMEX without issuing stock of their own. (It's not worth so much, but there are a *lot* of Atari shares out there.) Most people are guessing JTS has no interest in the other assets of Atari, like the Jaguar and the large library of patents and copyrights. Some of us hold out hope that JTS intends to sell off their new Atari division shortly after the merger is completed.

When you configure APE, avoid IRQ conflicts.

In my case, I had a choice of com ports 1,2,3,4 with IRQ's 3,4.

I didn't want to have conflicts with my modem (COM2 at IRQ3) so I
configured APE for COM1 at IRQ4, (Same as my mouse.)
^^^^^^^^^^
Correction: I meant to say, COM3 at IRQ4 (same IRQ as my mouse.)

Everything went smoothly until I accidentally bumped the mouse. The
conflict shut down all communication between the Atari and the PC,
causing me to reboot.

I solved this by booting my PC without loading the mouse driver, thus
setting up a seperate config on my PC just for APE.

Hope this will save you some time. It had me going for awhile.
If anyone else has a better solution, I'm all ears.

Dave

Is your PC much more advanced than a '286? If so, you might have to reset the timing. I used to have a '286 and used the old, two-chip cable which gave me no problems. Last summer, I bought a Pentium 100 and found that some timing adjustments are in order. The directions are in the docs. It will be a time-consuming process.

If you are in a hurry, first, try this. After that initial piece of data goes through, hit the <BREAK> key on the Atari. If more data goes through, hit <BREAK> again. Each time you hit <BREAK>, you'll either get a little more data, a lot more data, or an error message. Of course, the error message will mean, "try the whole thing again," but sometimes you can finish the file or disk you're trying to copy.

If you're using Win95 it's better to boot to DOS than to use a DOS
window. The mouse driver is loaded, but does not respond in DOS, where
in windows it may. To boot to DOS, edit your MSDOS.SYS file and change
the BOOTGUI=1 to BOOTGUI=0. Now WIN95 will either stop at the C:> prompt,
or give you a boot menu.

Another way is to hit F8 while booting and bring up the menu and select DOS.

Also, if you have a video card that uses an S3 chip DO NOT USE COM4! The S3 chip gloms COM4 for it's own use sometimes.

I remember a couple of nostalgic favorites for personal reasons, which I haven't been able to find: Excalibur (an old APX game) and a game called Epidemic.

Yeah. I wish I could find it for the 8-bit. I just bought it (and several other Infocom Sci-fi games) for the Mac at Costco for $9.99.

I can't get my wife hooked on anything except Tetris ripoffs and general strategy build-an-empire games like Civilization or Master of Orion. Well, she did like "Slick Willie 0.97" for the Mac...

(Somebody asks about favorite 'underrated' games.)

Moriarty's 'Crash Dive' was my first typed in program from ANALOG, my first text adventure, first in about everything and I still feel it beats all the Infocom games (which you might see in what follows, I don't have a lot of patience or hand-eye skill.) Crash Dive has really nice interface with a player-missle screen that looks like horizontal DLIs, but isn't.

'Elevator Repairman'- Another from ANALOG. A classic, very playable, nicely done hand-eye.

(Hacker was ok, and here's a hint. Near the end of the game, don't go back to Wash DC by the same route you went before. Find a 'southern' route near Australia going across the Pacific to South America. If you want a complete game solution, I think it is available at Cleveland Freenet Atari sig in the reference section.)

'Sno-fite'

I really like Star Raiders II, many don't.

Clayton Walnum BASIC games, Dungeon Lord and Moon Lord.

Sargon III chess.

Atarinim by Dave and wife Oblad

'Camels', a commercial quality game.

Somebody mentioned 'gauntlet' the Don Lebeau one.

Lazertype from ANALOG.

Othello game (a couple)

Pirates, a good two play game by Dave Oblad

JD Casten Epsilon and Risky Rescue

Another Dave Oblad, Tricky Tracks.

Somebody mentioned Retrofire and lunar lander.

Tron and worm.

I like to play Carter's 'Uptown Manager' business simulation game.

Xagon from down under.

Almost all above are pd.

(I mean Dragon Lord BASIC game by Clayton Walnum. 'Dungeon Lord'
is an excellent game from ANALOG with looks like 79 players
and missles. I sure would like to know how he did that.)

3796. Red label cart - Is it a prototype?

Newsgroup: comp.sys.atari.8bit

I have an Atari cart the likes of which I have never seen before. Instead of the usual brown case with brown or silver label, this one has the brown case with a red label. It is RX8080, "The Learning Phone". Do they all have a red label or is this possibly a prototype version?

Speaking of SSI, the best one IMO is Cytron Masters. A two player strategy
shoot'emup.. can't get any more fun than that!

Encounter has to be one of the best shoot'emups out there.. almost like a
prehistoric one player-only DOOM.. then along came the MAze OF Agdagon by
dataQue.. networkable up to 8 players.. on an ATARI 8-bit!!

Probably just a really old Atari cratridge from back in the days of teh
Atari 400/800. My Shamus catridge is sort of a translucent red, and
doesn;t work with anything beyong the Atari 800.

Hi all out there,

I`ve got following burning questions!

1 There was a address of a company that upgrades a XF551 so that you can use
a 3.5" Disk in it. HE wrote the address but i want to know the Fax number
who know`s it ? Please E-Mail me.
Here is the address

Computer Software Services
PO Box 17660
Rochester, NY 14617
Info and Ordering: (716) 429.5639
2 I `ve talked with a friend of me and he sayed that he knows a person who has
part 3 & 4 of alternate reality. Does anybody know if they have been sold?
i believe the have been named wilderness and ....!

Who can tell me where i can get Infocom Text Adv. like Hitchhiker ..., Zork 2,
Beyond Zork... . I've 13 Infocom Adventures but there are only the same by the
companies that i have already.

Xformer Qtu Problem.
I have a problem with Qtu on my Atari 1040ST 1MB Mono Mon. H&S AT-Bus Card 125Mb
HD. I have build the XFormer cable, when i use the st Xformer 2.55 it works
perfekt, i can format disks and make everything that dos 2.5 allows. But when
I connect my XF551 or 1050 Turbo with the ST and turn on Power on the ST and
start Qtu it resets my ST. Whats the problem ? I`ve use a PC to download/upload
xl Soft but this is disapointing and I want to do it with my ST because it is
easier! Who can help me, has a tip for me?

Please E-Mail me!

3805. ABBUV JHV 96

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-18 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <4q5ttq$9r2@widukind.worms.fh-rpl.de>
Source record: 83004

I wrote a little time ago about the Abbuc JHV 96 and some people are not sure what a great show means.
At the last ABBUC JHV have been 3-4 Trader KE-Soft, AMC-Soft, People from Pockey /ANG and the ABBUC. There were about 70 visitors at the show and 20-30 people who showed soft- and hardware. There have been many ABBUC Regional Groups.
IF you travel from the USA or England you could be disappointed, i wrote my review from the side of german Fair's. At the german shows are between 50-100 visitors. So please call the ABBUC for more informations or dial the ABBUC Mailbox.
****
If someone has thougth that there would be more than 100 persons at the german fairs its my fault. There are not thousand and millions user but a few with the same interest (Atari 8 BIT).
****
Take a close look to The great Atari 8 Bit Resort from M. T.

I've you see this a second time it's ok.

Do you ever thought about the problem with Powerunits for the XL/XE?

I use a old 200Watt PC powerunit for 1-2 XL/XE, 1 Atari 520ST, and it works perfekt. Cool powerunit, 1 Unit for up to 7 devices XL/XE/XEGS.

I am working on a layout/hardware that changes the +12 to +9V for the 1050,XF. Think about it, you don't know how long you can get used powerunits for your system. A powerunit of a old XT cost not a arm and a leg but it is a all in one. There could be problems for germans (CE Zeichen) and you must know what to do. My XL works perfekt and i think it needs less energie than with a weak Atari powerunit.

What you need:

1 Pc powerunit ca 10-20DM 200W (+5 +12V for XL/XE/1050/XF) -12V for 520ST XL/XE
1-5 5 pol. Din Buchse female Power XL/XE
2-10 5 pol. Din connectors male kable powerunit - XL 2 per XL Floppy
1-3 6 pol. Din Buchse female Floppy power
1-3 6 pol. Din connectors male powerunit side
1-3 connectors Floppy side
kable
2-12meter 6 or 8 wired isolated kabel

2m 1.5"isolated wire
1 card on which you connect the +5 and +12V XL/XE/Floppy

1 divice to find +5V and +12V
something to make the hole in the powerunit.

Now look at the XL manual for the connection to the powerunit.
" Flopyy "

And don't work on a powerunit that is connected to the net.
110V/220V could be deadly. And don't do it, if you have no idea about what to do.

Andrew,

They all have a red label. I've got about 3 or 4 of them. Interesting to
plug it in and play around though. It's been a while, but if I remember
correctly, it had a screen that was 60 characters wide, didn't it?

Whilst reading the usual rubbish I find here, Chris Friend wrote something
interesting to me about getting started with:

Hello Chris,

BR>> I don't /think/ so. Put it this way, *I've* never seen an 800XE, and
CF> Look at the 8-bit FAQ next time it is posted....It has the list of

I've got it here. Direct quote:

Personal Computer(1985) same as 65XE with 128K plus ECI 800XE Personal
Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe. XE Ga

As you can see, it says mostly Eastern Europe.

CF> hardware and somewhere in there it lists the 800XE as a UK/Europe
CF> release only.

Which is different from what you claim. I will admit that it doesn't preclude
it's sale in the U.K.

I would also refer you to what I wrote. That is, the use of the word /think/.

OK, I thought SIO2PC was still freeware. If the status has changed, and if 4.13 is the current version, I guess the status has changed somewhat from the latest 3.19 version I could find, then let us know. If it's now a commercial product, advertize it. Let it fight APE on a level playing field. And if the programmer is making a comercial enterprise out of it, we should stop calling it the SIO2PC cable. The cable is an RS232-TTL-vice-versa cable. It doesn't rely on any particular item of software.

I agree that this is not the place to post such advertisements, but what makes it " .. base,immoral, perverted,"? and why are you the authority ? Funny but I have this outmoded notion that consenting adults have the right to do what they want. Has something to do with personal freedom.

Is there anyone who has the 4/82 issue of Compute!? My dad subscribed to COMPUTE! from 1980 to 1984, and I remember reading that issue, typing in programs, but that was about 12 to 15 years ago. Now I am trying to look for that issue, because I'm looking for certain program and/or articles in it, but I can't find it at all. I would appreciate a reply.

I have found that the main branch of our local public library in Birmingham, AL carries many, many years of microfiched copies of magazines. Granted, it won't be color, but your local library may have that issue in microfiche. It could also be expensive to copy, but you can get just the pages you need.

(#csc) I missed an issue of Compute's Gazette when I moved, and made a copy of the program listings at the library. The best games were in that one issue.

Fort Apocalypse was the game that made me want to get my first Atari 800.

No one's mentioned Flip & Flop yet, which put any other Q*bert type game to shame.

Rally Speedway: We used to crash on purpose just to see the driver roll out in flames.

Picnic Paranoia: Great music, and the sound fx were cool!

Pathfinder: Bust a path through the fire or die!

Zenji & ZoneRanger from Activision: I had 5-8 hour marathons with each of these.

Mail-Order Monsters by EA: I wish that they'd make a version of this for my PC, along with Seven Cities of Gold.

Pharoh's Curse: was easily the most frustrating game ever programmed for the 8-bit Atari. I could never win.

These are just a few of the underrated games. I think anyone who didn't actually own an Atari, or at least experience the fun of playing with one, pretty much underrates all of the games made.

You say you read no voltage from the power supply that belonged to the 1050, It puts out AC!, if you had it set on DC then you would get nothing..Just checking..If you have a strong red light at the bottom then you should have power..??

Where it has set so long perhaps the set period has hardened the lubrication on the rails the head moves upon?,, Try moving the head with your finger with it powered off, if it moves freely then not the problem if not then clean the rails and see if it will come up..??

: : yar! Death of An Apple! i have that somewhere.. I laugh at it every time..

: Where can one get these? I've HAD one or two of them. I kinda miss 'em ;)

Hmm. Speaking of the 'Death of An Apple', I do remember having a 'Death
of A Commodore' thing somewhere... It was fun to watch that giant fuji
smash the Commodore logo. :)

: Also, that PaperWeight 3.1 thing. I'm interested. :)

So am I. :) I read lots of comments in old back issues of _Analog_
about how evil this thing was, and how much fun people had with it. I
wanna try it. :)

As for fun games: Aztec Challenge. I would play that for hours at a time.
(but then again, I wasn't even in elementary school. :) BTW, I'm 14, and
those back issues of _Analog_ I referred to up there were my dad's.)
Cytron Masters (mentioned elsewhere in this thread) was probably one of
the most fun games I've ever played... is there a port to the PC
anywhere? (Or at least an .ATR/.XFD)
Picnic Paranoia (again, mentioned elsewhere) was always fun for my
mom. She _loved_ getting revenge on those little bugs. :)
Spy vs. Spy never worked too well for me, but I enjoyed catching other
people with those traps. It was fun to trap people in a room from which
they couldn't get out of and that had a time bomb in it (especially easy
at the start of the third level. Time bomb the room, set a pail of water
by the door, repeat. You get to zap the other guy hundreds of times, if
you feel like it. :)

Does anyone have a good algorithm for moving largeish chunks of
memory, better than e.g.:

```
LDX 00
LDA A000,X
STA 4000,X
LDA A100,X
STA 4100,X
LDA A200,X
STA 4200,X
INX
BNE blahblah
LDX (- 256 what's_left) ;bit of scheme there for the lisp masochists
in the crowd.
LDA A3000,X
STA 43000,X
INX
BNE bluerghbluergh
```

I'm sure I should be using recursion somewhere to achieve this.
Give me a break, I'm sort of new to assembler.

No, but I wouldn't post one anywhere :) Trying to make all the internet
suitable for kids is what the US government tried to do, and
fortunately didn't manage. There's no way you can prevent kids from
accessing wherever they want on the internet.

I agree that posting it here was totally inappropriate and wrong, but
posting it in say alt.sex would not be inappropriate, yet kids can
read that.

> I have this personal freedom you speak of, but I dont think it
> stretches to immoral perverted indecency,

You know, everyone is speaking about the "right" to post anything up on
the Internet. But with that right comes responiblity. You must remeber
that not everyone wants to see this stuff and some should even see this
like children. I do wish people who advertise this sort of thing will
stick to speciality newsgroups instead of broadbasing it everywhere, it's
like that in the real world BTW.

And those who feel that 'they' shouldn't have to be protected because the
children must be, do you let your Playboys out where your kids can read
them? Thought so...

: Same here.. never liked fighting games.. too.. umm.. jockish.

That's what makes my statement so amusing and ironic. :) NOW my girlfriend
and our Playstation-owning female friend (one of my first Tekkenites)
is playing "Battle Arena Toshinden". <sigh!>

: > : Arkanoids is always fun..
: >
: > And all of the other clones. Yeah! :)

: I don't remember there being too many other.. which ones were there?

I can think of two off the top of my head, but I'm pretty sure I have at
LEAST one more. Unicum and Exploding Wall. Both excellent (esp. EW).
Both pretty much need PAL machines. :)

Arkanoid (as in, THE real arcade game) came out for XL's, right? When?
When did the arcade game come out?

: I probably have those somewhere.. I also have Tetrix, some cool German
: Tetris game where the peices go off the sides instead of down, and a bunch
: others..

You're thinking of Dredis.

Let's see, there's:

Atartris
Atartris II
Cooltris
Cooltris II (not completed)
Valgus^2
Dredis
Fortress
Tetrix
Plaxtris (a TBXL game I was writing and found lately - I MUST finish it!)
Tetris 3D

That's all I've ever seen. Valgus^2 is Tetris coming from all FOUR
directions towards the center. The object is to make squares (vs lines).
Cool game! :)

I give big points to Alley Cat and Getaway. Alley Cat was a _fantastic_ game, but I don't ever remember reading a review or seeing ads for it. Must've come out at a bad time. And Getway was advertised quite a bit, but then the Atari Program Exchange went under. I wouldn't mind seeing some discussion of old APX games. I always thought they looked neat in the catalog, but I never played most of them (Smasher, Meltdown, Air Raid, Bootleg, Diggerbonk, etc).

Two other really cheeseball games I played for _years_ were Pacific Coast Highway (a two-player Frogger clone) and Wizard of Wor (low-res port of the arcade game). Just about every time I was at my parents' house from 1986-1993 I'd give 'em a whirl.

Another game I liked, albeit simple, was "Hovver Bover." (sp?) Along with "Necromancer," it had some of the nicest, dreamy sounding music made for the Atari. Long ago, I actually changed the written phrases the guys would speak, so if the mower or dog got the best of you, it'd be swearing. <g>

Hello, all.

I would like to draw upon the vast resources and knowledge of the Internet Atari 8-bit affictionados.
I am trying to design a program that relies on an at least semi-accurate (within one minute per week) clock designed in Atari 8-bit. I used the old "Mapping The Atari" book to design one, but its accuracy fails considerably (30 minutes per week!!) Does anyone know of a more accurate version of a clock? I'd prefer it in Basic source code, but MAC65 assembly code would work just as well.

Thank you in advance for any help.

Long before the Atari version, I'm sure.. It's European i think, because
the screen is so long that you can't see the score at the bottom.

Yup.. have that somehwhere, too I think.. just didn't know the name of
it.. I don't know if the disk or the program itself ever had a name on it
anywhere..

3858. ATARI Equipment, MUST SELL!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-20 00:00:00 UTC
From: terry.ortman@fantasy.com
Message-ID: <19960620053617.aaaa004oT@babyblue.cs.yale.edu>
Source record: 82879

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

DO NOT reply unless you are making a serious offer!!

NOTE: One of the people who said my price of $135.00 for the ATR8000
package was TOO HIGH, turned around and tried to sell someone who
contacted me, the same system, without cables, software, etc., just the
ATR8000, dual drives, and an Auto-Term Cart, for $150.00......

If you can FIND them LOWER priced elsewhere, and are NOT going to make
an OFFER, then buy them from somewhere else....

A lot of this stuff is being SOLD on consignment, as the LAST
remaining ATARI Software Company in this city, let alone maybe the
entire state, I often get a load of equipment to sell for the people,
and usually end up having to buy it from them, since it takes forever
to sometimes sell the equipment....

On another NOTE, ATARI has been bought by another company, who is
dropping the ATARI name, and will concentrate on the GAME business, so
the Atari computers, etc., will become harder to find....

Anyone interested, we will make our software catalog available, and
may even put all the 200+ MEGS of Atari Software we have accumulated
over the years on a CD-ROM for BBSes to support the Ancient 8-bit Atari
computers....

I've seen the ATARI 8-Bit FAQ, nice to see all Atari vendors
mentioned, and our name, address, goes unpublished.... We were
commonly seen in ANTIC, ANALOG, and recommended by Bill Wilkinson and
others of OSS, as to the quality of our software....

The LAST Commercial Title we released was a USPS BARCODER for ATARI
Printers, to print the USPS BARCODE on your address labels, to speed up
processing, and qualify for PreSorted Discounts... Barcodes have been
Approved by the US POSTMASTER at the Post Office, and the package
supports USPS 5 Digit Barcodes, 9 Digit Barcodes, and the 11 Digit
Delivery Point Barcodes, which it automatically computes and prints out
on every 9 digit barcode. For those who don't know, the 5 digit code
identifies city and state, the 9 digit will take you to the exact
address street, and the 11 point will pre-sort and route the letter to
the exact location, on the proper side of the street, etc., and

according to the USPS, if the letter just has the 11-digit barcode it
will be delivered to the proper address.... Price is $25.00, and is
available on 5.25 inch floppies for the Atari 8-bit computers,a nd will
run on any 48K or greater machine.....

Wow, 8 bit Atari. Where did you guys come from. Been on my PC too long. Thought all 8 bit Ataris were in closets somewhere. I know lots of folks with them with lots of dust. Some one please bring me up to date? Use to have a user group here in Las Vegas called S.N.A.C.C for souther nevada atari computer club. Anybody out there from this age? Or are you all new to still what I think is the best designed computer and best software ever made. Star Raider is only 8 k and it is still the best computer game I have ever played!!! We use to install bank swith memory on old 800 memory cartridges, we sold the single stroke cursor control, had a curcuit to allow the 1030 modem to auto answer, write protect switches on 830? disk drives, I even have a TOPO by androbot with a 130 xe inside (kinda a twist for both products from the founder of chuckie cheese pizza. Does anybody have a hard drive connected to a 800 so I can load all my old software in and get rid of the 1000,s of floppies in my cabinet? Did anybody remember the last year atari showed the 8 bit line at the C.E.S. show in Vegas. They had a portable 800 with a gui program (ie. windows). That whould be a great os to get a copy of! well i have gone looking for other 8 bit stuff on the net. Type at you later. Did anybody ever belong to the old 8 bit atari user group? I think I still have all the newsletters we use to exchange with?

Rick Rowland
Las Vegas, NV

Maybe I will get out my 1200Xl paper clip.

THis may or may not be the program you were talking about. Its from Compute's 3rd
book of Atari. I found it to be pretty accurate but I didn't leave it on for a
week to check. You can set the time and have it "hidden" until you need to
check (? min,sec) or you can write your own clock program to display the time.

```
100 REM CALCULATES TIME IT TAKES YOU TO PRESS <RETURN>
110 REM
120 OPEN #1,4,0,"K:"
130 FOR Z=18 TO 20:POKE Z,0:NEXT Z
140 GET #1,D: IF D=155 THEN 160
150 GOTO 140
160 A=PEEK(20):B=PEEK(19):C=PEEK(18)
170 SEC=INT((4.267*256*C)+(B*4.267)+(A/60))
180 MIN=INT(SEC/60)
190M=MIN*60
200 SEC=SEC-M

I finally made it to the end of the first level but never got very far in
the second. Does anybody remember how many levels were in this game? This
has to be one of the hardest games!

Are you sure you're thinking of Pharoah's Curse? All you had to do was
collect 10 treasures and return to the top of the pyramid. I was able to
consistently beat this game every time I played it as a kid. I still loved
it though for the graphics and gameplay.

About this statement Terry makes concerning the ease of finding atari computers, I seriously doubt this is true. Atari stopped making the 8bit machines a while ago, as we all know (should know?). There is no relation between the name of the company and the ease of finding the company's old hardware. Now if the above assertion is applied to the company's new and future products, then it has some credibility (sp?).

Just my 3 cents.

Here are some other great games for the Atari 8bits that have brought me years of joy.

Drelbs - Make boxes, save the princess, enter the alien zone. There is nothing else like this game, period.

Blue Max - Forget about Zaxxon. Blue Max is the scrolling flight game for the Atari 8-bits.

Boulderdash - The best puzzle game ever invented. And with the later released construction kit, you can make your own puzzles. Hey, does anyone have some home-made levels to share??

Crossfire - This port of one of Minter's early classics is great fun.

Journey to the Planets - These puzzles are hard to solve but not impossible. Not much replay after you solve it though.

K-razy Antiks - Once you get into the 'zone' on this one, you can play it forever. The gameplay is so addictative on this, it's scary.

Pooyan - A good port of the arcade.

Shamus & Shamus II - Frustrating at times but very rewarding once you finish it.

Wizard of Wor - Another great port.

Trolls and Tribulations - I've never finished this, but boy have I tried. Anyone here solve it?

Mr. Do - I saved my favorite for last. Another great 'zone' game. Keep earning those extra lives and you can have hours of bliss!

Does anyone remember a movie monster game that was out around the same time as the original Temple of Apshai? I believe it was from the same company as Temple of Apshai... (Epyx?) It involved various movie type monsters rampaging through a city. It was a role playing type thing. I remember helicopters and I "think" you played the monster and got to stomp on things.

I had both this game and the original Temple of Apshai role player on cassette for my Atari 800 (after spending $700 on the computer, who could afford a disk drive?)

Looks like it bit the dust - I will still send anything out of my archive via email to anyone who wants it (limit requests to 10 per every few days please). I would be happy to maintain an online archive, but once again, I NEED FTP SPACE! Obviously, with the fact that there's really no $$$ to be made in this, and I am not looking to, I also do not want to spend $$$ for ftp space. Doesn't ANYONE have an account available on a university server? That's the only way I see it flying. Or, an internet provider that gives users a static IP address and unliimited access so I could leave my extra computer connected 24 hrs a day?

Yea, I remember. It was called "Crush, Crumble, and Chomp" by Epyx. It
was really cool because it was written in BASIC and you could break out
of the game and keep the animated character set going whilst running
other BASIC programs! Wicked stuff.

"Crush, Crumble, and Chomp", if I remember correctly. That was one I
always wanted, but never got. Instead, I wasted money on EA's "Mail
Order Monsters" which was much too slow to be any good.

BTW, back then Epyx was also known as Automated Simulations. Neat, eh?

"Crush, Crumble And Chomp". In 1986 Epyx released "Movie Monster Game"
which was more action oriented. For Commodore and Apple II (wretched).

From: justin@newreach.net
Message-ID: <31C9F536.70F1@newreach.net>
Source record: 82901

I recently got another atari 1050 drive. My previous one had ICDs Sparta DOS US Doubler chipset installed in it, but the stepper motor crashed some time ago (or so I thought). I tested the new drive and it worked fine, but I needed the US Doubler modification since most of my disks were converted. I swapped the mother boards. The drive did not work (I got rapid boot errors and the sound of an error 139-dvice ACK error). So I put the original motherboard back in the new drive. Now, the drive motor will not turn. The stepper motor works, and the drive operating light comes on and stays on for the correct amount of time when the door is shut, but the motor does not spin. Any suggestions will be greaty appreciated. Please send any ideas to justin@newreach.net.

Howdy

Holy moly, are you guys serious?

I guess I must rock, because I can finish it every time I play now.
It's been a year or to since last I played it, but there are on the order
of 4-5 levels or so. It did take me some time to get through it the first
time, but, once you've made it through, it's not too hard to repeat.

Tell ya what--I'll play it through again tonight and take notes :)

Oh really? How many children have the money to buy their own computers
these days? How many children have accounts with the phone companies or
ISPs?

This isn't a free broadcast medium. It does take a level of knowledge and
some non-trival expenditure of money on electronics to access.

So? The real problem isn't some spammer but some lazy slob of a parent
that have no clue as to what their kiddies are up to and expect the whole
world to be thier baby sitters.

Nevermind that the ad itself was not obscene (not even by American
standards which are obscene themselves).

>door, would you post a sex advert somewhere you kew minors would have
>access to it?,

Never seen a Playboy ad on TV?

> I have this personal freedom you speak of, but I dont think it
>stretches to immoral perverted indecency,

You have no CONCEPT of morality.

You must really cringe when you wash yourself.

3887. 4Sale:Misc Hardware

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-21 00:00:00 UTC
From: kmajkut@netcom.com
Message-ID: <kmajkutDtBsv0.M6u@netcom.com>
Source record: 82766

Here's a bunch of misc hardware, software and books. I'd really
like to sell this in one lot since it's not at my house and I
have to have someone else do the shipping. Make me an offer
but consider that if you can't drive to CT and pick it up then
the cost will have to include shipping plus a few dollars to
cover driving over to Mail Boxes Etc :) .

Anyway, here's the stuff:
1 Atari 800 computer w/48k of Atari memory
1 Atari 800 computer w/16k of Atari memory, 32k of other memory
and 'Impossible'.
1 1050 Disk drive - working.
1 1050 Disk drive - not working. It just starts up and spins.
(One drive is in the original box if anyone cares)
1 1030 300baud modem.
1 410 Cassette recorder.
(In the original box if anyone cares)
3 or 4 power cables.
3 Atari joysticks.
1 set of paddles.
2 Printer Adapters(One works and one doesn't)
Uprint A16 & MPP1150

Some misc interface cables.

Compute Books:
Machine Language for Beginners
Book of Atari Graphics
Books 1,2,3 of Atari
Your Atari Computer:A guide to the ATari 400/800
Atari Basic
Mapping the Atari
Atari 1050 Field Reference Manual

Carts:
Robotron
BASIC
Kickback(I don't remember what this is)
AtariWriter

Software:
Infocom-Ballyhoo,Infidel,Wishbringer(all in boxes,etc)
Many other pieces of software. Mostly arcade games and
infocom games.

Magazines:
Some misc COMPUTE , etc.

No guarantees on anything since most of it hasn't been used in a few years. One of the 800's was powered up last year and still worked though. Please don't ask me to look up something in a book, look for a piece of software or see if something works. If I could, I would, but I can't.

-Keith

>
> Luis.....:)

Luis,
.BIN file are Binary Load files they could also be called .OBJ,
COM, .EXE. These may be load and go or run at address files. More than
likely these would be the latter and you'd have to know where in memory
they like to be pur and run from. In AtariDOS 2.5 you'd load these
files with menu selection M and then provide the memory address of the
beginning of memory to put the file. You may also need the number of
bytes for the length of the file. I forget at this point. I rarely had
to do this. Most binary files are .OBJ, .COM or .EXE files that run
from menu selection L then the file name. These would be like games and
application programs other than BASIC. .BIN files sometimes are plug-in
parts that are run from other programs and you don't have to do
anything with them except make sure they are stored in the proper place
with the executing program.

Terry Ortman (terry.ortman@fantasy.com) wrote:
: ATARI Equipment, MUST SELL!!!

: ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV
: connector, original cost $599.00, Joysticks $19.95 each, asking $100.00
: or best offer.

: ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb
: (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4
: disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5
: floppies, any IBM compatible printer, modem port for using any RS232C
: compatible external modem, includes Auto-Term Disk for Atari computers,
: CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS
: master Disk, CP/M Supplement Manual, modem cable, printer cable,
: original cost $695.00 for the ATR8000 Basic system, printer cable
: $39.95, Modem cable $39.95, asking $100.00.

: Dual Floppy Disk Drives in case with power supply and cooling fan,
: connecting cable, for above ATR8000 or any IBM compatible computer.
: Case can hold 4 half height 5.25 floppies, original cost $895.00, Case
: alone is worth $89.95 at most supply companies, asking $65.00.

: Both ATR8000 and Dual Disk Drives, $135.00

: ATARI 1027 Letter Quality Printer, New in Box, with ink rollers,
: manual, power supply, connecting cables, oil, original cost $399.95.
: Also have a non-working 1027, can be fixed at any Atari service center,
: both printers cost new $399.95 each, asking $100.00 for both of them.

: ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very
: good condition, like new, supports single and dual density modes,
: includes power supply, original cost $179.95, asking $75.00.

: Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers.
: Upgrades and replaces the 6502C in the computer with the 16-bit 65C816
: CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up
: programs as much as 350% faster. The 65C816 processes 4 instructions
: per clock cycle (Only the new P6, 80686 Intel chip does that, besides
: this), as compared to the 6502 which processes one instruction per
: clock cycle. Original cost $249.95. Includes T816 assembler $75.00,
: Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks,
: valued at $25.00 each. Asking $250.00 for the entire package.

: ATARI 800XL upgraded to 256K memory, will run most 130XE specific
: programs, already wired for Turbo-816 installation, just need to
: re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original
: cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the
: 256K DRAMs, asking $125.00.

: Supra External 2400 Baud Modem, includes powewr supply, no manual,
: Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

: MUST SELL, will consider any reasonable offers on this equipment.

: Send orders to:

: STARFLEET SOFTWARE Company
: 1037 West Leafland Avenue
: Decatur, Illinois 62522-1537

: Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
: BADLY someone has to have one, or a trak double-sided slave drive.
: MAKE OFFERS!!

: DO NOT reply unless you are making a serious offer!!

: NOTE: One of the people who said my price of $135.00 for the ATR8000
: package was TOO HIGH, turned around and tried to sell someone who
: contacted me, the same system, without cables, software, etc., just the
: ATR8000, dual drives, and an Auto-Term Cart, for $150.00......

: If you can FIND them LOWER priced elsewhere, and are NOT going to make
: an OFFER, then buy them from somewhere else....

: A lot of this stuff is being SOLD on consignment, as the LAST
: remaining ATARI Software Company in this city, let alone maybe the
: entire state, I often get a load of equipment to sell for the people,
: and usually end up having to buy it from them, since it takes forever
: to sometimes sell the equipment....

: On another NOTE, ATARI has been bought by another company, who is
: dropping the ATARI name, and will concentrate on the GAME business, so
: the Atari computers, etc., will become harder to find....

: Anyone interested, we will make our software catalog available, and
: may even put all the 200+ MEGS of Atari Software we have accumulated
: over the years on a CD-ROM for BBSes to support the Ancient 8-bit Atari
: computers....

: I've seen the ATARI 8-Bit FAQ, nice to see all Atari vendors
: mentioned, and our name, address, goes unpublished.... We were
: commonly seen in ANTIC, ANALOG, and recommended by Bill Wilkinson and
: others of OSS, as to the quality of our software....

: The LAST Commercial Title we released was a USPS BARCODER for ATARI
: Printers, to print the USPS BARCODE on your address labels, to speed up
: processing, and qualify for PreSorted Discounts... Barcodes have been
: Approved by the US POSTMASTER at the Post Office, and the package

: supports USPS 5 Digit Barcodes, 9 Digit Barcodes, and the 11 Digit
: Delivery Point Barcodes, which it automatically computes and prints out
: on every 9 digit barcode. For those who don't know, the 5 digit code
: identifies city and state, the 9 digit will take you to the exact
: address street, and the 11 point will pre-sort and route the letter to
: the exact location, on the proper side of the street, etc., and
: according to the USPS, if the letter just has the 11-digit barcode it
: will be delivered to the proper address.... Price is $25.00, and is
: available on 5.25 inch floppies for the Atari 8-bit computers,a nd will
: run on any 48K or greater machine.....

I have one of those and to this day has never been used. Of course, the
company went down the tubes just after I got the blasted thing. Mine is
the same as yours. Red label, black lettering and brown case.

If I understan you correctly, you want to send a file as an
attachment to the news? News doesn't work that way. It is single layer
text. If you are trying to incluse text from a file within your
message, then you might look for a way to "Import Text" into a message.
Attached files can be dome in e-mail between one or more individuals,
but not in a broadcast forum like this. (To the best of my knowledge.)

Add to this: JACS Jersey Atari Computer Society (still in
operation) has an 8-bit and ST disk library. Requests for these can be
made through the JACS BBS at (609) 346-1224. Pricing is similar. The
BBS is nice too. I tend to frequent there ad Dr. Jolts!
JACS meets once a month, usually the first Tuesday of the month at
the president's place. Mike Hopkins is the president/BBS SysOp. JACS is
located in Bellmawr, NJ (US).

If you are relying on the jiffy clock, you'll never get an accurate clock. It is suppose to update with VBI (every 1/60 sec.), but it may be off a bit. If you can find one, buy an R-Time8 and use SpartaDOS. It will be much closer. RT8 and SD update the jiffy clock memory locations as raw time, one byte for hour (20d) one byte for minute (19d) and one byte for seconds (18d). My RT8 is prety stable and seems to be only a couple of minutes/year off. Not too bad.

John,
One of my favorites was in Antic. Mini-Golf. I forget the guy's
name. (David Plotkin seems do come to mind, but I don't think that's
right.) It was written in BASIC XL and he hid all of the variables. I
really wish I knew how he did that. The play is good, graphics descent
for BXL and fun to play. You really have to know geometry to take
advantage of it. My all-time favotire is Boulder Dash (Original
version). Tough, but reall addicting. I could only get to the 8th level
out of something like 99.

I am posting this message for a friend without his own Internet account.

ALL SOFTWARE PACKAGES ARE ORIGINALS WITH COMPLETE DOCS, DISKS, AND
BOXES, unless noted with a * which means there is no box. All opened disks
have been tested and I will guarantee they work.

Rather than post separate for sale messages for each computer as I have done
in the past, I thought I'd combine them into one large list so people could
see everything I have available. If you are interested in anything, please
read the end of the message before replying.

Items listed in this order:
Part 1. Commodore 64/128 game software (many: $2.50-$4 each), datasette
Part 2. Amiga 3.5" game software (4 games @ $4-$5 each)
Part 3. IBM old business software (several @ $3-$5 each)
Part 4. Apple II PFS disks, GS/Mac ADB-style MIDI interface
Part 5. Atari ST software (2 items @ $1-$3 each)
Part 6. TI-99/4A cartridges (2 educational @ $3 each)
Part 7. DBase II/III computer books (several)

Feel free to make reasonable offers on anything below. Few prices are firm,
especially if you are buying several other items.

=== Part 1. Commodore 64/128 (all 5.25" disks) ================================

$2.50 each

Deceptor
Force 7
GEOS Desk Pack I *
Sky Runner

3 for $10

Blue Angels
Die Hard
Oil Barons (big and heavy package)
Paperclip 64 *
Paperclip Spell Pack *
PHM Pegasus
Print Power (+Atari)
Top 20 Solid Gold (Cosmi) *
Top Fuel Eliminator

TV Sports Football
X-15 Alpha Mission

$4 each

Ace of Aces
Beyond Dark Castle *
Beyond Zork 128 *
Border Zone *
Defender of the Crown
Grave Yardage *
Kings of the Beach *
Millionaire *
Monopoly (Leisure Genius)
Murder by the Dozen *
Nord and Bert *
Pipe Dream *
Tomahawk

Hardware:
Commodore 64/PET Datasette.....$7

=== Part 2. Amiga 3.5" disks ==

Jack Nicklaus' Golf, no box....$4
Midwinter.....$4 without box, $5 with box
Pioneer Plague, no box.....$5
Warlock.....$4 without box, $5 with box

=== Part 3. IBM (mostly 5.25" disks) ==

The following business programs are complete with original manuals and disks.

Chartmaster 6.21 by Ashton-Tate [*] $4
Comms (1987) by Zortech $3
Diskette Manager III 1.0 by Lassen Software [*] $3
Double DOS (1986) by Softlogic Solutions $4
Dr. DOS 6.0 by Digital Research [*] $4
Form Filler 1.5 by Block Publishing $5
Inside Track II by I-Track Corp $5
Lotus Freelance Plus 2.0 by Lotus $5
(can't tell if it's a demo - a sticker was neatly removed from each disk)
Lotus Graphwriter 1.0 by Lotus [*] $4
Lotus Metro 1.0 by Lotus [*] $4
PC Focus 3.0 by Information Builders $5
Primetime Personal (Time Manager) 1.23 by Prime Time [*] .$3
Prodex Phone Management System 1.4 by Prodex [*] $3
Q&A Write 1.02 by Symantec [*] $4
Secretary Bird (1988) by Software Toolworks $5

Note: [*] indicates that the package and/or disks have a sticker which say
something to the effect of "Evaluation Copy" or "Demo version - not for
resale". I think most, if not all, of these are still full working

versions which were meant for stores to demo to customers. Feel free
to make reasonable offers on the whole lot.

=== Part 4. Apple II+/e (all 5.25" disks) ==================================

Hardware: Apple-brand MIDI interface with cables (plugs into ADB port) - $16

ORIGINAL DISKS ONLY for 15 different PFS:File, PFS:Graph, PFS:Write, etc -
50 cents ea. disk - can provide a complete list if interested

=== Part 5. Atari ==

Atari ST 3.5" software
E-Z Track MIDI Sequencer packages - 1 new for $3, 1 opened for $2
Zork I disk (original disk only) - $1

Also looking for Clowns & Balloons game disk for Atari 8-bit -- will trade

=== Part 6. TI-99/4A ===

Working cartridges - no boxes

$3 each

Beginning Grammar, no docs
Household Budget Management, w/ docs

Cartridges WANTED (will also trade the above for or possibly buy):
Beyond Parsec, Bigfoot, Choplifter, Computer War, Crossfire, Joust,
Jumpman Jr., Munchman 2, Scrabble, Space Journey, Spy's Demise, and Tris.

=== Part 7. Books ==

I have too many DBase books and would like to sell most of the following.
If any of them interest you, please make an offer on each in the $3-$6
range.

Advanced DBase III Plus Programming and Techniques by Miram Liskin
Advanced Programmer's Guide to DBase II and III by Luis Castro
Advanced Techniques in DBase II by Alan Simpsons
Advanced Techniques in DBase III by Alan Simpson
Command Performance DBase II by Douglas Hergert
DBase III Plus & Local Area Networks by William Bates
DBase III Plus Programmer's Library by Joseph-David Carrabis
DBase III Plus To Go by Peter Randall
Everyman's Database Primer Featuring DBase II by Robert Byers
Expert DBase III Plus by Judd Robbins
Programming with DBase II by Cary Prague
Understanding DBase III Plus by Alan Simpson
Using DBase II by Carl Townsend

==

The above prices do not include shipping. I'm in California. Depending on
how far away you are, how many items you want, if they have boxes, and how

heavy everything is, the shipping cost usually ranges from $4 to $8 UPS or priority US mail. I don't have time to deal with lots of small transactions, so I need to ask a minimum of $15 worth of items. If you buy a lot of stuff at once, I will make you a deal on the shipping. In general, a few pieces of software cost $4 or $5 to ship.

I will only ship within the continental UNITED STATES.

Thank you,
Randall

Please send e-mail to steven@rain.org and include at the top of the message or in the subject header: "Forward to Randall". Because these messages will be hand-carried on floppy disk or sent to me via modem only once or twice per week, it may take me a little while to respond.

The 65XE has separate luma/chroma outputs in addition to the composite
video output. If your monitor cable has more than two plugs on the
monitor end, try different ones on the back of the 1702 until you get a
clear color picture.

Howdy

To see if I could follow up on my boasting about my Spelunking skills,
I whipped it out (the game, that is) and played it a bit this evening.

After reacquainting myself w/ the controls and trying out a couple of
new sticks, I was able to get to the last level on my 2nd try.

Here are the levels of the game:
Elevator
Ropes (as the name implies, tons of ropes here)
Falls (cool part of this section is going over a waterfall in a barrel,
then getting a harpoon gun and shooting a rope up to the ceiling to get
back up the falls)
Shaft (this is the hardest one. It's BIG! A loooong shaft separates the
left and right parts of the level, and a water geyser surges up and down
[slowly], carrying a platform on its top. This is where I bought it in the
first game of the evening, since I didn't quite remember at which places
I needed to get off the platform and explore for keys and such. This is the
part that took th emost playing to figure out.
Pyramid (pretty short and easy--you ascend a small pyramid...)
Treasure (again, kinda short and straightforward)

That's it!

3906. 8 Bit Game List

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-21 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <4qdlm2$7ke@widukind.worms.fh-rpl.de>
Source record: 82785

Hi to all,

I have to correct something, that hasn' t been right understand.

I have a ST Xformer QTU problem not a STXformer 2.31 or 2.55 problem.
I use only QTU (when it runs) on my ST because i have a cheaper and
better emu of the Atari 8 Bit (! a Atari 800XL !).

My problem is that my ST resets when i start Qtu.

I 've a 1040STF Rev C. with 1MB no IMP Chips and a second Tos installed
(206) and a harddisk. I used before a REV i or J 1040 and it worked
(the ST works no longer, R.I.P Chips).

I use Qtu to transfere Atari file downloaded from the Internet to a 1050.

I have the Xformer kable and a not modified 1050 . It seem's that Qtu
don't love his great Atari 16/32Bit brother and kick's it. In this
situation my question:
Who has the same Problem and has solved it ? (not dropped STXFormer / ST)

I have a Pc but want to use my ST who gives me a tip.

I have no probs with STXformer only with Qtu. I haven't tested the amount
of original soft that run with the Xformers because i have an lovely Atari
800XL and 1050.

My 100% running and kompatible emu (Atari 8 BIT) is hungry and wants
a meal. Please E-mail me .

thanks to all that can help me.

Torsten Schall
(Member of RAM Abbuc User Group Germany)
E-Mail : schallt@worms.de

Who has a list of all the soft that has been released for the Atari 8 Bit from
84-88?
I am searching for softlist of SSI, EA, Infocom, Adventure International, Mag.
Scrolls, Synapse ...

"Mr. Maddog" <mrmaddog@prolog.net> wrote:

> You know, everyone is speaking about the "right" to post anything
> up on the Internet.
First, keep in mind that Usenet news is *not* restricted
to the Internet.

> But with that right comes resposniblity.

For example, whoever you are, whichever of this long list
of newsgroups you come from, *why* post it to comp.sys.cbm? *None*
of this has anything to do with 8-bit Commodore computers. I bet
most of the 8000 nude celebrity pics are in jepg format, which
cannot yet be displayed on a Commodore 64 or Commodore 128. I know
this didn't come from comp.sys.cbm. So I could trim comp.sys.cbm
out and still get to whoever sent this to us 'in public', as they
say, 'no private e-mail'. But what about the *responsibility* to
avoid mindlessly posting this thread to umpteen different newsgroups
because you are either too lazy or too unskilled to trim down the
newsgroup distribution list?
Hint #1: if you don't know how to trim the distribution list,
simply do not respond to a posting that was distributed to more
than 3 newsgroups. It's that simple. If you are spreading this
all over the place for no better reason than lack of knowledge or,
worse, pure laziness, *hold* *your* *tongue*. There's someone
else out there who has the same opinion (or close enough) who
is prepared to take the time to avoid this kind of spam
multiplication.
Hint #2: if you don't *know* what a newsgroup is about,
don't post to it. And it is no excuse to say, 'it was crossposted
on my newsgroup, I just hit "reply".' See hint #1.

Virtually,

Bruce R. McFarling, Newcastle, NSW
ecbm@cc.newcastle.edu.au

3908. Atari 1027 Printer

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-21 00:00:00 UTC
From: johnha@controls.eurotherm.co.uk
Message-ID: <4qdlb3$1ke@chianti.controls.eurotherm.co.uk>
Source record: 82787

I have an Atari 1027 printer, it is like a sort of cross between a daisy wheel, and a golfball, but with an atari type interface on it. If anybody wants then please e-mail me.

Many thanks.

John Hanson.

3909. FS/T: Atari 8-bit computer items [06/21/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-21 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4qe6uj$lta@sjx-ixn6.ix.netcom.com>
Source record: 82788

All VGA FS/T lists are updated weekly and are available on the WWW at
http://www.io.com/~vga2000/

This list was last updated on 06/17/96

NOTE: Screen shots of some of these games are available on my
web site.

I have the following Atari 8-bit software and hardware for sale or
trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. For faster service, please
include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
given priority (especially if the trade offer overwhelms me).
I collect for over 40 different systems, so please feel free
to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed.

5) No package deals on games or systems. All prices are clearly
listed.

6) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. My personal
philosophy is that something is only worth what someone is
willing to pay for it.

7) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted.

8) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 6.00 Atariwriter
$ 5.00 Basic -- for the 400 and 800
$ 6.00 Basketball
$10.00 Delta Drawing (Spinnaker)
$ 7.50 Deluxe Invaders (Roklan)
$10.00 Jumbo Jet Pilot (Thorn EMI)
$10.00 Kids on Keys (Spinnaker)
$10.00 River Raid (Activision)

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they
are marked) you will have the option of buying a BRAND NEW RF
switchbox for $5 that is virtually identical to one sold at Radio
Shack for $7, plus tax. It allows for the connection of both 300 OHM
and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with
it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1200XL COMPUTER.

This item has not been tested.

$19.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #3

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 65XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$34.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #5

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$32.00

*****

LOT #6

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 9.00

*****

LOT #7

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$24.00

*****

Hmm... now I remember making it at least as far as Shaft. Maybe even to
Treasure but I know I never finished. There was one level I always seemed to
run out of energy on...

Now that you mention, I think I made it at least as far as the Falls. I
remember the name anyway. Anybody remember what comes after that?

For the billionth time, Atari wasn't bought by another company. Atari has agreed to merge with another company, and although the merged company will not have the Atari name, the Atari name will not be dropped, and Atari has the upper hand in the merger. Atari loaned $25 million to the other company, and in the event the merger falls through, Atari acquires the other company. (Does this sound familiar? Does Amiga ring a bell?)

The merger still has yet to take effect.

Sounds similar to "Rampage" where upto three players controlling large
monsters could trash (flatten) a city eating cars and people and stomping
on helicopters and tanks on the way. Now that was a good game (I only played
the arcade version though). Was it released for the Atari?

3915. On 'bandwidth' and 'under-rated games'

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-21 00:00:00 UTC
From: cb541@cleveland.Freenet.Edu
Message-ID: <4qeojo$ghq@madeline.INS.CWRU.Edu>
Source record: 82794

(On various threads.)
PEOPLE, I really suggest and think it would be a good idea
to stop commenting on the '8000 nude pictures' thread. As
someone pointed out, every followup to this thread is cross
posted to a bunch of newsgroups. I don't even want to hear
about it anymore, it doesn't belong at all in csa8.
On this line of thought (wasted 'bandwidth'.) M. Current has
told me he's going to try to figure a way to decrease the
'bandwidth' of the FAQ and Vendor List. Now if the FAQ
keeper tries to keep the # of bytes down, I think we all
should be aware of this, like try not to re-post Terry
Ortman's entire for sale thing in a two line comment on it.
And M. J. Novak keeps posting his for sale list. It seems
to be getting bigger and bigger and more and more frequent,
or maybe it's just my imagination.
Thanks for listening.
****
About 'under-rated games'.
Somebody mentioned Antic 'Mini-golf'. Never saw it, but I'm
glad somebody is mentioning the little magazine and pd games
that were really the most fun for me. I got lots of them,
yes I got the commercial cracked ones too, but I enjoyed the
magazine games more than the involved and more difficult
commercial games.
Along the lines of 'Mini-golf', There was/is a really neat
'Golf' game that was published on an AC (Atari Classics)
disk that was extremely well done and playable. Although
frustrating to me, I almost finished the game, a real stick
with it for me.
AC disks aren't pd and I think this game came from Germany
(or Poland), but it may be around. I really don't know the
(c) status of this game, don't remember and it is packed
away and I don't have access to it readily to send it to
anybody.
****
I just read another large for sale of TI, Apple][,
IBM, etc. A week or so ago I sent the 'How to advertise
on usenet' msg from news.announce.newusers to a couple
people who cross-posted their auctions here. It worked,
these guys were kind enough to stop posting over 100k
of auctions per day. A Mr. Hoffman asked me to try to
get a comp.sys.atari.forsale group going. I didn't want
to do that because I like to hear from, say, J. King
when he has a MIO or BB or MUX and say, Bill Kendrick

when he has a ???? or the little for sale ads. I like to hear the little msgs. about Bob Klass repairs of 1050 and MIO. (I don't think anyone else, not even FTe, excuse me if I'm wrong, repairs MIOs.) I'm getting fed up with the huge cross-posted mini-spams. I hope others express something about this because I think it is ruining the group. I know I take up my bandwidth, but it is not with a huge cross-posted anything and it is not just a re-post quote of somebody elses post(s).

Yar, that's right!!!!

I also own an ATARI 800 and 800XL --- the best 8-bit machine ever..

And now AMIGA 2000/060 --- hoping to stay the best 32-bit machine since 1983 ;-) (A1000 - 1983>32-bit) but now Win95 is also 32-bit ... Imagine that !!!! ;-))))

Jay Miner was the King!!!! "in memoriam"

By the way, is there an ATARI emulator on AMIGA???

I just heard from an emulator on PC !? But you need there to start VESA-drivers for the special antic-effects! :-)

May the force be with you...

Eric Noss (mrmaddog@prolog.net) offered:

> You must remeber that not everyone wants to see this stuff.

AND I must also remember that not everyone is required to read a posting with the nauseous word "nude" in the subject line. Goodness me!

Next Tony Greenwood (stosser@airtime.co.uk) cautioned:

> ...postings should take into consideration that minors have just as
> much access to these newsgroups as your consenting adults do. I have
> this personal freedom you speak of, but I dont think it stretches to
> immoral perverted indecency....

Few things will pique an adolescents interest more than for an adult to tell them that something they see as pleasant, i.e., nudity, is "immoral perverted indecency". God, what a weird attitude. You did notice that interested parties had to SEND for this material, didn't you? It isn't distributed on the net and it probably will be MAILED to the recipient. Please note that there was no mention of donkeys, leather, children, etc.

Then Dave Baseley (dbaseley@cartech.com) ordered:

> ....[Blah blah blah (at least three bags full)]....Terminate this
> thread!...this discussion really does not belong here.

It's one of the fundamentals of discuss/debate, Dave, that you don't put forward your views and then imply that there is nothing more anyone else can possibly add by declaring the subject closed!

AND I'M GETTING QUITE TIRED OF YOUR CONTINUAL CROSSPOSTING, TOO, DAVE!

Hmmm. Was there 2 different versions of this game or something (cart and disk)? I have a rom image which I thought was an unmodified image of the cart. The passwords are like "Hoser" or "Hosehead". I never thought the game was very hard either. Avoid the zombie and and the vulture, collect the treasures. Nothing to it. But maybe this is a cracked version or something which is easier to play.

What makes the regular game so hard?

Yep, that sounds about right. I think most people who say that it runs 80%+
of their games flawlessly have either never seen a real 8-bit run them, or
they forgot what it was like.

Yeah. "Crush, Crumble and Chomp" or something like that.

> I had both this game and the original Temple of Apshai role player on
> cassette for my Atari 800 (after spending $700 on the computer, who
> could afford a disk drive?)

Oh, yeah. My older brother bought the first family Atari 8-bit, back in 1981 for about $600 and $300 or more for a single 810. And to think that last year, I bought an 800, two 1050s, a 1025, and about 50 software titles for $100...so much for inflation...

Apshai frustrated the hell out of us. I can still see the bright yellow screen with just one small phrase in the middle:

"Thou art slain!"

There was an article in an old ANALOG about making an onscreen clock, in
which they discuss this. They had a solution which made the clock very
accurate. I will try to find it this weekend and let everyon know!!

Atari hasn't been bought by another company, Atari is merging with a new disk drive maker called JTS. The money went from Atari to JTS.

In the short term, Atari is to be a division of JTS. But JTS most certainly will not concentrate on the game business, they will continue trying to make a dent in the disk drive business.

> I've seen the ATARI 8-Bit FAQ, nice to see all Atari vendors

I haven't noticed that anyone's mentioned Xagon, which was apparently put out by M.A.C.E. Australia. This is a very cool variation on the Q*Bert theme - you have a little round guy with a hat and sunglasses (kinda Blues Brothers-ish), and you hop around levels that are made up of hexagonal-shaped platforms that move up and down. The object is to jump on the platforms and get them all down to the same height, while avoiding the baddies that pursue you around the level. To add to the challenge, some platforms move up and down, and others are teleport platforms or quicksand platforms. You can spring a bad guy from an adjacent platform by hitting the trigger and moving the joystick in the direction of the platform to "pop"....the catch being, of course, that you have to jump on that platform another couple of times to get it back down.

Anyone else have this? It's quite well done....I'm surprised I've never seen this mentioned anywhere.....

Yeah, I have this --- it ruled! It was always lots of fun to play 2
player and spring the other guy way up. He'd retaliate, of course, which
usually led to the entire level having to be redone again. :) Those
baloons on the higher levels were tough though. And there was some
"thing" (I don't know what to call it) on I think level 13 that appeared
as a bunch of characters --- it was _really_ fast, and I think I only got
to level 14 a couple of times, and level 15 once. Boy, that was a good game!

Hi folks!

I�ve promised my teacher to ask for an Atari - program.
This program should be used for MIDI music. The Atari is connected with a MIDI keyboard. The problem is I never owned an Atari and I don�t know where to get the software. Because it�s for school and it should free- or shareware. The second problem is I cannot imagine how to get the program on an Atari floppy. Because I only own a 3 1/2 floppy and the school Atari has an 5 1/4 floppy (even if the format is equal).
Does somone knows help? Please send me an information.

Thanks in advance.

>Journey to the Planets - These puzzles are hard to solve but not impossible.
> Not much replay after you solve it though.

When I first got the game, I hated it because it seemed too hard; my ship always crashed when I landed. Then once I got used to the gameplay, I enjoyed it quite a bit. So what if it had VCS quality graphics and sound (what do you expect for $8? <g>); I thought the strategy was what made it fun. Only problem was, I solved all but one of the planets. I believe it was the one with the funny "door," where "warped" you back to the spaceship area. I never knew what to do with the items; I always wound back to the beginning each time!

>that !!!! ;-))))

Not to start an argument but the Amiga 1000 went on sale Dec 12th 1985. I know because I bought the first one that was in the store. It had 256k. I later bought a sidecar for it with another 2 meg (besides the internal extra 256k I added) and a 20 meg hard drive. So buy Mid 86 I had a 2.5 meg Amiga 1000 with a 20 meg HD. I also owned an Atari ST and I do agree the Amiga was the best out of the two systems. However now I have sold both my Amiga and Atari ST systems and have only my Atari 8bit systems and my 3 PC clones.

3941. Favorite under-rated games?

I've been keeping my old 8 bits so I can play these great games, but there seems to be hope for the future. My son just bought a Sony Playstation and two games. One is called Crazy Ivan or something like that. The game is like a super version of Encounter. I love it! He also got a version of Wing Commander on it that reminds me a whole lot of Star Raiders. Yippee! Game play has returned that isn't confined to two participants beating on each other.

Never use recursion for something as simple as a loop to move memory. In fact, be very careful with using recursion routines on the 8 bits, because the stack can get beaten to a pulp in no time.

With the demos of PC Xformer (2.5 and 3.3) I've tried, roughly 75% of the
games I've tried (about 50 games so far) run and about 50% run correctly
(lacking sound, of course). This is in "800 mode" in XL mode, most games
just don't run.

I've got an 800XL right here to compare it to.

Most Atari 1040's (1040STFM or 1040STE) had a built in 3 1/2 inch floppy
drive. 5 1/4-inch drives were available, but they were mainly used to
read disks from IBM computers (the ST uses the MS-DOS disk format, but
it doesn't run MS-DOS programs).
If it is an ST computer, you might want to ask in comp.sys.atari.st.
Is it possible that what you have at school is an 800, 800XL or 130XE with
a 1050 floppy drive and some sort of MIDI adapter?
You can find files for either the 8-bit or ST computers at
ftp://amiga.archive.umich.edu , but it's a busy site, so you might need
some patience.

-
-I've got an 800XL right here to compare it to.
-

-
For a piece of software that is in rev 3.3, it doesn't work well at
all. It's more like 0.33, at least Xlit doesnt claim to work 100%, the
author is releasing 0.xx versions so he can get feedback - eventually
I feel he will nail it right on the head, and rather than blah blah
blah about emulators, why don't we all help him do it, especially the
more technically oriented of us. (I barely qualify for that!)

The sound doesn't work correctly anyway, so you're not missing much. Actually
the sound is a really bad joke. I agree with Yogi's ver .33 comment, that's
right on the money. By this time Xformer should run as well as that C64
emulator (which works nearly exactly the same as a C64, and isn't advertised
with false information). Xformer is still useless in my book.

Admittedly this does not really belong here, but...

If you don't want your children to see something on the internet - try taking
an interest in what they're doing or don't give them a damn computer, or don't
let them use your ISP, simple as that. If we had more parents in this country
who acted like parents and not potatoes, we wouldn't have to worry about such
things. The government is all too happy to do your thinking for you...

3955. MPP-1150 Parallel Printer Interface FOR TRADE

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-23 00:00:00 UTC
From: 6500dtpt@ucsbuxa.ucsb.edu
Message-ID: <4qitn1$2ce@ucsbuxa.ucsb.edu>
Source record: 82834

I have an MPP-1150 Parallel Printer Interface (in great shape, WITH instructions) available for trade. I'd be interested in trading for something for the Atari 8-bit or classic video game cartridges.

David Tipton

6500dtpt@ucsbuxa.ucsb.edu David Tipton

3956. Fore Sale: 800XL, 1040, modem, S/W, ...

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-23 00:00:00 UTC
From: alberth@mail.netrail.net
Message-ID: <alberth-2306961106170001@ppp-arl-1-13.netrail.net>
Source record: 82835

I tried this a few weeks ago in misc.forsale.computers.othersystems

---

After several years of sitting packed in my extra bedroom, I have finally
gotten up the gumption to part with my first computer. *sob* :-(

For Sale, please make an offer:

Atari 800XL Computer excellent condition
Atari 1050 Disk drive excellent condition
Wico stick Joystick (the really nice one)
300 baud Modem (yea, I know, but it cost $70 when I bought it...)

Lots of software (looks like about 4-5 disk-pack-organizers worth)
Including many store-bought games like Ultima II, III, IV,
Seven cities of gold, Racing Destruction Set, etc.

alberth@mail.netrail.net

Correct. It was 85, same year as the ST, and a year after the Mac.
I also believe it wasn't called the Amiga 1000 at the time, the 1000
was added later to distinguish it from the 500 and 2000.

Yes, actually, I am thinking of Pharoah's Curse, I could consistently
get 8 or 9 of the treasures before that bat/bird thing would stick me
somewhere well away from where I wanted to be. After about 2 or 3 times
in one game, I'd just quit and go back to Shamus or Fort Apocalypse.
This was before I got into ml programming and using disk doctor to "fix"
my games.

3962. Anyone want an ST?

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-23 00:00:00 UTC
From: "Waiting at Sudwerks"@bullwinkle.ucdavis.edu
Message-ID: <4qkgiq$m6m@mark.ucdavis.edu>
Source record: 82841

I've recently come into possession of an original 520ST (not STFM) with a disk drive, SC1224 monitor, ICD hard drive card (no hard drive), and about 100 different software titles, a lot of which still have their original packaging, including several INFOCOM games (w/cool stuff still in packaging). There is a problem somewhere in this setup, however, as sometimes I get nothing but bombs when I boot up the computer, and about 50% of the time the drive doesn't acknowledge the computer. All this aside, if anyone actually wants this stuff, e-mail me, and I will send you a list of the software titles. I only ask for someone to cover shipping, plus a small amount for the monitor (what do you think is fair?), and that you take it all, as I'd rather get rid of it all.

Also, please be patient if you request a list and it takes a few days. I no longer have a computer w/modem in my house, so I have to wait until I'm at work or on campus to check my mail.

Almost right......it's 16 treasures.....I could never beat it as a 5 year old
and I played it so much the tape went on me....It took me 7 years to find
another copy of it. Now I can beat all three difficulty levels but still
enjoy playing it

From: greywolf@Traveller.com
Message-ID: <4qmfnk$jh8@tsunami.traveller.com>
Source record: 82662

Steve or someone else with a Pro Cable that could Ohm it out,

I'm building your APE PRO cable and the SIO Colors you say to
connect in your list below are the wrong pins on my cable.
I don't even have a purple on my sio cable from Atari, one that
came with a 1010 tape drive. Help! I need the SIO pin numbers so
I can connect the SIO cable Side of the (Pro-System Cable).
I have the SIO Computer Port pin numbers and names listed below for your
convience. Please, I really like the APE and suggest you use SIO
pin numbers in your HTML docs, colors are not reliable. I know
nothing about electronics but I can follow instructions and soldier.

This is what my 130XE manual list them as looking at the SIO port
on the computer...remember if you are looking at the cable side
pins are reversed. :)

```

I would mention SpinDizzy and the BoulderDash series -- but are these "little known?" Seems they might be too "classic" for this thread. ;-) (All I know is that I played them for several MONTHS straight, apiece, back in college, '82-'83 timeframe.)

For what it's worth, some of us -- and probably a higher percentage here in the Atari 8-bit group, especially if some folks are actually USING their Ataris to read this -- can't handle inlined MIME-format attachments in News. I'm one of 'em. So, don't "attach" them. "Embed/include/import" them, as a not-specially-formatted part of the plain text of your message.

Remember: on the Net, everybody's screen looks different, even if you think they ought to look the same.

Stick to the "lowest common denominator" of formatting, to reach the widest possible audience.

Yes, it was. I remember someone from this group SnailMailing me a floppy
containing Rampage. On one side was the best he'd been able to do toward
removing the copy-protection as of the time he'd talked to me on the Net, and
on the other was the fully-de-protected version he'd managed to finish
before actually mailing me the disk.

I don't know where that disk is today, though.

Although the R: device typically refered to the Atari 850, (or P:R:/ MIO)
There are some drivers which turn direct-connect Atari modems into
R: devices, allowing you to use programs written with the 850 in mind,
a good example is 850 Express, there was a R: driver for that and
the SX212 modem, the driver was actually a patch that even changed the
title screen to SX212 Express.

If you have an Atari 850 or ICD P:R: connection then all you need is the
AUTORUN.SYS from any Atari DOS 2 or 2.5 disk. This will load the R:
handler from the device.

Hi all!

I recently got a used 800XL and everything seems to work ok, except no matter what I do I can't get any sound. I tried the self test and see the notes for all 4 voices appear on the screen, but there is no sound.. If I turn up the TV volume all I hear is the regular hum associated with the tv.

Is it broken? How can I get it fixed? I live in the Denver, Colorado area.

: I don't even have a purple on my sio cable from Atari, one that
: came with a 1010 tape drive. Help! I need the SIO pin numbers so
: I can connect the SIO cable Side of the (Pro-System Cable).
: I have the SIO Computer Port pin numbers and names listed below for your
: convience. Please, I really like the APE and suggest you use SIO
: pin numbers in your HTML docs, colors are not reliable. I know
: nothing about electronics but I can follow instructions and soldier.

I had the same problem when I used a SIO cable that came with my Percom drive. You can solve this problem in one of two ways:

1. If the plug end of your SIO cable has a screw, try unscrewing it and looking inside to see which wires are connected to which pins. You might find that the wires are not connected to the right pins for building the PRO cable. I found that this was the case with a SIO cable that I had cut from a 410 program recorder. I think that the Atari cables are very hard to rewire without special tools.

2. [The method I used] Borrow or buy a voltmeter with built-in continuity check. That way you can attach one test lead to a SIO wire and use the other to probe each hole on the SIO plug (actually, grab a spare wire and wrap one end of it around the probe and stick the other end in the SIO holes; the test probe is sometimes too large to fit in the SIO holes). That way you can figure out which wires go to which holes. I bought a nice one at Radio Shack for about $30. Heck, maybe you could build your own continuity checker with a small light bulb, wires and a battery :)

Posted & mailed.

3994. HELP:RF Converter Box

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-24 00:00:00 UTC
From: Rich Tirico <"results@results"@interpoint.net>
Message-ID: <4qnjk2$5oi@taz.interpoint.net>
Source record: 82685

Does Anybody know of something better to use than an RF converter box from Radio Shack for the video on my 130XE? I have 3 RF boxes, and they all aren't as clear (static flows in and out, and the refresh rate is all messed up) as I'd like them to be! Everything I try to hook into these has problems, My 2600, Commodore64, etc.!! I have an RCA video input in the back of my TV, Is there anyway to surpass the converter box?, and plug straight into the RCA jack? or Maybe something I can build for a better signal? Or hell, maybe I can hook up a PC monitor to it?

If anyone has any advice or has done anything like this, Please Help.

Thanks!
-Rich.

Hmmmm, must be a different cable than I have. Mine consists of u-shaped tabs - the ones that had wires in them (before I pulled the wires out) had the u-shaped tabs clamped down. Each tab is recessed within the plastic housing, and impossible for me to clamp the wires with ordinary tools (tweezers, very small screwdrivers, etc.). I don't imagine soldering would work - would probably melt the plastic, and no room in there to work, way too small for the soldering tip to make contact with the tab.

Radio Shack also sells a connector that allows you to plug the normal phono plug into it, and it screws into the 75 ohm F connection on the TV as long as you have one. (It's a standard cable connector as opposed to the twin lead 300 ohm connection used for some antennas). I haven't used one of those switchboxes in years. If you need to be able to switch still, buy a quality 75 ohm switchbox. It has 2-3 F inputs and 1 F output.

Hello,

I was going through my old collection of COMPUTE! magazines, and ran across a program that looked pretty useful called Atari DOS switcher in the Dec. 86 issue. Unfortunately, the listing is incomplete. Does anybody have this program or know if COMPUTE! ever published the rest of the program?

The Dec 86 issue was my last issue.

Thanks

Kevin

hi, I just got hold of Flickerterm (using VT100 term right now) and can't get it to work. The docs say I need an R: handler. What the hell is that? Ive run Bobterm, this VT100 80col term, Express 850(for the sx212) but can't find any handlers that will run it. Would it be too much to expect one in the .ARC file or what?
Still no luck finding a downloadable kermit-65 pgm, one solid offer though so all is not lost...

randy.

An R: handler is the program that tells the computer how to connect with your serial interface. The Bobterm ARC file should include at least wo or three different COM files, one of which you rename to RS232.COM. You mentioned using the SX212 version of Express; if you have an SX212 modem, you can use the RVERTER.COM handler.

An r: handler is a device handler for an RS-232 device, like the P:R:
Connection, MIO, or Atari 850 Interface. In order to use Flickerterm (I
can't quite remember) I think you HAVE to have one of teh above devices
and a modem that uses an RS-232 port (ie any Hayes-compatible external modem
not made by Atari (except the SX212)). You might be able to use an SX212
through the Atari port, but I'm not sure..

I think the drivers come with Bobterm.. one named PR.COM or something..

From what I saw of a MIME base-64 e-mail message sent to me, it is
NOT an attachment as in binary file attachment to e-mail. It is an
encoded include within the message, sorta like UUEncoding a file then
including it in the e-mail message. Binary attachments are files that
don't have anything to do with the message except that it/they are sent
along with the message. They don't get encoded, you detach the binary
file and use it. It could be ZIPped, ARCed, LZHed , etc., but they are
not seen as part of the e-mail message proper.

Bobterm as well as all other terminal programs require an R:
handler. It sa a machine language routing that gets info from you and
puts it byte by byte to the RS323 port (R: device). It also gets info
from the R: device and sends it to you. It is a program that allows
communication between the computer and the port tha handles the serial
information. Bobterm has a few different handlers with it. You use the
one for the device you are using.

Wow, an assembler that understands scheme! :-)

>I'm sure I should be using recursion somewhere to achieve this.

That's because you're conditioned by scheme/lisp....
You never use recursion in assembly (OK, I'm sure someone does, but
I've never seen it), and it's best to avoid it if possible unless
you're using a language that is designed for it (scheme).

I'd just do a simple loop. I think you were on the right track,
although you may need to specify exactly what "largish" means.
You might consider using the Y register to keep track of the page
you're on. (Though I'm a bit rusty on 6502 assembly myself.)

No. An attachment is part of the article; MIME is the format for
attaching it. Most newsreaders do not understand MIME, although most
mail programs these days do. (MIME was intended for mail, not news.)

> They don't get encoded, you detach the binary
>file and use it. It could be ZIPped, ARCed, LZHed , etc., but they are
>not seen as part of the e-mail message proper.

They NEED to be encoded to be attached and sent as a message. Whether
or not they are seen as part of the message depends on whether your
reading software understand MIME (or that MIME type). If your
software knows MIME, you actually see the processed version of the
message, and you don't see the way it is really sent.

Please, people, don't use MIME attachments in news posts.

The mere thought of doing recursion in 6502 assembly gives me a headache.
Besides wouldn't the overhead associated with it defeat the purpose of
using a low level language?

I'm gonna sneak this in and make it slightly on topic.
I just put Red Hat Linux 3.0.3, kernel 1.2.13 on swap and
linux partitions on my i486. Uhmm... I know a bunch of you
are unix smart, how about pointing me to a SIMPLE faq on,
like, dang. I mean it boots up linux and I have to login to
my own machine and I don't have a password. I entered a
password when I installed Red Hat, but I don't know how to
get it to ask me for that 'superuser' (I guess) password. I
wanna run a xterm that's supposed to be like Procomm Plus,
(that and a bunch of stuff is already there in xwindows, I
just don't know how to get at it.) On topic, it feels evil
to be avoiding MSDOS. Theres a ton of unix usenet groups and
I'm tired of wading thru tons of stuff. Everything I have
about linux seems to assume you know unix (6 cds, what's
that? about 3 gigs of stuff?) Ataris also give me the thrill
of not doing msdos. There I'm on topic. Thanks (I think,
like e-mail stuff about linux.)

American Techna-Vision has a large number of Supra MicroPrint Interfaces and 13 Pin Serial I/O Cables for Sale. The Parallel Printer Interfaces are $14.95 each or (2) for $20.00. These units will allow you to connect a standard parallel printer to any model of Atari 8-bit computer. The serial I/O cables with the unique trapazoid 13 pin connectors are $1.50 each or (10) for $10.00. We also stock replacement power supplies for all models. Add $6.00 for shipping and handling to the above. American Techna-Vision was established in 1973 and we can be reached during business hour at 510-352-3787 or reply via EMAIL. Sincerely - Ralph Maddox for American Techna-Vision.

Attention Dealers: Attractive quantity discounts are available on the above items.

The 130XE has a monitor port on the back, if you can find the
proper cable, you should be able to plug the other end into the RCA
input on your TV. (or VCR) That'll give you a clearer and more stable
picture.

Forget about using a PC monitor though, I don't think there's a way
to do that.

4025. APE cable noise....help!

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-25 00:00:00 UTC
From: Paul Gallier <panther@strangeworld.com>
Message-ID: <31CFFB09.162D@strangeworld.com>
Source record: 82707

Well, I built an APE cable and it works pretty well except for one problem: I get a rather obnoxious buzzing sound from my monitor's speaker even with the power to the Atari and PC turned off. It's apparently coming through the ground somehow. If I disconnect the power cables to the PC (including the monitor) then there's no noise (but that hinders the functionality of the entire system). I've even tried plugging everything in to the same power source with the same results. Anybody?

>the tab.

I'm not talking about taking the wires themselves out of the metal
contacts tabs. I'm talking about taking the entire contacts out of
the plastic, without breaking anything. The metal contacts have
little tiny tabs on one side that lock them into the plastic. On each
side of the plastic housing, you can see spaces where the metal shows
through; that's where the little tab is.

Here's the *removable* metal contact, with wire attached:

```
locking
tab
wire clamp _

Hi,

Question:
If someone has mailed me an ATARI file and I recieved/UUDEcoded it with my PC, what if any utility can I use to make an .ATR or .DCM immage? I just got my SIO2PC cable up and running have started to use APE (I will register Steve!). So, if someone sent me the .COM or .EXE file, is there an IBM program such as APE that will make this an image or somehow enable the Atari to read it from my PC? Thanks.

Go back to radio snack and get a Female RCA -> Male Coax adapter, you
can them plug the RF cable directly into the antenna/cable input for
a excellent picture.

4033. CD- ROM alternative

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-25 00:00:00 UTC
From: glennb <glennb@interport.net>
Message-ID: <31D03E85.2DC8@interport.net>
Source record: 82715

I know there is a project going on to archive/preserve ATARI software on CD-ROM, I fully applaud this venture. In conjunction with this, I think we can take this a step further, which I'd be happy to offer my assistance with.

Currently, A Zip disk can hold 100 Meg. uncompressed. Now, this isn't quite the capacity of the 600 plus MB of a CD-ROM, but considering the size of Atari images it might be very well adequate. Since you can "write" to the disk, distribution would be easy since it wouldn't have to be pressed. Duplicating the ZIP disk is a breeze. I know a lot more people have CD-ROMS on their PCs than ZIP drives, however ZIP drives are getting increasinly popular. They wont supplant CD-ROMS (not the intention) rather are a high capacity portable/storage device that acts like a floppy disk. My guess is the blank media is roughly the same price (although I think Zip blank disks will be going down in price) so the cost would be about the same.

Just another alternative to chew on.

Well George, MR. Mihocka mailed out instructions on how to make one of these cables for yourself. It is a very easy project, and I had all the parts on hand. It took me all of 10 minutes to make.

Now, when I e-mailed Darek for an UPGRADE to v3.5 of PCXformer, since I AM (or WAS) a registered purchaser of v3.31 ... you know what happened??? He called me a cheap #!@%$&*#@!$ for building my own cable! After HE sent out the instructions! After more of his foul diatribe, he wound up by deleting me from the "official Registered USERs" list (and from further access to the download page on the internet, by the way).

Anyone who wants the instructions, I can photo copy them or make a JPG file of it, and email it to you. However, YOU'LL have to deal with "Dastardly Darek" on your own ...

Good luck

Bill

Hey, yeah! I've always loved Xagon, don't know where I got it, didn't know where it originated until you guys just now discussed it! I also didn't know you could "spring" other platforms as you've described, and I've never seen levels beyond about 3 or 4 (I'm not that good at it). Unfortunately, the last time I played it -- just a few days ago, actually! -- there was a problem in that one of the characters (players, as in player/missile graphics) periodically sprang into the wrong "width" mode and didn't fit the board, his own shadow, etc. -- and was very difficult to position accurately because his "center" was visually in the wrong place! I hope my copy hasn't become corrupted; are there hardware or OS model/version dependencies in Xagon? I.e. must it be run on an 800 and not an 800XL, or that sort of thing?

Chris

Si...yo tambien soy un nostalgico de los 8 bits. Me pasaba horas en
las noches haciendo rutinas en Assembler que no hicieran nada...
Para todos los nostalgicos: Creo que existe el emulador para Pc
del Atari. Se llama Xformer, y ya va en la version 3.0. Incluso, soporta
player-missiles, 4 canales de sonido via soundblaster, todos los modos de
resolucion grafica y deteccion de joystick. (esa es la pomada que vende el
shareware)

Just upped the following to the new 'Justin's archive' on
ftp2.cyberspy.com

roms.zip - a few cartridge images, gridrunner, galaxians, defender. I
believe that the forthcoming new release of XL-It! will let you mess
about with these.

warhawk.zip - an ED .atr named rockford.atr on a RobC menu with some
games, specifically warhawk which I haven't seen around before. It's
a good blaster. Also an Othello game and Rockford's Revenge.

I put them in /pub/incoming but they may have been moved when you get
there.

cc'ed to the archive maintainer by email (if I got the address right).

Did you get the box or just the board for the box? The 1090 was never
really released (that I know of) but a few are around.

4043. How do I convert ATR files?

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-25 00:00:00 UTC
From: qmnmaren@dingo.cc.uq.oz.au
Message-ID: <4qpp53$1c8@hobyah.cc.uq.oz.au>
Source record: 82725

Can anyone teel me how to convert an ATR file back into a bootable Atari 800 disk?

How about being able to extract the individual files from an ATR file to be downloaded to an actual atari via the Rverter Serial cable?

Nick

4044. Re: WTB: PC Xformer cable to connect 1050 to PC

It is rather unusual for Darek to complain about someone building
their own XFormer cable.

When I spoke to him by phone in April, to order the XFormer CD-ROM
AND his XFormer cable, he said he was out of stock on the cables and
he did not want to build any more of them. It was too much trouble. He
said there would soon be cable instructions on his web home page.

Go figure???

Hi all.

I'm in dire need of the R: handler and associated files from the disk
that comes with the R-time8 cartridge from ICD. I bought one from FTe
(NOT RECOMMENDED) over a year ago and have never recieved this disk. I
really need it for a specific business (yes an 8bit in business) project
that is now incredibly late. If anyone has this disk please reply to me.

P.S. I need the atari dos/mydos version *NOT* the spartados version.

Thanks,
James

HD interfaces are easy to come by... take your pick KP Interface(Supra),
Black Box, ICD's MIO, otherwise HD mechs are a little scarce... An alternate
route is the APE and PRO interfaces which use PC compatible as storage for
8 bit....

Did anybody remember the last year atari showed the 8
> : bit line at the C.E.S. show in Vegas. They had a portable 800 with a
> : gui program (ie. windows).

GUI is nice if you have horsepower... I have always felt that GUI you traded
'power for pretty'. Actually, what the 8 bit needs ia a text-type dos shell
that is similiar to the PC's Norton Commander (move/copy between subdirs,
compress/decompress/DCM files, view text files, delete marked files,
optimize, backup, utils, etc...) If there is something similiar please some
one correct me..

I _think_ this was the CP/M expansion box that plugged into the 800XL's
expansion ("parallel") port. So far as I know, only a few preproduction
units ever made it out the door before it was axed.

From your atari+disk drive attach a Sio2PC cable and run the Sio2PC
software on your PC. This software will enable you to select the ATR image
as D2:. Load a disk copier into your atari and simply copy D2: to D:.

I had a Sio2PC cable made up for me for 20UKP and the software is free
so this is a very cheap way of doing it.

>
> How about being able to extract the individual files from an ATR file to

*ImageMan can extract individual AtariDOS and MyDOS files from ATRs Images

*Boot2DOS can extract single load files from Boot disks, RobC disks and Jon W
multiboot disks.

Both of these utilities are free and can be obtained from the URL below.

From: jeking@xmission.com
Message-ID: <4qr70o$chs@news.xmission.com>
Source record: 82742

Odd problem creeped up on me yesterrday. Before I moved, SIO2PC and APE
worked fine.. but now that I've settled in my new place, APE no longer
functions and SIO2PC only allows me to transfer a file rom my Atari to
my PC via file2pc.com. If I try to copy files directly to an ATR image,
I get an error on the Atari and can see tha I'm at least hitting the PC,
as I get a response on SIO2PC software, but not APE.

Anybody hae any ideas?

We've replace our peecee with Macs, but when we had the peecee I had it setup to boot either DOS, OS/2 or Linux. Quite cool. I only used DOS to play games, because (to my chagrin) when it comes to contemporary gaming, it's either Wintel or Die. It sucks hearing about these cool new games coming out which I can't play because I have a better machine (IMO, to avoid OS holy wars).

I use an old joystick cord plugged into my 8-bit. I then write a little
basic program:
10 print stick(0)
20 goto 10

and then I can use the wires coming out of the joystick cable. Works
really well as a continuity tester.

Message-ID: <31d1a9fb.6451380@nntp.alaska.net>
Source record: 82749

Hello....

Well I am normally only a Commie user, but in my search for commie stuff I have come across quite a bit of Atari stuff, most of it quite interesting and I love learning a new 8-bit machine...

My newest find was an Atari 800 and an Atari 850... And this is what I have a question about...

What is it??? As much as I can figure, you plug this thing in instead of your drives, and it gives you 4 serial ports and a parallel port... Am I right? Can you have drives plugged in at the same time?? What is it used for???

Any help would be appreciated...

>"Damnit!". :-)

Actually Atari's stock is now down to the 5.00 range. Also as for the 50 to 12.75 per share it was like 1.10 to 12.75. It never closed at less than 1.00 Also my opinion of why their stock went so hi is mostly because the Tramiels played up the idea that IBM would be making the Jagar and there were many rumors that IBM and Atari might be joining in more projects. Once the dust settled and everyone became aware that IBM did only one run of Jaguar units and was "not interested" in any further joint projects The stock started to decline.

As far as Atari's stock goes now well its hard to say. Maybe it will drop on down to 1.00 or maybe at the point of the merger it will soar. As of closing yesterday it was at 5.125 per share. It got down as low as 5.00 during the day. For those that did not sell at 9.00 a share a month ago they probably wish they had. Maybe next month it will be at 11.00 regardless Atari as the company we knew is gone, just another victim to poor management at the top.

Of course I may be a bit over-zealous, but I would not part with any of that stuff. Especially if the two 1050's are working. It is hard to find good ones.

If you are really fixed for cash, all that will not bring in more than $200.00 ???

I would just keep it and have fun with it for many more decades!!!

I have tried running HARDBALL.ATR with the PC-XFormer ver 3.5

The opening screen loads and looks great!

The problems start at the next screen. The game selection bar will not move down beyond the first two choices. The right side of this screen is messed up. The game will not respond to keyboard or joystick input.

I have not tried this with XL-IT. Anybody ?????

Does anyone remember M.U.L.E. for the Atari 800? This was the greatist game ever and basically the reason why I still keep my Atari 800 hooked up. That would be a great game to play over the modem (if that were possible). it was sort of like a futuristic monopoly type game where you bought plots of land and produced stuff on them and then tried to sell them at auctions. They don't mak'em like that any more <SIGH>...

From: dchea@nyc.pipeline.com
Message-ID: <4qt25q$3ie@news1.t1.usa.pipeline.com>
Source record: 82750

Does anyone know if Hardball can run on any of the current Atari 8-bit emulators? I have lost track of all the latest happenings on the Atari side since I have been doodling with the C64 emulators. For some reason Hardball on the C64 isn't as good on the Atari. Then again, I haven't played the Atari version for almost a decade now so maybe I really can't remember.

Any info would be appreciated.

-David

Hey Dave, if youve got some space trouble with your files on your provider, I invite you to send the files over to my site. I run the ISP myself, so no restrictions.

Ill extend that offer to anyone who wants to archive their 8 bit stuff. If you want to set up a directory for your files on my ftp server, just email me and Ill make space for you. I recently posted the contents of Justins archive to the server and the response has been fantastic. Thanks to everyone for the kind words.

See ya, Joe

It was fun until it got too easy. <g> I played through the levels like three or four times before getting bored to tears. Certainly one of the best martial arts games made, however. Loved how the Yamo bellowed.

> Tapper!

More of a classic than underrated, but I never got past the alien bar. The colors were poorly done that I couldn't judge how many beers to do, or if I needed to serve more or less! It always resulted in the loss of a guy.

> I used to have this great game but I can't remember what it was called -

>- you played Santa Claus and you had to deliver presents whilt flying your

Ah, yes...another obscure classic. If memory serves, it was "Special Delivery." Cute little game. Never got the timing down pat, much less avoided the obstacles, but I enjoyed it well enough. There was a fun balloon game (don't remember if it was the same company, but it had a similar style) called "Up, Up, and Away" that was neat.

There was a version made, but I never saw it either. <g> It came out like ten years (?) ago, might have been less. Anyway, from what people said about the game, it was pretty awesome -- far better graphics and sound than the Nintendo counterpart that was out the same time. I only saw a pic of it, which was far as I knew of the game's existence.... (I'm sheepish to admit that I know little more of what the game is about!)

Big John's "NO BULLSHIT" Auction

UPDATE #1 6/27/96

Tired of seeing auction posts claiming "loads of Rare and
Extremely Rare carts" and then seeing crap like Pitfall 2,
Bowling, and Demons to Diamonds?

Then this is the auction for you! No rarity listings telling you
a cart is UR when you consider it Uncommon at best. No
complex bidding gimmicks. Something for everyone. No
hassles. No problems. No BS!

Standard rules are listed at the end of the auction. Please
read them before bidding. Updates will be made daily in
e-mail, less frequently in the newsgroups. If you have any
questions, please feel free to e-mail me.

On to the goodies. Enjoy!

- Cosmic Swarm (Atari 2600) $30 WDV
(by Commavid, New in Box,
Mint Condition)

- Super Cobra (Intellivision) $40 kujo
(by Parker Bros., New in Box,
Shrinkwrapped)

- RCA Studio 2 system $10 WDV
w/ Blackjack cartridge
(untested, no power supply/switchbox)

- Prototype Moon Patrol cart $20 WDV
(Atarisoft for the C=64)
label reads: Commodore 64
Moon Patrol
Atari Inc. Proprietary
Serial No. 92
1983 Atari, Inc. All Rights Reserved

- Intellivision ECS Keyboard $25 WDV
(rare, brown version. PAL,
220V. Complete.)

- Emerson Arcadia 2001 w/ $15 DonR
2 carts (Missile War & Alien
Invaders) Complete.

- Atari 2800 Cookie Monster $40 WDV
Munch (New in Box, Shrink-
wrapped). This is a beauty. All Japanese writing
and Atari 2800 logo. I've only seen two of these
and I'm keeping the other one.

- Amiga Joyboard (2600) $10 WDV
(compatible with Mogul Maniac,
Surf's Up, and Off Your Rocker)

- Demond Attack (2600) $15 DonR
(NTSC, unknown origin)
Not a mistake on my part, there is a "D" at the
end of Demon. Completely different artwork than
the Imagic release.

- Tutankham (Intellivision) $30 WDV
(by Parker Bros., New in Box,
Shrinkwrapped)

- Prototype Swordquest: $25 WDV
Earthworld cart (Atari)
Standard loaner cart label.
Cart reads: Adventure II, which is crossed out
and has Swordquest written beneath it.

- Frankenstein's Monster (2600) $25 WDV
(Prototype/New Release cart)
Cart has red label w/ Data Age logo and serial
no. 0123. Also has copyright info and "Please
return to Data Age" text. Cart has slight wear
and screwholes.

RULES
****

1. Auction runs until July 9, at which time it will
change to a Once, Twice, Sold format.

2. Minimum bid increments are as follows:
-- $1 on items up to $20
-- $2 on items over $20
-- $5 on items over $100

3. In case of a tie, the first bid that I receive will
be designated as the high bid.

4. Payment is to be by personal check or money
order. Shipping will be based on what you win.
I will send shipping info with your winning total.
If you have questions about shipping, please
e-mail me.

5. I reserve the right to stop this auction, alter the
rules, withdraw items for trade, or make any

other changes for any reason.

6. Send bids or requests to be added to the
mailing list to jhardie@usa.pipeline.com

Thanks for reading and good luck!

4088. Translators for XL & XE ->800

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-28 00:00:00 UTC
From: DougF@gnn.com
Message-ID: <4qvmqp$nub@news-e2b.gnn.com>
Source record: 82621

This has always been a tricky topic. For years, I have been using a file called: XL-FIX . I just sent this utility as an ATR image file to the cyberspy ftp site. You load in the program, switch disks or images, and then press RETURN.

But, I always wondered if there was a better / easier way to load old game disks / files with the "newer" :) XL & XE Ataris?

I do have the original TRANSLATOR DISK from Atari, stashed in a box somewhere. But, I never used that too much.....

Any comments from game gurus out there ?????

Happy Computing, from Doug Feldman in Ann Arbor, MI

The 1090 XL Expansion System was designed to plug into the PBI connector on the back of 600XL, 800XL, 1400XL, and 1450XLD computers. The expansion system added a number of options, not the least of which was five slots which would accept plug in cards.

There was rumored to be 80 columns adaptors, Apple][e cards, C-64 cards, and IBM PC cards under development for it. Warner pulled the plug before the project really hit its stride -- the expasion system was done, but there were no cards for it. Its really too bad, the high-end XLs would have better established Atari in the 8-bit market.

-Michael ELlis

4094. ALEX PIGNATO

Tell me about it..... The thing is, I just did a module on my degree using Scheme, and now I can't knock all these crazy algorithms and methods out of my head. What a crazy language. You have to read the program flow from the inside out, like peeling the skins off an onion. I think it's sent me slightly crazy actually.

Hello!

I forget if I posted about this awhile back so forgive me if I did.

Has anyone ever used or know where I could get Virtuoso Desktop
--something-- Software from Virtusonics?

You could make animated displays with music, etc.

Thanks for any info!

Go for it at following URL:

ftp://ftp2.cyberspy.com/pub/atari

There are tons of 8bit atari games

Enjoy!

4100. Re: Strange Atari 8bit carts /questions??

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-28 00:00:00 UTC
From: ebrunne@orion.it.luc.edu
Message-ID: <4r1a8n$gaf@artemis.it.luc.edu>
Source record: 82633
Cross-posted to: rec.games.video.classic,comp.sys.atari.8bit

I got the rest of the 'loaner carts' today in the thrift where i found
these. I just want to see if anyone on c.s.a.8bit can identify LSI (or
LCSI) corporation and where it was located...

Here's the rundown on the new ones:

handwritten on label: Star Raiders
(on the back: LSI LAB)

Atari Artist
(c) 1983 Atari Inc.
REV #5
SERIAL #45

Telelink II
(c) 1982 Atari Inc.
REV #5 (5 crossed out and 6 written in ink next to it)
printed across the bottom of label: Mem (misc?) used source

Tennis
(c) 1983 Atari Inc
REV #2
SERIAL #5
(across the top, in place of the left cartridge sticker, this one has
another printed label which reads:
TENNIS
QUALIFICATION SAMPLE
REV. 2, 1983)

and finally one blank, labelless cart. I can't wait to plug this in and
see what it is!

c.s.a.8bitters please read the rest of this post, and respond if you have
any info that might help me identify where these carts came from and
their history... I'm very keen to find out...

Ted B

Edward A. Brunner (ebrunne@orion.it.luc.edu) wrote:
: I found a bunch of atari 8bit carts that are definitely not standard
: releases, but i dont think that they are proto's either. Maybe someone
: here will recognize them.

: They are all in standard Atari cart, but they clearly never had a regular
: label (no glue traces). Each has a computer sticker on them with
: printing that looks like it was done by an 8bit printer. Here's the text

: from each of them:

: Super Breakout
: (c) 1983 Atari inc
: REV #A
: SERIAL #78

: Centipede
: (c) 1983 atari inc
: REV #A

: Assembler/Editor
: (c) 1983 atari inc
: REV #B

: Atari Logo (ben Hayword, handwritten across top)
: (c) LCSI 1983
: REV #13
: SERIAL # 8
: (C656, handwritten across bottom)

: Super Salt
: 3.03
: 400/800
: (this one is all handwritten)

: Anyone have a clue about theses?

I recall seeing an ad for an IBM PC expansion card several years ago
in Compute. Was it vaporware, or did it actually get released?
Also, I have a 1027 printer. Needs a new ink thing and the print
wheel is getting there too. Anyone know where I can pick these up, or
if they even can be picked up? I also would like to know if there are
any Atari mailing lists.

There were prototype cards produced for the 1090XL, just not in any quantity. The memory cards are hard enough to find, the others are near impossible.

DB>
DB> Go figure???

From what I have heard on this SIG Derek has mental problems.....My uncle
bought PCXFormer 3.3....Didn't work, gave it too me.....Tried it on three
different computers and 2 out of three had sound, the modem would only connect
at 300 baud, and the joystick didn't work on any of them..

Derek Mihocka's software is a ripoff and he will get NO business from me or my
uncle.

In fact, he almost bought GEMulator but when Xformer didn't work he quickly
decided against it!

Reply to Rick Ziegler
About your PC <-> Atari cable "acting up".

I discovered something interesting when using my APE (1 chip) cable
and a Sparta DOS image to boot my Atari. Latger on in that same session,
i wanted to write to a real Atari disk on my real 1050 drive. So I just
turned the power on to that drive and it instantly became drive 1. I had
a Sparta DOS formatted disk in drive 1. But, I could not write to it or
read from it!!!

I remember reading something about booting a disk drive with Sparta
DOS actually "initializes" the drive for Sparta DOS I/O communications.
I don't think this special "boot-up" is necessary for standard single
density atari disks.

Any other comments ????

I've seen the 1090 expansion cage many times over the years, because I've been priveleged to attend user group meetings at which collectors like John Hardie and Curtis Vendel were present.

IMHO, the 1090, combined with a 1450XLD, would have opened the education market to Atari and blown Apple out. Either Atari or Commodore, by using coprocessors for sound and graphics, and decent screen editors, would have been naturals in the classroom. In fact, while Atari was never big in NYC public schools, Commodore did get a chance. Unfortunately, the hardware didn't stand up. Ataris might very well have.

SIO2PC from 3.19 on had two versions. One was for the one-chip cable and the other for the 2-chip cable. The byte count on both executable files was the same, but the filename for the 2-chip cable ended in a 2. APE should recognize both cables, but you have to configure it for each from the configuration menu. Beyond that, I couldn't say what's happening unless I see it.

Last time I checked, American Technavision had some of these. They were (I think) $9.95 each or considerably less per piece in packs of 5. I don't remember the phone number; anyone have it?

It starts with area code 510. I can help that much, if no one else has the number and you need to call 555-1212 for information.

4115. FS/T: Atari 8-bit computer items [06/29/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-29 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4r45b8$f78@dfw-ixnews5.ix.netcom.com>
Source record: 82521

All VGA FS/T lists are updated weekly and are available on the WWW at
http://www.io.com/~vga2000/

This list was last updated on 06/25/96

NOTE: Screen shots of some of these games are available on my
web site.

I have the following Atari 8-bit software and hardware for sale or
trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. For faster service, please
include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
given priority (especially if the trade offer overwhelms me).
I collect for over 40 different systems, so please feel free
to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed.

5) No package deals on games or systems. All prices are clearly
listed.

6) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. My personal
philosophy is that something is only worth what someone is
willing to pay for it.

7) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted.

8) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 6.00 Atariwriter
$ 5.00 Basic -- for the 400 and 800
$ 6.00 Basketball
$10.00 Delta Drawing (Spinnaker)
$ 7.50 Deluxe Invaders (Roklan)
$10.00 Jumbo Jet Pilot (Thorn EMI)
$10.00 Kids on Keys (Spinnaker)
$10.00 River Raid (Activision)

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1200XL COMPUTER.

This item has not been tested.

$19.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #3

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$32.00

*****

LOT #5

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 9.00

*****

LOT #6

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$24.00

*****

LOT #7

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$29.00

*****

To reserve an item listed here, please contact me.

Please include a list of the items that you are interested in,
and your full postal mailing address. Thank you!

BEWARE of Terry Ortman!!!!!! Check out 100s of emails complaining about him on misc.forsale.computer.storage.

The MO seems to be:

1) I take your money
2) the distibutor didn't ship or some other excuse
3) I keep your money because becuase it isn't my fault and I need it to sue the distributor
4) Then (can you beleive this) I am going to sue you because your are complaining about a refund and since your own me for the law suit I am keeping your maoney and you are never getting the goods you ordered!

For real folks check out his emails!!!!

---------- ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00.

Supra External 2400 Baud Modem, includes powewr supply, no manual, Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE BADLY someone has to have one, or a trak double-sided slave drive. MAKE OFFERS!!

DO NOT reply unless you are making a serious offer!!

NOTE: One of the people who said my price of $135.00 for the ATR8000 package was TOO HIGH, turned around and tried to sell someone who contacted me, the same system, without cables, software, etc., just the ATR8000, dual drives, and an Auto-Term Cart, for $150.00......

If you can FIND them LOWER priced elsewhere, and are NOT going to make an OFFER, then buy them from somewhere else....

A lot of this stuff is being SOLD on consignment, as the LAST remaining ATARI Software Company in this city, let alone maybe the entire state, I often get a load of equipment to sell for the people, and usually end up having to buy it from them, since it takes forever to sometimes sell the equipment....

On another NOTE, ATARI has been bought by another company, who is dropping the ATARI name, and will concentrate on the GAME business, so the Atari computers, etc., will become harder to find....

Anyone interested, we will make our software catalog available, and may even put all the 200+ MEGS of Atari Software we have accumulated over the years on a CD-ROM for BBSes to support the Ancient 8-bit Atari computers....

I've seen the ATARI 8-Bit FAQ, nice to see all Atari vendors mentioned, and our name, address, goes unpublished.... We were commonly seen in ANTIC, ANALOG, and recommended by Bill Wilkinson and others of OSS, as to the quality of our software....

The LAST Commercial Title we released was a USPS BARCODER for ATARI Printers, to print the USPS BARCODE on your address labels, to speed up processing, and qualify for PreSorted Discounts... Barcodes have been Approved by the US POSTMASTER at the Post Office, and the package supports USPS 5 Digit Barcodes, 9 Digit Barcodes, and the 11 Digit Delivery Point Barcodes, which it automatically computes and prints out on every 9 digit barcode. For those who don't know, the 5 digit code identifies city and state, the 9 digit will take you to the exact address street, and the 11 point will pre-sort and route the letter to the exact location, on the proper side of the street, etc., and according to the USPS, if the letter just has the 11-digit barcode it will be delivered to the proper address.... Price is $25.00, and is available on 5.25 inch floppies for the Atari 8-bit computers,a nd will run on any 48K or greater machine.....

-Hiya all,
-
-ok well this post is mainly aimed at Yogi - he's asking for FTP
space,
-well why not up your archive to ftp2.cyberspy.com? It's a copy of
-Justin's old archive site, and has a few new things on it.. so why
not
-stick all your stuff on there too? Just a thought.
-
Main reason I don't is that a lot of it would be duplicates, and I
want the archive in a certain format. (i.e. working, no disks that
have 4 or 5 games on it). I got all my stuff from FTP so its all out
on the net; Since the sysadmin at cyperspy doesnt have to pay for
space, if he'd front me an account I'd gladly run the ftp for him and
clean it up a little bit. (You'll notice that I did u/l titles from
w-z).

If you're using APE then you need no utility. Just use your PC HD as
a mirror disk (press s and then 2) and you can copy or load the file
wherever you want including a newly created ATR image.

I am posting this again, I have had several offers for this stuff, but this has been going on for over 1-2 years now! I NEED TO SELL THIS STUFF ASAP!!!!!!

People make offers, so I hold the items for them, and wait, and wait, and wait, and the money never comes, neither does an email response..

The ATR8000 - A guy offered me over a year ago, $100.00 for it, never heard from him after I said to send it...
Then a guy in Canada offered $120.00 to include shipping, after 2 months he forgot about it, and changed his mind...
Had another guy offer $100.00 for it and $35.00 for the 1050, it's been over a week and nothing.....

MAKE ME A REASONABLE OFFER!! I have to get rid of this stuff!!!!!!!!!

I have a $100.00 BID on the ATR8000, and $35.00 on the 1050 drive....

Included with the 1027 printers is also about 10-12 Ink Rollers for them, which Atari sold at $7.95 per ink roller, and most palces had discount for $3.95.......

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center,

both printers cost new $399.95 each, asking $100.00 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. To Lawrence,

Thank you for adding all those improvements to your very useful utility program. I always use XFSIO v 1.03 to launch PC-XFormer.

I downloaded the XFSIO.ZIP v 1.05 on Friday (6/28). The .ZIP file contains a text file for all your improvements. BUT, the .EXE file appears to be the earlier v 1.05 file. If you have a chance, take a look and see.

Thanks,

Happy Computing, from Doug Feldman in Ann Arbor, MI

ok, I finally snagged a copy of Kermit-65(thanks to Toad Hall BBS in Boston) and it works fine. But...the documentation is a 'little' technical. All I want to know is: how to get a file from my VAX account to my Indus GT drive. I've gotten as far as telling the vax to send a file but can't get things sorted out on this end. since all I've ever owned are atari 8bit machines, this stuff is a little new to me so please forgive my ignorance. I'm sure and answer to this will seem pretty simple after I've done it a few times.
thanks,
randy.

I had a progam that would display useful info about your BB's status.
Namely the HD write protect and printer mode switch status', and (I
think) the max sectors for the installed hard drives. this latter
might have been incorperated into another similar util. Any one have
these? I probably still have them around somewhere, but can't find
them (having a 120 meg HD is not all it is cracked up to be... :)

Thanks for any help!

Rick

4131. FS: Various old and new Atari hardware for sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-29 00:00:00 UTC
From: <>
Message-ID: <4r2fu0$jnr@hume.nmia.com>
Source record: 82648
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

Hello all,

Well, it's time to get rid of all the things from the closet. Here are the
things that I found:

Atari 800 -
48K RAM
Atari 800/400 Carts -
Miner 2049er
Assembler Editor
Basic (2 of, why I don't know)
Pacman (just the board out of the case, not sure if it works)
Atari 410 Tape drive
Various manuals
Various 5 1/4" floppies (I doubt anything is remaining on them and no
longer have the disk drive)

Atari 520ST -
Upgraded to 1 meg RAM
Case is in bad shape, but it works.
TOS V1.02 (I think this is right, it was one of the originals)
Atari DS 3 1/2" floppy drive
2 Atari SS 3 1/2" floppy drives
Monochrome monitor
Color monitor
Various 3 1/2" floppies (again who knows)

Atari Falcon -
Small problem with the keyboard. Part of the circuit is
broken on the motherboard. I fixed it by re wiring
the circuit. It works fine now.
85 MB internal hard drive
16 MB RAM upgrade (I might want to keep these SIMMS)
Original 4 MB RAM board
Original manuals and S/W floppies
ICD Pro SCSI software

I even have original packing for a lot of it (talking about a pack rat).

If you want anything above just send me mail and whatever you would like to
pay for it. I'll even consider that you just pay shipping charges. I'll
check to make sure the things work before sending. Everything above was
working the last time I tried. Just name your terms...

More information on anything by request.

Take care,

George

>Haven't been able to locate one that has the proper pin-outs for Atari's.

Almost all 5-pin din to rca cables that I've come across use pin 2 for
ground. So you can use the cable for at least the signals that the
particular cable does bring out. If all else fails, make your own!
It is really a simple task. Radio Shank has all the parts you will
need, for relatively cheap. They may even have a fully assembled
5-pin din to 4 rca cable, as this was and may still be a part they
carry.

4134. Sio2PC/APE cable

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-29 00:00:00 UTC
From: eru@sover.net
Message-ID: <31d4e565.14401758@news.sover.net>
Source record: 82651

Which version of the cable is most reliable, the one chip version or 2 chip? When I built mine, I chose to use the two chip method, because at the time the one chip was getting bad reviews here, but recently I have seen a swing in the opposite direction. I have been away from my Atari for awhile, (for shame, for shame!! :) and need to know if there is a new one chip version, and where I can get the schmatics. My cable is "acting up", that is when I try to write a file from the pc to the atari's disk, the program (APE) will CRASH!!! (Sio2pc just hangs, and doesn't like my cable at all) this never happened before. Both the latest version of ape crashes as well as the "d" version I had had before. Otherwise APE works as well (better) than my indus. Also in my system (130xe) is a Black Box(I don't know if this makes a difference, shouldn't). the host 'puter is a pent-133. Any and all input recieves my gratitude!

Rick

I have the following Atari 8 bit game disks for sale. All have
instructions $ packaging.

SUPER BOULDERDASH Electrronic Arts $4
TOUCHDOWN FOOTBALL " $3
PINBALL CONSTRUCTION SET " $5
MOVIE MAKER " $5
ARCHON 11: ADEPT " $4
REALM OF IMPOSSIBILITY " $4
SEVEN CITIES OF GOLD " $3
FIGHT NIGHT Accolade $4
HARDBALL " $3
GREAT AMERICAN CROSS-COUNTRY ROAD RACE Activision $4
JULIUS IRVING AND LARRY BIRD GO ONE-ON-ONE Electronic Arts $3
THE PRINT SHOP Broderbund $8
THE TRIVIA ARCADE Screenplay $4
WIZTYPE Sierra $3
MICRO LEAGUE BASEBALL $4
LEADER BOARD Access $3
COMPUTER QUARTERBACK SSI $3
THE HALLEY PROJECT Mindscape $5
TYPESETTER Xlent Software $4
RUBBER STAMP " $4
MINIATURE GOLF " $3
EPIDEMIC SSI $3 (instructions only)

Thanks for looking.

Steve

Atari never released the 1090XL, and I think it was ditched
before PC compatibility became an issue. Don't forget this was way back
in 1983. Perhaps you're thinking of the ATR-8000 which could run CPM and
had an add-on board that allowed it to run MS-DOS.

4138. Leer discos Atari en un PC. Como se hace eso?

De lo que recuerdo de hace mucho tiempo (y algo que busque en la red
para poder contestarte con fundamentos y programas):

Los diskettes formateados con un DOS Atari (2.5 el standard, o MyDos
4.5x) pueden tener diversas densidades.

Total Bytes/ Total

Disk Format Tracks Sectors Sectors Sector Bytes Kbytes

Single Density 40 18 720 128 92,160 90 Kb

Dual Density 40 26 1040 128 133,120 130 Kb

Double Density 40 18 720 256 184,320 180 Kb

Ademas estan los diskettes formateado con el SpartaDOS. Algunos de los
cuales tienen densidad compatible (pero difieren en la manera de
asignar la VTOC (equivalente a la FAT en PC) y la estructurad de datos
de los sectores)

Bueno, sucede que con excepcion del formato "DUAL" que es un hibrido,
las disketeras Atari y las PC se comportan de manera similar!.

Si tienes la suerte de tener una disketera 1050 (las de color cafe
con crema) modificada para trabajar con "doble densidad", puedes
trabajar directamente con SpartaDOS doble densidad 40 tracks y single

sided. (creo que las disketeras grises (xf???) permiten la doble densidad sin modificaciones, que alguien lo confirme, plis)

1.- Existe un programa llamado "Sparta READ" que trabaja directamente en una disketera de 5 1/4" en el PC y puede manipular los archivos de un diskette formateado en una disketera atari de densidad doble.

2.- Formateas disketes de 5 1/4" en formato de 360 Kb en el PC. Llevas ese diskette preparado a la disketera Atari modificada y grabas los archivos como si estuviera formateada en Densidad doble (el formato de 180 Kb). Lo que sucede es que Atari ocupa la primera mitad de cada track (o pista). Hecho esto, puedes usar el programa "Util" (o Myutil) para manipular los archivos en el PC.

PERO... y si NO tienes una disketera de Doble densidad en Atari?

1.- Formatea (en el PC) un diskette en densidad doble pero creando un disco de 180 Kb (40 tracks; 18 sectores/track; 256 bytes/sector; 720 sectores) Lee el manual del PC-DOS o usa algun utilitario.

Puedes usar MULE que es un set de 2 programas: Uno para el Atari (MULE.COM) y el otro para usar en el PC (MULE.EXE)

En el Atari, copia el archivo que quieres transferir a un 2° disco vacio (en cualquier formato). Se copia de a 1 solo archivo por vez. Corres MULE.COM y sigues las instrucciones, 1° lee este disco intermediario y luego lo transfiere al disco especialmente preparado (MULA)... el disco... ;)

Una vez copiado el disco, MULA; en el PC cargas el programa MULE.EXE y sigues las indicaciones. Por defecto te pide un 3er disco para copiar el programa, pero puedes modificar eso en le codigo fuente para que lo escriba directamente al disco duro.

(UFF! Complicado no?, Es mas sencillo hacerlo que decirlo. Pero que emocionante es cuando aparece casi magicamente el texto o el programa en el otro sistema "incompatible")

Pero, todavia hay otra forma de leer diskettes Atari directamente en el PC. Y es bastante mas sencilla.

Tomas un diskette preferentemente de densidad simple o doble y tratas de leerlo con un excelente utilitario, que lee cualquier cosa (ANADISK v. 207) y tratas de "recuperar" el bloque de sectores que contiene el archivo de Atari. Lo salvas a un archivo "imagen" (todo siguiendo los menues del programa).

Luego usando otro programa llamado DeANA (diana) transformas ese grupo de sectores recuperados en un archivo, que si es de datos lo puede usar directamente en PC, y si es binario lo podras correr en un emulador.

La gracia aqui es del Anadisk, que permite leer discos CPM y varios formatos "raros o inhabituales" y luego del Deana que basicamente rota

los bits de cada byte del archivo y lo deja legible para el PC.

Todo esto no es nada nuevo, algunos de los programas tienen casi 10
a&#65533;os. Recuerdo haber leido incluso diskettes de densidad dual, pero
solo los primeros tracks y luego la disketera empezaba a zapatear con
un ruido infernal. Ahora sacrifque el slot de la disketera de 5 1/4
para el CD-ROM asi es que no puedo confirmar todos los detalles.
PAra eso he puesto las URL en donde podras encontrar los programas
mencionados.

Ahora lo malo.
Puedes encontrar dificultades como:
Si quieres copiar archivos de un tama&#65533;o mayor de 26 o 30 sectores (no
recuerdo bien) deberas modificar el codigo fuente de Mule (en el atari
y en el pc, escritos en Action y en C respectivamente). Al usar el
metodo del anadisk es conveniente traspasar discos llenados
secuencialmente y no diskettes en los que se haya borrado y vuelto a
escribir encima (por lo de la fragmentacion de los archivos) Conviene
conocer la estructura de de los sectores del formato con que estas
trabajando (es diferente en DOS 2.5 que en Sparta DOS, uno tiene 125
bytes de datos y 3 bytes de direccionamiento y encadenamiento, el otro
usa 128 bytes de datos por sector con tablas mas parecidas a las FAT
del PC)

Dependiendo de lo que quieras hacer, puede que todo esto te interese o

te resulte una soberana lata. Por el contrario, esta ha sido para mi
la verdadera diversion.

Todo esto no tiene ninguna otra razon que el demostrar que con
paciencia y busacndo "casi" todo se puede hacer.

Por ultimo debo decirte que los emuladores son una curiosidad
romantica y una forma entretenida de perder el tiempo.

Mi mejor y mas practico "emulador" sigue siendo mi viejo y fiel 800XL
que desempolve esta semana y volvio a trabajar igual que antes.
...

Ahora me he dado cuenta que necesito traspasar una enorme cantidad de
software desde el PC hacia el Atari! Y no tengo disketera...!!

Es hora de empezar a construir alguna conexion en reversa con cables e
interfaces del tipo SIO2PC, XFormer, APE etc. (acabo de destripar el
cable da la cassettera para empezar ... ;))
...

Puedes encontrat los programas mencionados en la siguiente URL:

One thing about Warner, they never intended the 8-bit computer to
be much more than a fancy game system. They never intended it to become
the cult classic it became. Had they or the Tramiel's even known what
they had, Atari could have really been a major force in the computer
industry. They could have at least been as big as Apple ever was. Just
some very short sighted people not knowing what to do with a great
product.

Jay, Absolutely. Some are better than others. There are a few 800/800XL and 130XE emulators. XL-It, and PC Xformer are two and there are probably more. These two actually run the programs on the PC as if the PC was an actual 8-bit Atari computer. There are other systems that allow you to use your PC hard drive as disk space for you 8-bit (both machines must be connected together via special cable for this). These include SIO2PC and APE.

4143. Atari 8bit New Developments?

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-30 00:00:00 UTC
From: BobKlaas <bobkla19@mail.tcd.net>
Message-ID: <4r4smm$4jd@news.tcd.net>
Source record: 82530

Are there any Hot Shot die-hard 8-bit programers out there that would be interested in updating a couple items for the Atari 8-bit? Pay?, hehe if the development sells you profit as much as I do for your efforts..

I own a couple things Software Source Code and a Hard Ware Interface..Hard Back and Restore could use an update, drive 9 is now avaiable through Sparta Dos X33a and X33b (b) is the dos I would prefer using along with any other modifications the programer would be interested in doing...???

Everyone wants an IDE interface for the Atari 8-Bit, no one other than Wooley has come up with it, Bob Wooley told me a couple years ago when I sent him the KPI Hard Drive interface and Source that the interface could handle the project.. He has been too busy to do anything?...Tom Hunt told me a couple of years ago that the interface would also handle CD-ROMS but nothing has been developed in THAT area either. This is the old Supra Hard Drive interface, will do SASI and SCSI MFM type drives.

Any Serious takers will draw up a letter of agreement relating to the release of Source Code and Schematics for the Hard Drive interface...Looking for someone who is serious and interested in a NOW project, not a 3year down the road maybe???? (Been there done that!)...

My background, have been repairing Atari 8bits since the early 1980's, Atari authorised a service center here using my setup, oked the Retail store as a service center with me doing the repair. I am not an authorised repair center on my own and the store has gone out of business years ago, owner had cancer and passed away. I have continued to repair units inexpensivly for school districts, and individualy. I have never intentionaly screwed anyone nor do I intend to at this point.

I may be a little (Lot at times) out spoken, but am reasonable and can and will work with those that agree to work with me. I have dealt with the public for the last 38 years in another field and can mix in just about any enviroment. I have access to unlimited travel can go anywhere in the world provided I have the time.

I have been seduced by programers in the past, turned over specific items, spent $$ to have items built, they (programer) in turn got burnt out. One specificaly refused to return the test items I had built to his specifications, stating the MAIL or UPS

lost them and refused to have them traced. Later I found out
from a friend of both that the individual never returns
anything..If the language in the agreement seems a little strong
then I hope you understand why it reads this way.

Any takers???

Bob

Source record: 82533

Well heres a question for all you guys.

Ive tried (twice now) to build an APE cable. Ive followed the directions to the letter on the home page instructions, and then even dug up some other docs from another source.

No matter how I build it, I always get similar results from APE. When attempting to load the MYDOS image that comes with it, itll sound like it reads 3 or 4 sectors and then just dies on me (8 bit stops booting).

Other disk images have different results, but all of them fail. I get lots of hex data on the APE screen, but it just fails.

Does this sound like a cable problem or a timing problem? I use a Pentium 133 with this, and a 256k 800XL.

Also, can someone whos recently built the cable (successfully) point me exactly to the info they used to build it?

Thanks guys,

Joe Kearney

Hello Joe,

I have had two experiences with the APE cable. First, I can tell you that the APE cable diagram for the 1489 chip is correct. It will work as given by Steven Tucker on his APE 109 home page. I have purchased the registered version of APE 109. Anyone who uses the DEMO version after 30 days should purchase it. IT IS EXCELLENT. IT MAKES YOUR ATARI FLY!!

I tried to build one myself and found out that my connecting skills were really not very good. I found all the parts I wanted at Radio Shack, fo runder $15.00 including 4-wire cable. I used one of my old Atari SIO cables. I could not get my 1489 kit to work. Finally, I got some help from Steven Tucker. He agreed to check over my cable if I paid the postage. He found that I made one wiring error and some of my other contacts were very close together and very pretty.

During the time Steven was fixing my first 1489 cable, I decided to try again and make a better, more 'mature" effort. I followed the 1489 diagram exactly and made sure all the colors were connected properly. I used tiny little solder-dot connections instead of "gross" wire wrap + solder connections. This second cable worked immediately !! What a thrill!!

The other important thing is to make sure you have the COM PORT identified properly. Steve told me to "zero out" the other 3 unused COM ports. Make sure you know the exact IRQ and hex address for your chosen COM port. If you are using any type of 9-pin to 25-pin converter, make sure it is not just for a mouse. The mouse uses some different pins than a APE cable.

What other trouble-shooting have you tried so far? I hope this helps or at least gives you some hope? Don't give up. It will be worth it.

Happy Computing, from Doug Feldman in Ann Arbor, MI

4154. Analog magazines with floppys

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-30 00:00:00 UTC
From: jmarine@dorsai.org
Message-ID: <4r6oog$671@amanda.dorsai.org>
Source record: 82541

I have three Analog magazines dates June, July and August 1989 in mint condition. With the floppy disks that came with them. the disks were never used. Will sell all three for $30 obo. You can contact me at: jmarine@dorsai.org or by phone at 212 595-1680

4155. rom images

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-30 00:00:00 UTC
From: Louis Loizides <demos@tiac.net>
Message-ID: <31D67691.7653@tiac.net>
Source record: 82542

I really like classic video games, but my ATARI isn't hooked up
at the moment. Actually, I don't like it 'cause it's too new (XE gaming
system w/ keyboard and built in BASIC and diag software - I'm only 15,
so it's kinda impossible for me to have anything older). I downloaded
some emulators (xf252 and xl-it) and some rom images, but they won't
work. Does anybody know where I can get some compatible ones and some
names of really good archives. Please respond to my E-Mail address, not
to this newsgroup. Thanks.
(demos@tiac.net)

---Louis---

P.S. No matter how fancy these new games get, there's
always something special about classic Atari games.
It might have something to do with the fact that
they're usually programmed by one person only.

P.P.S. Can I get the images onto disk for my old Atari?

4156. Atari joysticks on a Mac running Rainbow?

Newsgroup: comp.sys.atari.8bit
Date: 1996-06-30 00:00:00 UTC
From: rsalerno@linet01.li.net
Message-ID: <4r6tnl$brn@linet06.li.net>
Source record: 82543

Is there a way to connect Atari joysticks to a Mac? I'm running Rainbow and being able to use the joysticks would be great.

>keeping your maoney and you are never getting the goods you ordered!
>For real folks check out his emails!!!!

Thanks for the warning. I was communicating with him to purchase the ATR
and the 1050, though I ultimately decided against it because of his
attitude. This is good to know -- thanks!

Ferret is Latin for "little fur thief". "Little fuzzy fearless klutz
that hides valuables" apparently takes too long to say in Latin.

I know there is an FTP or kind soul out there who can help me and other worshippers of Chris Lam and his magical Rainbow find REAL 5200 ROM images for use with this terrific Emu. Anyone?
